

Contents

1	Introduction	1
2	Related Work	5
2.1	Position-based Routing	5
2.1.1	Greedy forwarding	7
2.1.2	Face Traversal	7
2.1.3	Graph Planarization	9
2.1.4	Beacon-less routing	11
2.1.5	Position-based Multi-path Strategies	12
2.1.6	Geographic Clustering	12
2.1.7	Location Services	13
2.1.8	Related Online Routing Problems	14
2.2	Routing in Faulty Networks	14
2.3	Online Problems and Performance Measures	14
2.4	Online Navigation and Searching	16
2.4.1	Navigation	16
2.4.2	Searching and Exploration	18
2.4.3	Maze Traversal Algorithms	20
2.4.4	Complexity of Labyrinth Problems	21
2.5	Robot Motion-Planning Algorithms	21
2.5.1	Online Planning in Continuous Environments	22
2.5.2	Motion Planning in Grid-based Environments	23
3	Position-based Routing using a Cell Structure	27
3.1	The Network Model	28
3.2	Proactive Versus Reactive Information Dissemination	29
3.3	The Cell-based Geographic Forwarding Protocol	31

3.3.1	Establishing the Cell Structure	31
3.3.2	Cell-based Routing	38
3.4	Equivalence of Network and Cell Structure	44
3.4.1	Distributed Route Construction	47
3.5	Conclusion and Outlook	48
4	Online Routing in Faulty Mesh Networks	51
4.1	Basic Definitions and Techniques	52
4.1.1	Barriers, Borders and Traversals	53
4.2	Comparative Measures	53
4.2.1	The Competitive Time Ratio	54
4.2.2	The Comparative Traffic Ratio	54
4.3	Lower Bounds	55
4.3.1	A Trade-off between Time and Traffic	56
4.4	Basic Strategies	61
4.4.1	Lucas' Algorithm	62
4.4.2	Expanding Ring Search	62
4.4.3	Continuous Ring Search	63
4.5	The Alternating Algorithm	64
4.6	The JITE Algorithm	65
4.6.1	Overview	65
4.6.2	Fast Exploration	67
4.6.3	Slow Search	71
4.6.4	Time Analysis	72
4.6.5	Traffic Analysis	80
4.7	Conclusion and Outlook	85
5	Summary	87
	Bibliography	89
