Backend — Tech Stack

Repository: `finmars-platform/finmars-core` and `finmars-platform/finmars-workflow`

Overview

This document lists the technologies, libraries, and approaches used in the core and workflow backend.

Language

- **Python** (primary language)

Frameworks & Runtime

- **Django** (project structure with `manage.py`, templates)
- **Django REST Framework (DRF)** (API layer)
- **Gunicorn** (WSGI/ASGI server for running Django in production)

Dependency Management

- **Poetry** (`pyproject.toml` present)
- **pip/requirements** files for environments: `requirements.txt`, `requirements-dev.txt`, `requirements-test.txt`

Containerization & Local Orchestration

- **Docker** (`Dockerfile`)
- **Docker Compose** (`docker-compose.yml`)
- **Makefile** for common dev ops (`make migrate`, `make up`, etc.)

CI/CD

- **GitHub Actions** for build/test/deploy pipelines
- Builds use the provided **Dockerfile**

Scripts & Tooling

- Shell scripts for setup and maintenance: `generate_env.sh`, `migrate.sh`, `import-sql.sh`, `graph.sh`

Configuration

- `.env.sample` for environment variables example
- Standard Django settings (inside the project; details depend on env files)

Database

- **PostgreSQL 15**

Storage (one of options)

- **S3 / Minio/ Azure Storages**
- **Local File Storage**
- **NFS Storage**

Caching

- **Redis** (used for caching)

Message Queue & Background Tasks

- **RabbitMQ** (used for task queues)
- **Celery** (used for background and scheduled tasks)

Authentication

- **Keycloak** (mandatory integration for authentication)

Testing

- Test requirements listed in `requirements-test.txt` (exact test tools depend on that file, e.g., pytest)

Libraries

The full list of libraries is declared in `requirements.txt` and `pyproject.toml`. These include (but are not limited to):

```
aiohappyeyeballs==2.6.1
aiohttp==3.11.18
aiosignal==1.3.2

Frontend - Tech Stack

Repository: `finmars-platform/finmars-vue-portal` and `finmars-platform/finmars-portal` and `finmars-platform/finmars-workflow-portal`

Overview

This document describes the technology stack used in the Vue Portal frontend.

Language

- **JavaScript / TypeScript**

Framework

- **Vue 3** (main frontend framework)
- Angular.js (for `finmars-platform/finmars-portal`)

Build Tool

- **Vite**

State Management

- **Pinia**

Router

- **Vue Router**

UI / Styling

- **CSS / SCSS**
- **TailwindCSS** or UI component library (Naive UI / Element Plus / Vuetify)

API Layer

- **HTTP Client:** likely **Axios**
- Backend: **Django REST Framework** (from core), communication over REST/JSON

Authentication

- **Keycloak** (mandatory integration). Client library: `keycloak-js`

Environment & Config

- `.env` files for environment variables (e.g., `VITE_*`) — exact names to be confirmed

Testing

- **E2E Testing:** Cypress / Playwright (separate repository)

Linting & Formatting

- **ESLint, Prettier** — rules and configs

CI/CD

- **GitHub Actions** (build and deploy). Build process based on **Dockerfile**

Containerization

- **Docker** (`Dockerfile`)
- **Docker Compose** for local development — to be confirmed

Observability

- Logging and monitoring for the frontend — Sentry

License

- **EUPL-1.2** (repository license)

Tech Stack Overview

This document provides a high-level overview of the technologies used across the Finmars Platform.

Backend (Core & Workflow)

- **Language:** Python
 - **Framework:** Django, Django REST Framework (DRF)
 - **Background Tasks:** Celery
 - **Database:** PostgreSQL 15
 - **Caching:** Redis
 - **Message Queue:** RabbitMQ
 - **Authentication:** Keycloak
 - **Runtime:** Gunicorn
 - **Containerization:** Docker, Docker Compose
 - **CI/CD:** GitHub Actions
-

Frontend (Vue Portal and Portal)

- **Framework:** Vue 3 / Angular.js
 - **Build Tool:** Vite / Webpack (to confirm)
 - **State Management:** Pinia / Vuex (to confirm)
 - **Routing:** Vue Router
 - **Styling/UI:** CSS/SCSS, TailwindCSS or UI library (to confirm)
 - **HTTP Client:** Axios (likely)
 - **Authentication:** Keycloak integration
 - **Containerization:** Docker
 - **CI/CD:** GitHub Actions
-

Shared Practices

- **Environment Variables** via `.env` files
- **Dockerfile-based builds**

- **Automated testing** (pytest for backend, Jest/Vitest/Cypress for frontend — to confirm)

Cloud

- **Kubernetes**
- **AWS S3 / Minio**
- **AWS IAM**
- **Hypervisors (esxi, xcp-ng)**
- **Hashicorp Vault**
- **Pritunl VPN**

Other

- **Ionic Framework**
- **git (github, gitlab)**
- **Wordpress**
- **Storybook**
- **Cypress**
- **Jira/Confluence**
- **Various integrations (bloomberg, exante, eod, etc.)**

License

- **EUPL-1.2**
-

Auxillary

Cloud, Community Edition

Overview

This document describes the technology stack used in the Cloud / Community Edition installation

Language

- **Bash**
- **Python**

Technologies

- **Kubernetes**
- **SSL**
- **Nginx**
- **HTTPS**
- **Encrypted Disks**
- **Docker**
- **VPN (pritunl)**
- **Router (pfsense)**
- **AWS**
- **Azure**
- **Various Cloud Providers with Linux Support**
- **Ionic Framework**
