

HPV Vaccine and Infertility – a “catalogue” of safety signals

By Craig Paardekooper

Data Source : [Safety Signal](#)

Here are the lower confidence interval scores for a “catalogue” of reproductive system disorders associated with the HPV vaccine. Here I am looking just at the HPV4 vaccine as an example. The number is the number of times the incidence of the symptom exceeds that of the average for the 99 other vaccines.

PRR for “Intra-uterine death” (Still Birth)

Vaccine	Lower Confidence Limit of Proportional Reporting Ratio
FLU(H1N1)	119.51214309877504
FLUX(H1N1)	64.84091168923767
HPV4	12.359486796229232

Notice that the HPV vaccine generates a very strong safety signal – only exceeded by the “Bird Flu” vaccine.

PRR for “abortion spontaneous”

Vaccine	Lower Confidence Limit of Proportional Reporting Ratio
FLUX(H1N1)	6.347802438349588
FLU(H1N1)	5.371089967698373
HPV4	3.714420117033533
HPV2	3.067774030033997
HEPA	1.469260304455296
COVID19	1.208403317108976

Notice that the HPV vaccine generates a very strong safety signal – only exceeded by the “Bird Flu” vaccine.

PRR for “Infertility female”

Vaccine	Lower Confidence Limit of Proportional Reporting Ratio
HPVX	43.96757532653614
HPV9	16.02293091102979
HPV4	15.805214181302444

Notice that ONLY the HPV vaccine generates a very strong safety signal.

PRR for Blood HCG Negative

Vaccine	Lower Confidence Limit of Proportional Reporting Ratio
HPV4	84.73949396714859

HCG negative means a woman is not pregnant, but why should the incidence of this be 84 times greater with HPV vaccines compared to other vaccines??? Notice that ONLY the HPV vaccine generates a very strong safety signal.

PRR for Urine HCG Negative

Vaccine	Lower Confidence Limit of Proportional Reporting Ratio
HPV4	60.49281796207685

Notice that ONLY the HPV vaccine generates a very strong safety signal.

Here I am just looking at one of the HPV vaccines, HPV4, as an example. The number is the number of times the incidence exceeds that of the average for all other vaccines.

All of these are SAFETY SIGNALS by the accepted criteria of WHO and CDC, yet this information is suppressed.

Smear cervix abnormal	259	Premature menopause	22
Cervical conisation	234	Foetal disorder	19
Vaginitis bacteria	188	Complication of delivery	19
Colposcopy abnormal	163	Neonatal disorder	17
Cervical Dysplasia	147	Infertility female	15
Anogenital warts	125	Labour complication	15
Cervix carcinoma stage 0	93	Caesarean section	14
Blood HCG Negative	84	Chlamydial infection	14
Biopsy cervix abnormal	71	Breech presentation	12
Failed trial of labour	61	Intra-uterine death	12
Urine HCG negative	60	Premature labour	12
Menorrhagia	53	Polycystic ovaries	12
Adenocarcinoma of the cervix	34	Vaginal lesion	9
Metrorrhagia	29	Ovarian cyst	8.8
Ovarian failure	27	Pelvic inflammatory disease	8.2
Cervix disorder	24		

The CDC and FDA declare this vaccine “safe” for pregnancy !

It’s obviously profitable to generate such a huge list of aberrant conditions in erstwhile healthy women. If the treatment of each condition earned a hospital even \$1000, can you imagine the income stream?
