

## 1. Study Context

Why is this study important?  
What are the study objectives?  
What has been done already?

## 2. Study Design

What is the population of interest?  
How was the population sampled?  
What are the variables of interest?  
How are the variables measured?

## 3. Study Results

Conduct the study as per design.  
Measure variables as per objectives.  
Present results.  
Assess reliability of results.

## 4. Interpretation

How do we interpret the results?  
What are implications on research?  
What are implications on practice?  
What are implications on education?
