The highest incidence of autism is with

- DTP vaccines
- RV vaccines
- HEP B vaccines
- MMR vaccines

- Rotashield is the Rotavirus vaccine
- Infanrix combines DTP, HEP, HIB vaccines
- Prevenar is the Pneumococcal vaccine
- MMRVaxpro is the MMR vaccine
- Gardasil is the HPV vaccine
- Proquad combines MMR and Varicella vaccines

So the top 7 drugs associated with autism (out of 13,000 drugs) are all vaccines, and are on the childhood vaccine schedule.

The government pushes on with these dangerous vaccines simply because -

1. They don't care for people or for truth
2. It's lucrative
3. It is problematic to oppose pharma

This is confirmed by VAERS data - [Safety Signal](#)

Infanrix hexa combines vaccines against 6 diseases [namely Diphtheria, Tetanus and Acellular Pertusis (whooping cough), Hepatitis B, inactivated Poliomyelitis and Haemophilus influenza type B] in a single vaccine.

You can see in the table above that DTP, HEP B, and Haemophilus B each have a high incidence of autism. Infanrix combines them all together into a single vaccine !

Dr Puliyel analyzed the data and found that 97% of deaths (65 deaths) following Infanrix hexa , occur in the first 10 days and only 3% (2 deaths) occur in the next 10 days. Had the deaths been coincidental SIDS deaths unrelated to vaccination, the numbers of deaths in the two 10 day periods should have been the same.

The manufacturers of this vaccine GlaxoSmithKline (GSK) disclosed in a confidential report to the Regulatory Authority that about 72 babies died within 20 days of receiving Infanrix hexa. They reported that the deaths of these children were due to Sudden Infant Death Syndrome (SIDS) and Sudden Unexpected Death Syndrome (SUDS) unrelated vaccination. However an Italian Court of Justice Nicola Di Leo ordered that it be made public and is now available on the internet (<http://autismoevaccini.files.wordpress.com/2012/12/vaccin-dc3a9cc3a8s.pdf>)

Analysis of the data shows that at least 69 out of 72 deaths reported were likely to have been caused by the vaccine.

<https://web.archive.org/web/20201115201131/https://www.greenmedinfo.com/blog/new-vaccines-still-cause-autism-and-our-government-knows>

The British government added to the infant vaccine schedule a Hepatitis B vaccine, as one component of GSK's controversial hexavalent vaccine Infanrix Hexa which also includes DTaP, polio and HiB. Additional to this a two month old infant receives rotavirus vaccine, 13 strain pneumococcal, and Meningitis B vaccines.

Given that many of these vaccines are associated with autism and cognitive impairment in both VAERS and EUDRA data, this is a "slaughter of the innocents".
