About us?

"I believe it's our values that define the direction of our strides thus, I hail to say that our values are the reason for Kanpur Plastipack's success. Comprised of culture to treat employees as family & customers as Gods."

Mr. Shashank Agarwal

Dy. Managing Director

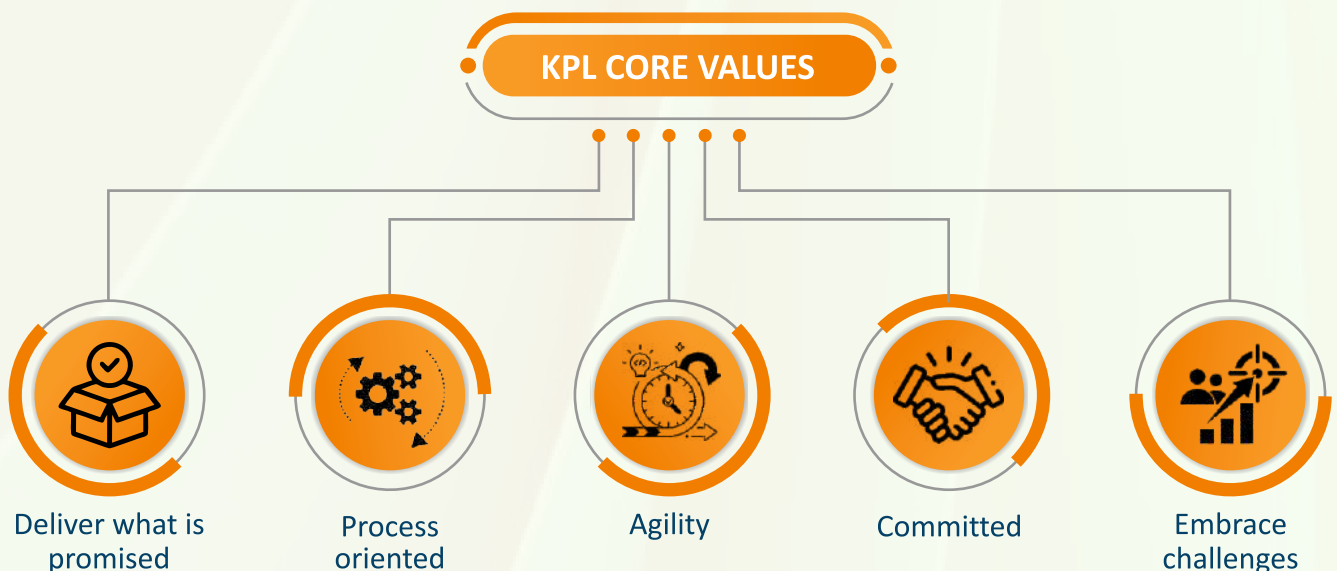

Kanpur Plastipack Ltd (KPL) is one of India's most reputable manufacturers of industrial bulk packaging products. Our product range includes Cast Polypropylene (CPP) films, Flexible Intermediate Bulk Containers (FIBCs), PP Multi-Filament Yarn (MFY), UV Masterbatches, Fabrics, and more.

"Our present deeds guarantee the achievability of our VISION"

"Our vision is to enhance the lives of business communities through technologically advanced packaging solutions and a value-driven partnership."

"Our mission is to inspire, innovate and bring forth a tangible change in market leadership through customer satisfaction and global partnerships."

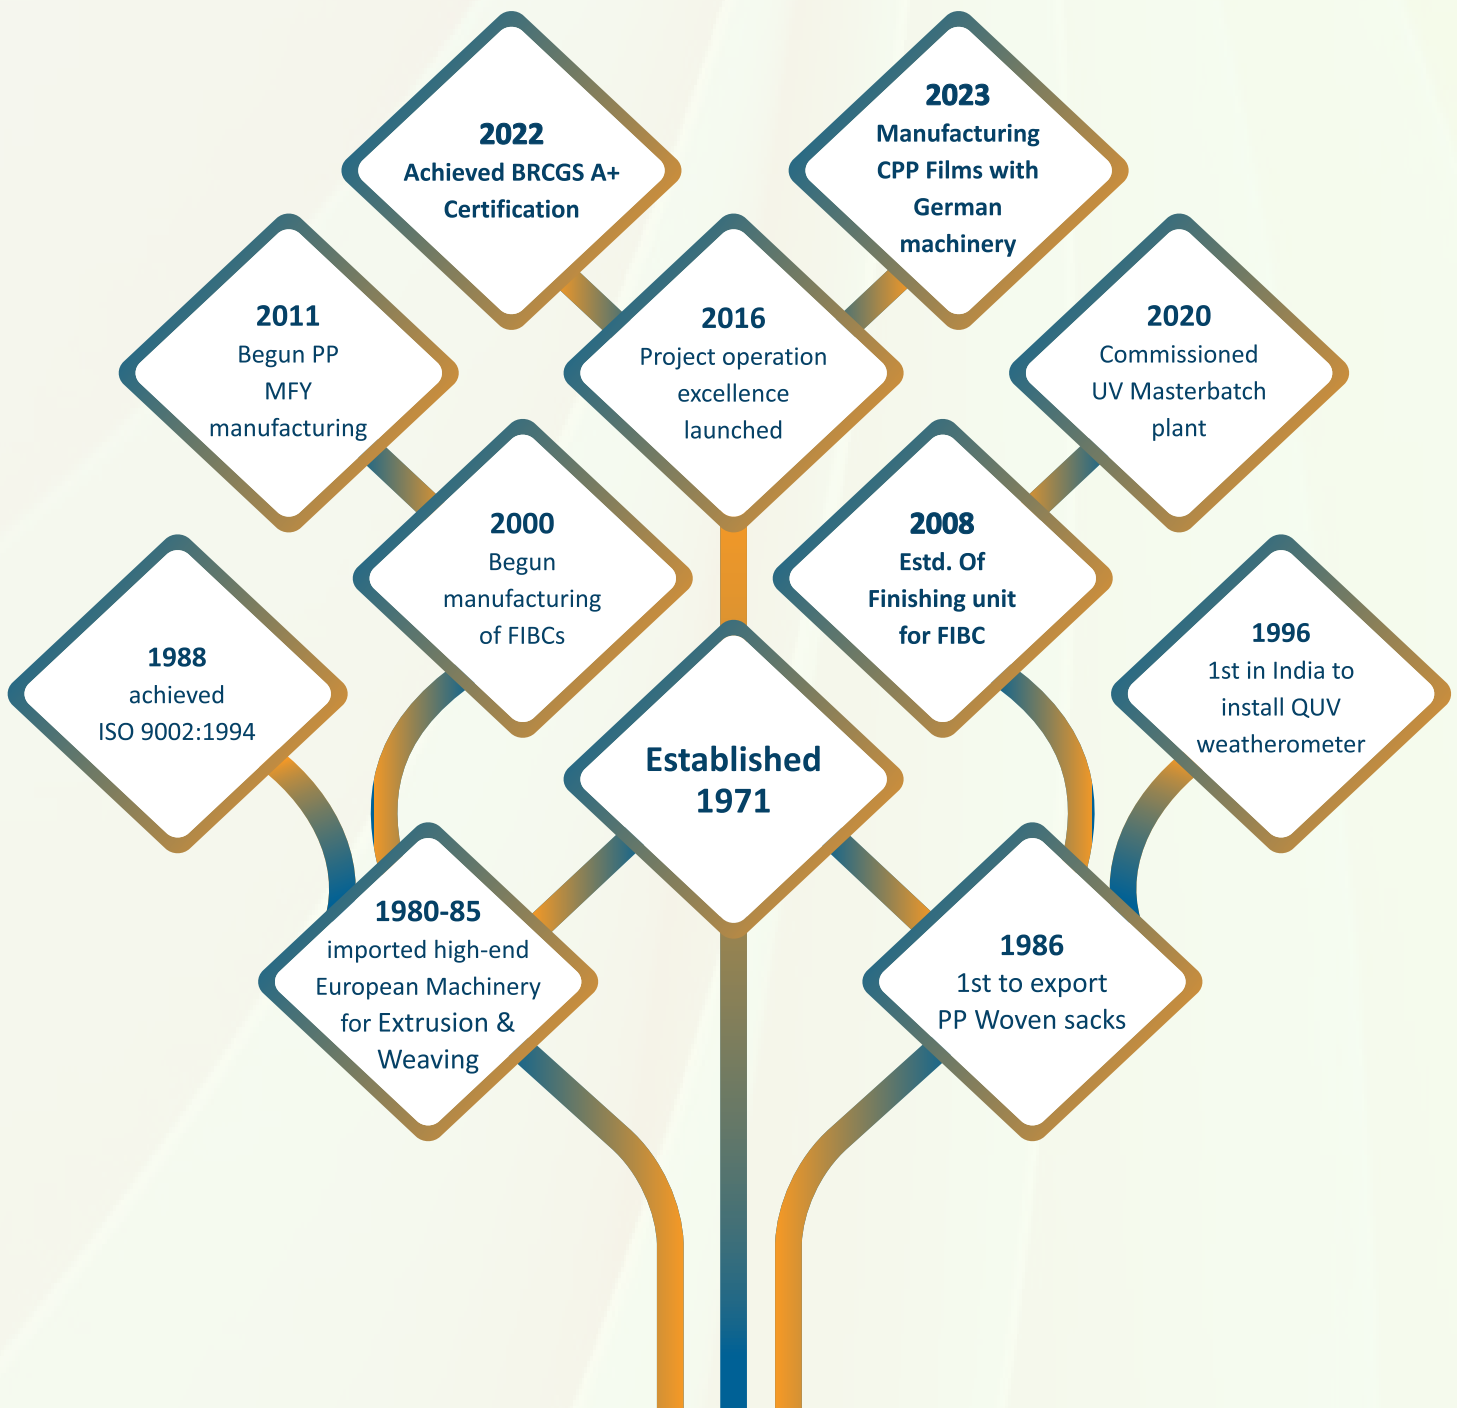

History & Milestones

With over **50+ years of experience** & being a **100% fully vertically integrated** company, imparts immense advantages to us thus we have the unparalleled capability to offer you our products like **Cast Polypropylene (CPP) films**, Flexible Intermediate Bulk Containers (FIBCs) & PP Multi-Filament Yarn (MFY), UV Masterbatches, Fabrics and more.

A Glorious History

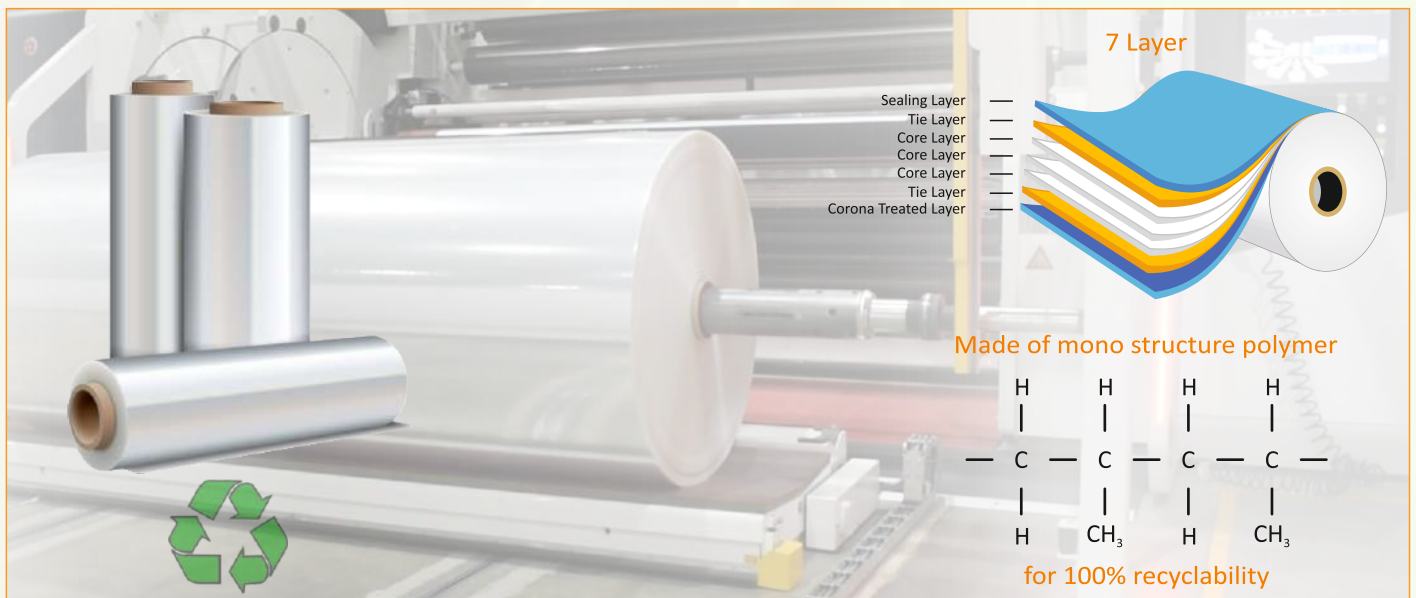

Paving the way for a promising future

Putting the Cause before Business!

In the plastics industry, the most vaunted & emphasized topic is how to achieve “Sustainable Growth” amid the growing awareness about the harmful effects of plastics on nature. However, like every liquid isn't noxious likewise every plastic isn't harmful to nature*.

Undoubtedly, there is no equivalent substitute to plastics however, plastic polymers like Cast Polypropylene a 100% recyclable polymer with numerous applications and a perfect substitute for non-recyclable plastic polymers like Polyester, Polyethylene, and Polyvinyl chloride to in various applications.

CPP film, i.e., cast polypropylene film, is a transparent, un-oriented film made from polypropylene. It is made of semi-crystalline polymer made from propylene monomers, which are connected by carbon-carbon single bonds which makes it more sustainable than other types of polymers because they are easier to recycle.

In the world of flexible films, the lamination of BOPP with Polyester has been a trend pervasive for a long time & it's harmful to the environment because of its non-biodegradability. However, laminating BOPP with CPP film i.e., multi-layered plastics (MLP) serves the same purposes in a better way with 100% biodegradability. It also helps us to fulfill our Extended Producer's Responsibility or EPR goals.

Overall, the combination of excellent optical properties, sealing capabilities, barrier properties, toughness, and cost-effectiveness makes cast polypropylene films a preferred choice for a wide range of packaging applications.

The 100% recyclable properties of the CPP Films closely align with our commitment to the environment & were the core reason for us to begin the manufacturing of the Cast Polypropylene Films as we firmly believe cause comes before business

Cast Polypropylene (CPP) Film

Cast polypropylene film generally known as CPP Film is utilized all around in packaging products. CPP is turning into a more famous and enticing packaging material for many types of products contrasted with other packaging films. Our product range incorporates transparent, low SIT, metalized, opaque, retort CPP films. We use FDA certified granules in making our CPP films which are safe for food packaging.

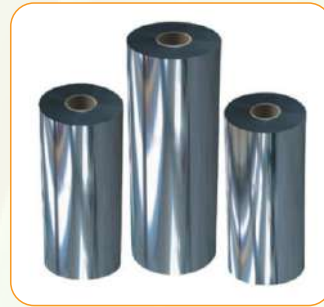

Types of CPP films we produce:

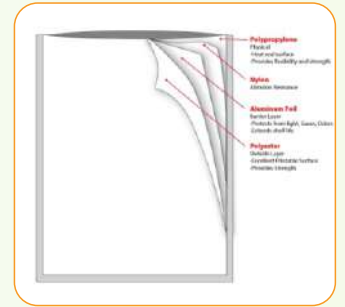

**White/Opaque
CPP Films**

**Transparent
CPP Films**

**Metalized
CPP Films**

Specialty CPP Films

- Low SIT - High bond
- Retort
- Medical Grade
- Antifog
- Peelable
- Holography
- Flower Wrap

Our product range is renowned for its high rigidity, gleaming metallic appearance, and superior optics. These are perfect for beverages, cosmetics, health care, and pharmaceutical items because they have strong active moisture resistance.

Benefits of CPP Films

- Superior thermal stability
- Superior puncture resistance
- Superior clarity
- Tear resistance
- High barrier qualities
- Excellent heat seal strength
- Great heat resistance
- Extremely transparent
- Excellent packing integrity

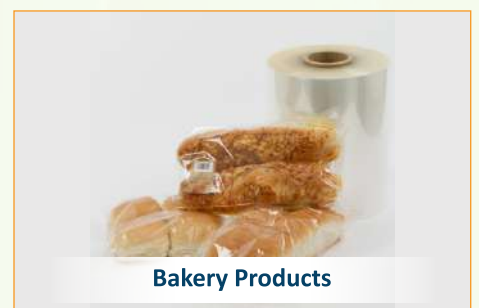

Applications of CPP Films

Food wrap or candy

Confectionary packaging

Bakery Products

Medical grade Film

Retort packaging

Stationary packaging

Why Choose us?

Manufacturing CPP films with cutting edge German machinery, thus providing CPP films with unparalleled quality at a reasonable price. Showcasing you a glimpse of our machinery:

PLANT: Windmüller & Hölscher Filmex II Cast Film Line

It provides us high Efficiency with 100% Integrated Automation & Control. Resulting in excellent layer consistency for the best sealing and metalizing results and fantastic Transparency & Gloss. Besides this it offers us best-in-class MD and TD thickness tolerance

METALIZER: Applied Materials High Vacuum Web Coating System TOPMET

- ▶ Nexus-E® technology integrated in Top met 3250 has
 - (i) To optimize surface treatment
 - (ii) Providing exceptional bond strength of the vacuum deposited
- ▶ Aluminum layer whilst reducing defectivity
- ▶ Ensures Best Quality

SLITTER: Altas Cw800

- ▶ Most Vaunted Slitter in the Industry.
- ▶ Adaptable Secondary Slitter Rewinder.
- ▶ Single Station Center Winder.
- ▶ Excellent Control Mechanism ensures highest finished quality product.
- ▶ Fault Diagnostic System thus, least down time

Committed to Customers

Manufacturing with High-end German Machinery

Recipe & Specifications for customized solutions

7 Layers

Small Order Runs

Fair Pricing

3.3 Meter Width

On Time Delivery

Financial Stability
