

I have two Preset Profiles saved :

Preset Profiles

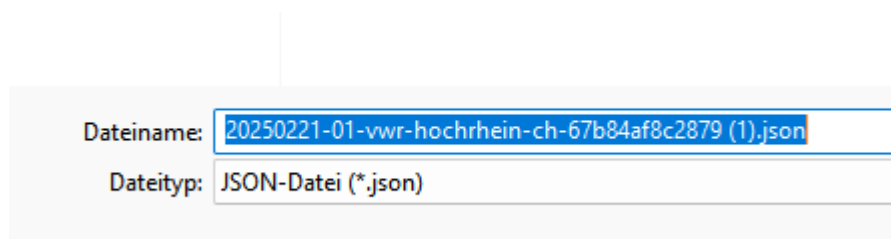

Choose Preset to load configuration

The screenshot shows two preset profile cards. The left card has an orange header with the number '2', the text '20250221_01_vwr-hochrhein.ch', and a purple 'Load Preset' button. The right card has a light blue header with the number '2', the text '20250801_01_vwr-hochrhein.ch', and a purple 'Load Preset' button.

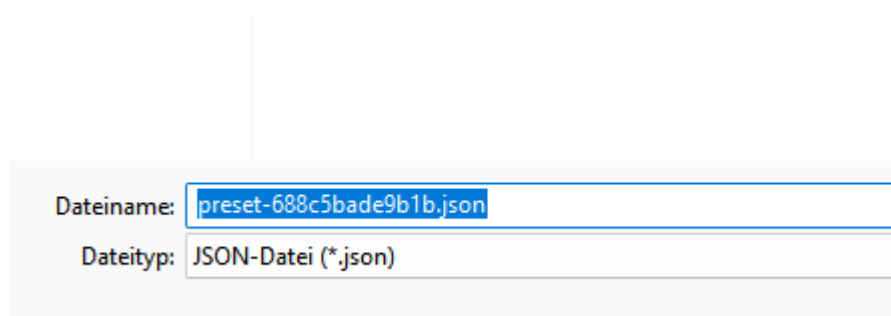

The first one (20250221...) before Version 3.3.0.

When i save this, the name for file will building with this name (from field title: 20250221_01_vwr-hochrhein.ch):

The dialog box shows the filename '20250221-01-vwr-hochrhein-ch-67b84af8c2879 (1).json' and the file type 'JSON-Datei (*.json)'.

The second one Profile was building under 3.3.0. When i save this, the name will building with this:

The dialog box shows the filename 'preset-688c5bade9b1b.json' and the file type 'JSON-Datei (*.json)'.
