

V-SAFE Reports with Symptom Keyword = FLARE

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

Total number of V-Safe reports with symptom keyword FLARE = 3063

Percentage of V-Safe reports with symptom keyword FLARE = 0.1683 %

(V-Safe) Total number of Covid <<vaccine>> recipients with this symptom = 2484

(V-Safe) Percentage of Covid <<vaccine>> recipients with this symptom = 0.22732 %

Limitations

This report shows the incidence of a symptom amongst a <<vaccinated>> population of 1092715 in the V-SAFE database. The onset of a high incidence after <<vaccination>> suggests possible cause - requiring further investigation of - 1) Other databases, such as VAERS and EUDRA, 2) Clinical literature and scientific papers.

flare : Case 132: ID LEJ-18435-10756

Flare up of HSV (rash)

flare : Case 133: ID 233-22721-29228

Oddly my hands are peeling, when nothing has changed in my hand washing, soap, hand sanitizer, or winter lotion routine. Noticed one finger the first days after vaccination but today it turned to sloughing my whole hands. Haven't had a space to report it here but the first two nights my pre existing neuropathy in hands and feet was so flared and intense I couldn't sleep. Started in my R arm/ hand, where it's normally very mild in outside fingers

only, and moved throughout and to other limbs. Inflammatory process made sense to me given the vaccine doing its job, so other than being tired, I didn't worry about it. My hands also felt tight and subjectively swollen through the night, but was gone by morning and never objectively visible. I'm fine, but it's definitely odd.

flare : Case 134: ID HHK-94235-66868

ââ nauseating, debilitating pain night of vaccine & next day, not as severe today

flare : Case 176: ID FWF-30618-50860

Still warm at injection site. Last night pain on backside of shoulder at tip of shoulder blade. Arm pain limits ability to lift arm. Injuries in left arm, injected arm, flared up. All way down into wrist and thumb. Glad I had OT today as (B)(6) understood what was going on and adjusted my OT accordingly. Oh - bruise at injection site. I am used to discomfort with flu and Prolia shots. Guessing the flare up in tendons, etc due to this shot. Still, I am very thankful for the vaccine. Thank you Dr Fauci and all the scientists who worked, and still working, to develop the vaccine. And, the frontline workers who so kindly administered it to me. Looking forward to second shot.

Today is day 3, I feel better today than yesterday. Day 1 (immediately after the shot) I experienced dizziness and pain in my right arm, Day 2 I had bruising at the injection site, extreme fatigue, diarrhea, continued neck pain and rash on my neck (I do have vitiligo cause by autoimmune disease) I believe the injection just caused a flare Day3 The arm pain still present along with fatigue, I have been using my steroid cream for the neck rash, which is calming it down Day 4: Feeling fair today, not as fatigued, the arm pain is still present but better today than yesterday, still have neck pain and rash and bruising at the injection site

When I was diagnosed with covid in July, my initial symptoms included swollen lymph nodes and severe leg pain. To this day, I still have leg pain, but since I received the initial vaccine on 12/29/2020, my leg pain is feeling as bad as it did when I actually had the virus. Almost debilitating to the point that getting out of bed will cause me tears. It feels like the vaccine flared up all my lingering symptoms.

I got my vaccine Tuesday, December 29th. I felt fine after getting it and went to work afterwards. I conducted a safety care training outside where it was pretty hot. That night I started feeling really lightheaded like I was going to pass out. It hurt really bad to breathe and was hard to get air in. And I had a small headache. I have asthma so I assumed that's what I was feeling. I went to the ER because the primary care doctor on call recommended it. The doctor at the ER told me it was just my asthma and I would be fine. He sent me without running any tests. When I got a second opinion from another doctor she said it might be best to not get the second shot since I had a really bad asthma flare up. I didn't feel ok until Thursday night. I'm completely ok now though. Thank you for allowing me to take the vaccine. I'm not sure yet if I will get the second shot but I'm very thankful for the opportunity and I'm still open to talking to someone from the CDC to get their recommendation on whether or not I should get the second shot.

Between the time I last reported and todayâ had to leave work, had and pain and diarrhea, max temp was 103 f. When I had received the vaccine had felt tingling sensation in my tongue after 15 minutes.. lasted for half an hour and then it was in my lips for another hour or so. Yesterday temperature spike if 103 after my report to u, cannot take nsaid as it triggers my asthma so took 0.5 mg dexa last night- that helped in addition to Tylenol.. had profuse sweating last night. Temp of 100 in am.. my asthma flared up yesterday as well.. it is all better now. Not sure if will take second dose. I did have symptomatic CoVid in dec 2020.. so wonder if that is what caused the intense response

Muscle/deltoid is very mildly sore today and also a bit swollen. It was like this the first couple of days after I got the injection. It may be because I started to do upper body exercises again and may have triggered that muscle to flare a bit. Very mild but just wanted it noted. Also, headache may possibly be hormone migraine and not related to the vaccine. I get them with my menstrual cycle either before or during and it is right before. Took migraine medication and headache is gone..

flare : Case 405: ID 7RJ-20456-75156

Immediately after when I was sitting down I felt extremely nauseous and began sweating profusely. I stayed probably ten minutes a little extra because I wasn't feeling well and didn't think I could drive. Once I started driving my neck and back muscles started tightening and hurting horribly. Then I got this feeling on the side of my injection side (left side) that felt like when you get an iodine contrast dye put into you...it was a cool numbing rush all over and then started going all over and I freaked out cause I was on the highway. I was eventually able to pull over and relax and get home. I then started feeling like âjelloâ and headaches etc. If I laid down they would settle down but any time I tried to move they would flare up. Joint pain was 2 days afterwards.

I have a hx of RA, I am not on any immunosuppressives. I have been having a lot of joint pain since the vaccine. I am not sure if this is weather related and coincidental or if the vaccine response has caused a RA flare up. This has not impacted daily ability to perform ADL's or hinder any usual activities except I have limited by times walking up and downstairs. I have not had any recent RA flares, prob has been 7+ years since I have experienced the current pain. Pain controlled with Motrin

flare : Case 593: ID ECM-86407-78203

I did not get an alert to check in the past two days. But would like to add that my headache persisted into Sunday, stopped by Sunday afternoon. I believe I took 4 full doses of extra strength Tylenol over the course of the weekend. My baby, who is exclusively breastfed had a couple vomiting episodes the evening feeding after coming home from work. He developed a diaper rash on Saturday and we are still treating it (this is Tuesday). I also didn't realize strange / vivid dreams could be a side effect. That occurred Friday into Saturday. I also had tenderness under my armpits - had a prior dx of HS (mildest stage, just under arms) - last flare was in 2017. The tenderness gave me pause to think I might be having another one but there was not a lump, just tender to touch.

flare : Case 721: ID HGX-20492-47232

Felt very flushed an hour or so in. A hot type of flush, temp was only 99.3. I am immuno comprised and a severe asthmatic. I happened to start a Rheum flare yesterday, so a little spicy with the temp, nothing out of the norm. The flushed feeling did not last long. Longest issue was feeling pretty fatigued. Otherwise, I feel good and thankful.

(b)(6), has anyone getting the covid vaccine mentioned joMy hip hurts, much worse walking. In the past since rocky mountain spotted fever I have occasional joint pain knees or hip (travels-think is periodic inflammation) which steady ibuprofen for a few days usually controls. It started in my hip about 5 days after the first covid shot, was almost gone when I got the second one Monday. Worsened again that evening and so far this time ibuprofen is only partially helping. Trying to decide if is coincidence or the shot made it flare up.

Symptoms started a few hours after injection Aggravation of sciatic nerve on left leg. A flare up of a previous injury (burning and tingling sensation) Tenderness in left buttock results in shooting pain and numbness down the leg from any applied pressure. (As if nerve was sitting just below surface) Tenderness centralized on glute maximus unable to attend without nerve pain for now than 30 seconds. Which resulted in burning and numbness sensation shoot from glutemead down through calf. Advil / Tylenol not as much help as before. Leg throbs and pain/burning subsides minutes after I lay back down leaving a general achiness behind constantly. Overall hypersensitivity of sciatic nerve, certain positions reduce all pain to dull baseline throbbing but any movement after flares of issue. 30+ hours after sciatica pain reduced to back off knee and glut maximus but still cannot stand pain frees

I keep forgetting to answer this part. I have PSA & take Humira. I stopped it 8 days before getting the vaccine & will resume taking it on 1/24, 8 days after my vaccination. During this time I experienced a flare up with lesions on my fingers, hands, feet, & outer ears. I had a similar response when I received the new shingles vaccine 9/20, so I anticipated this could arise. I wanted to be sure to inform CDC since people with compromised immune system cannot be part of studies. I want to help in anyway I can, so I am willing to discuss anything further. I take Humira for chronic uveitis. After I took my first shot I ended up with a mild flare, which has never happened before while I was on the Humira. I thought it mightve been a coincidence until I took my second shot and suddenly the steroid drops for my eye were not working at the current dosage and I had up the drops to three times a day. No proof that its related to the shot specifically, but that would be two flares to two shots while on my Humira which has never happened.

Cough. Some shortness of breath. I do have asthma. I did notice that I had no asthma symptoms before I took the shot. After the shot I have had breathing issues and had to use my rescue inhaler at least once per day. A friend of mine who also has asthma and received the shot on the same day is having asthma flare up also since the shot. It is not so much as to need to go to the doctor or hospital, but it is noticeable. I just thought I should report it.

Explaining the above: I had a modest flare up of psoriatic arthritis pain in my right foot yesterday, which persists into today, but this is fairly common and random for me, so it may not be related to the vaccination. I had just the tiniest possible bit of diarrhea last night, when passing gas produced a tiny bit of wetness a while after a normal bowel movement; that's unusual for me.

I have several co-morbid health conditions-advanced osteoarthritis, fibromyalgia, and CRPS- most likely the vaccine exaggerated my regular symptoms and I have been having bad pain flares for over a week. Today was very intense and radiating down my arm, hard to use my hands, severe pain in neck, back, shoulder, tingling arms and hands, nerve pain. Unable to function much today. Hard to tell how much is related to vaccine when I have preexisting pain and fatigue issues but today was the worst pain I've been in in several months. been

This vaccine shouldn't be given to anyone w any autoimmune disease like me. I haven't had any Lupus RA flares in years. The second vaccine through me into full blown very painful swelling to the point my skin was so tight it would bleed. I had rashes hives head to toe. I plan to tell everyone to never take this vaccine. I didn't know how long the flares would last. If I would lose my job bc I can't work during flares especially all 3. My diabetes killed in and my blood sugar kept dropping. It took 72 hours to feel less pain

I have Chronic Active Epstein Barr. When my body is in a flare up, the lymph nodes swell signaling to me that my body is fighting something. Today, one of the lymph nodes in my neck is swollen. Its not keeping me from doing what I need to do, it makes sense the its swollen if my body is trying to fight off something brought on by the vaccine. It could be a total coincidence, but I wanted to report it as I know people with CAEB are wondering how the vaccine will affect them.

All of the above have caused me to have a really severe Rheumatoid Arthritis & Fibromyalgia flare. I couldnt get up, couldnt get warm even with a heated blanket & was in unbearable pain & chills starting around 8pm last night and that continued until about 3-4am this morning. Pain was severe throughout my entire body - the worst pain of my life. My husband had to do everything for me - give me something to drink, give me medication, put socks on my feet, etc because I physically couldnt. Chills have subsided but still in severe pain, weak, severe fatigue, & nauseous.

The swelling only feels like a small bump at the vaccine site and I only notice it and the pain associated with it if I push on the area of the arm that received the vaccine shot. When i received the first dose I had the shot in my left arm, but this time I asked to have it done on my right arm since I am left handed and I suffer from prehypertension so that didn't help my pain level with the first dose and I even twisted wrong while lying down to rest and my back pain flared up from my degenerative disc disorder. I also decided to take ibuprofen today before getting the 2nd dose vaccine and so hopefully this is more helpful with any pain associated with the shot.

flare : Case 2010: ID 6AF-16451-11017

Since the first shot of the moderna vaccine, I have been having a lot of joint pain. It was very bad after the second dose and to the point I felt like my body was contracting into a large

cramp. It was especially bad at my hips, shoulder, feet and hands. All areas that have either injuries or arthritis. I'm pretty used to pain in those places but I think the vaccine increased my pain and has set me into an arthritis flare up.

I am a 53 yo WF diagnosed with lupus in my 20s. I wanted to share my experience with the second dose of Moderna vaccine. I received the second Moderna vaccine at 10:30 am February 8th. Around 5 pm, I started feeling unwell. By 9 pm I had an unbearable headache, neck pain, ear pain and jaw pain. I had overall stiffness and muscle/joint pain much like a significant lupus flare. Specific movement involving my left rib cage caused a stabbing pain

from the location of a healed rib fracture which occurred in January 2019. During that night, I slept little and struggled to adjust my head /neck position in hopes of finding comfort. I have cervical stenosis maintained by exercise but it felt like the nerves in my neck were being crushed. I recognized all of the symptoms as exaggerated reactions of inflammatory processes I had experienced over the past year. I have been on Prednisone for 10 years with 5 mg(my current dose) being the lowest dose. I took 10mg Prednisone around 2 am. Around 6 am, I had some relief through the use of heat and ice on my neck and slept for a few hours. I took 10 mg Prednisone twice more during the second day. I spent the remainder of the day in bed or on the couch with more bearable inflammatory symptoms. After sleeping all night the second night, I awoke still feeling groggy and at the same discomfort level. I feel more fatigue and weakness. On the third day I felt much better but had diarrhea twice.

flare : Case 2155: ID ZUB-21374-22390

Acute contralateral axillary lymphadenopathy. Went to bed last night at 1am. Woke at 3am from pain. Was awake with gradually decreasing left axillary pain until 10am. Several nodes were palpably enlarged on the lateral side of my chest, and painful to the touch. I slept from 10am to noon. When I woke up, pain was gone. Armpit feels like things are a bit swollen still, but no pain. Separately, my right hand remains palpably warmer to the touch than my left, though to a lesser degree. Continuing to have some low level numbness on my right forearm, wrist, and hand- it feels like what happens when my tendinitis flares, so Im assuming its from inflammation in the arm, and am not concerned yet.

flare : Case 2335: ID DDV-22999-96114

Ive had mild shortness of breath for the last week or so - it feels like an exacerbation of mild intermittent asthma that has long been under control but suddenly flared up. Its not a very troubling symptom, but Im not sure whats causing it or whether its related to the vaccine. My blood oxygen is fine, my pulse doesnt seem higher than normal, my temperature is normal, and I otherwise feel fine, except for this new shortness of breath.

flare : Case 2336: ID 9S3-64375-82852

Its not a symptom with me, but, I breastfeed, and I noticed about a week after my first dose my son had a flare of eczema (he doesnt normally get eczema but Im familiar with it because my daughter had bad eczema as a baby) . It resolved within a few days. Now today I noticed a new flare in the same location about the same amount of time as he didnt after I got the first dose. It my be just a coincidence, but I thought it was notable and that someone might want to record it.

flare : Case 2507: ID 8EA-25490-79457

My arthritis in my shoulder, which is not the one where I had the injection, flared up. It is very painful last night and today. Ive not experienced this much pain in the shoulder, so I think its some sort of a response to the injection. Also, after the injection, my face turned very red. It lasted for about three hours. Getting less red as time went on
