

V-Safe Free-Text Data

Dream effects of the COVID Jab ?

by Craig Paardekooper

Following a judgement imposed upon the CDC, they have been forced to release the data contained in the free-text input fields of their V-Safe vaccine surveillance system. These fields are the only place where the vaccinated were able to specify their symptoms. So far, 780,000 free text reports have been released, in two batches each of 390,000 reports. This data reveals some interesting things ...

A curious phenomenon has been noticed – namely the incidence of extremely vivid, lucid dreams after the injection. There are more than 1000 such reports. Many of these dreams have a nightmarish quality and involve night terror.

Vivid dreams are dreams that are hard to distinguish from reality – so they have the quality of an alternate reality. They seem to occur at the boundary between waking and sleeping – when the two merge. It is possible that the jabs are weakening or breaking down this boundary, and thereby exposing the recipient to a form of psychosis – to the “night-side of nature”.

Whether the dream content merely reflects internal damage caused by the jabs, or an independent spiritual reality can only be determined by an assessment of the dream contents. Unfortunately, V-Safe data does not provide a detailed description of the dream narratives – though we can glean further clues by examining the reports.

Interrupted sleep and bizarre dreams.

Lumo in my throat weird dreams.

Yesterday, I woke from a nap completely disoriented and had to ask questions of my family to explain specifics of my day up to that point. **I remember things boy did not know if I had dreamed it, or if it had occurred.** This morning, I woke up disoriented and had to take a few minutes to reconstruct what day it was, and what had happened the day before. Only this morning did I wonder if it might be connected to the vaccine. It felt like "brain fog."

Weird dreams every night since vaccine

Weird dreams

Not last night but the night before my left eye felt like it was under an immense amount of pressure, while I slept, so much so that it woke me up...but then it went away. It seemed it was only a minute or so that it hurt but I've never had that before....since then last night I didn't feel it again..may have just been a fluke...or a maybe an odd dream.

Last 2 night tossed and turned all night with multiple wake ups and weird dreams

Vivid dreams

I did not get an alert to check in the past two days. But would like to add that my headache persisted into Sunday, stopped by Sunday afternoon. I believe I took 4 full doses of extra strength Tylenol over the course of the weekend. My baby, who is exclusively breastfed had a couple vomiting episodes the evening feeding after coming home from work. He developed a diaper rash on Saturday and we are still treating it (this is Tuesday). I also didn't realize strange / vivid dreams could be a side effect. That occurred Friday into Saturday. I also had tenderness under my armpits - had a prior dx of HS (mildest stage, just under arms) - last flare was in 2017. The tenderness gave me pause to think I might be having another one but there was not a lump, just tender to touch.

DISCUSSION

A CAUSAL RELATIONSHIP :

A causal relationship to the vaccine seems certain due to a consistent temporal relationship. These dreams are induced by the vaccine. Therefore the COVID vaccines must be altering brain function to a degree that is sufficient to produce these extreme experiences !

AN ALTERNATE REALITY :

If the dreams are caused by physiological conditions engendered by the jab, then it is natural to assume that the dream content is merely the product of damage. However, a peculiar feature of these dreams is their vividness, detail and realness – in other words, they present themselves as an “alternate reality”. Hence their lucidity and detail makes them more difficult to discern from waking life.

So is this the perception of an alternate reality, or just the product of a damaged brain? Only a detailed study of the dream contents will enable us to know. For this, we need to gather the dream narratives (perhaps in a Telegram group).

A POSSIBLE MECHANISM :

Whilst a fever psychosis caused by brain malfunction is a ready explanation, we might also consider that the dreamers may actually be tapping into something real. If the vaccine induces an inhibition of analytic thought (brain fog) then this could release the mind – allowing it to experience other forms of cognition and perception.

So, does the jab open up a gateway to “the other side”? If it does, then physiological injury may be accompanied by spiritual interference. The answer lies in the symbolic content of these dream experiences.

I should note here that the COVID jab is also associated with dissociation, olfactory hallucination and tinnitus. Such symptoms may be related to this dream phenomena.

UNIQUENESS :

The oddity is that such dreams have not occurred with other vaccines. And these hellish dream experiences are surely curious, considering the cult-like devotion with which these vaccines are being pushed.
