

V-SAFE Reports with Symptom Keyword = BLEEDING

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

Data

Data Source : V-SAFE (CDC) : download (June 2024) @ <https://icandecide.org/v-safe-data/>

Total number of V-Safe reports with symptom keyword BLEEDING = 1716

Percentage of V-Safe reports with symptom keyword BLEEDING = 0.09429 %

(V-Safe) Total number of Covid <<vaccine>> recipients with this symptom = 1423

(V-Safe) Percentage of Covid <<vaccine>> recipients with this symptom = 0.13023 %

Limitations

This report shows the incidence of a symptom amongst a <<vaccinated>> population of 1092715 in the V-SAFE database. The onset of a high incidence after <<vaccination>> suggests possible cause - requiring further investigation of - 1) Other databases, such as VAERS and EUDRA, 2) Clinical literature and scientific papers.

I asked a medical doctor friend to look at the mole that was bleeding.

What I believe is my left supra clavicular lymph node is swollen and has been for the past few days. This is on the same side of the arm that I received the vaccine. Additionally, a mole on my left arm about 1-2 inches from the site of vaccination peeled off and started bleeding about 1 week after receiving the vaccine. Also as a note, this was all after the first dose of the vaccine.

It was not today, but I forgot to report this earlier. I am a dentist and do not have any bleeding in my gums when I brush or floss, EXCEPT that this occurred on Saturday January 9th, 1 day after receiving my 1st COVID vaccine. It was generalized throughout my mouth, every gingival papilla was affected equally, and my gums felt swollen and tender the entire day. This was after my usual home care regimen, nothing changed. Same toothbrush, toothpaste and floss, and same frequency of home care morning and night. I have not had gums bleeding in at least 15 years, and not to that degree since I was a junior high school kid in braces and not brushing or flossing very much. I thought this was a notable side effect that as a dentist, I was in a unique position to observe and report. It is consistent with the current vascular/endothelial inflammation model of this disease.

bleeding : Case 776: ID Y2Y-10286-59349

Had a CT Scan with contrast yesterday. Last night there was a lot of blood on the bandage covering the catheter injection on my arm. I usually hardly bleed at all from injections. Also, blowing my nose moderately will cause some bleeding. I do this during allergy season (April-June) as well. Don't know if either of these events is related to the vaccine shot.

Might be unrelated, but I did notice a change in my menstrual cycle. My cycle ended three days before getting the vaccine, but two days after getting the vaccine, I had vaginal bleeding again that is still continuing. Again, it could be unrelated. I am currently using nexplanon for birth control, I dont know if that could have an effect either, but it is atypical for me to have vaginal bleeding immediately after completing a full (6 day) menstrual cycle.

I am hesitant to report this because it sounds insane; but with my first vaccine, 1 hour after, I started my period 2 weeks early which is highly unusual for me. Weird coincidence and couldnt be connected, I thought. Today I was prepared in case my cycle is now off track and it has technically been 28ish days. No pms/cramps etc like I always have as a warning and again, minutes after my vaccination, started my period with incredibly increased volume and an unprecedented lack of symptoms before. Again, there is no rational way a vaccine could almost immediately induce heavy uterine bleeding. Its illogical but its such an odd correlation, in case its happening to any other women, I thought I should mention it. Its the most bizaare potential bodily stress response I could imagine

Im suspicious that the medical attendant did not actually give me the shot. I didnt feel the needle go in. He did not put a band aid over the injection site. He said it did not need a band aid since it was not bleeding. I did not find anything that looked like a puncture site on my arm. Im wondering if I was tricked into thinking I was vaccinated and actually did not get the vaccine. Im wondering if I should get tested to see if COVID 19 antibodies are present in my blood?

I want to say that for my previous vaccination I did not feel the solution going into my arm and did not watch it. It makes me feel as if I did not get the vaccine. This time my muscle/skin was pinched before the injection and had some bleeding. I can see exactly where it went in. The last time I could not find a mark where it went in. Last time I said I had some pain there but that could have been from weight training. It was blue when I touched my arm and took my fingers off that it felt like a bruise. No movement of my arm caused pain. I had not slept the previous two nights so I was tired. I also have headaches often but decided I should report it.

Upon conferring with some peers and fellow healthcare providers, I concluded that my symptoms were vaccine related and wanted to report. For both doses, for the first three days following, I experienced moderate to at times severe uterine cramping as well as moderate vaginal bleeding with passage of blood clots. This is abnormal because I have had an IUD in place for 2 years and have not experienced any periods or vaginal bleeding, nor have I experienced similar camping (even pre-IUD with a normal period). This is concerning to me and other women I've spoken with who have had similar experiences.

20 minutes after shot, I experience intense dizziness that left quickly. Then I sat in the car and my heart area felt tight, and then my chest. Breathing was a little off. This was brief then fatigue set in which came and went throughout the day. A dull headache started as well. I was surprised to see my arm still freshly bleeding at the injection site 8 hours later.

bleeding : Case 1586: ID 9SW-14944-50939

When administered the IM injection the medication ran out with lots of blood. I have been a RN for 39 years and the gentleman did not use proper technique and probably hit a vein and or injected medication into it. I am on no medication other than synthroid. The amount of bleeding took a 4x4 to clean up. I do not think any of the Med stayed in the muscle etc!
Should I get tested for antibodies in 2 weeks?

I put down redness but its really a brown bruise. On Sunday I touch the area and it bruised. It probably bled a little bit. I am on Pradaxa. Theres no more bleeding from the area and the bruise is starting to lighten. My only concern is that well it have any effect on the vaccine working the way it supposed to with a little bit of bleeding that took place by touching it. Could you let me know that theres no problem with the effectiveness of the vaccineFrom the little bit of Bleeding. The bruise was about an inch and a half in diameter.
