

V-SAFE Reports with Symptom Keyword = PALPITATIONS

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

Data

Data Source : V-SAFE (CDC) : download (June 2024) @ <https://icandecide.org/v-safe-data/>

Total number of V-Safe reports with symptom keyword PALPITATIONS = 5849

Percentage of V-Safe reports with symptom keyword PALPITATIONS = 0.32137 %

(V-Safe) Total number of Covid <<vaccine>> recipients with this symptom = 4585

(V-Safe) Percentage of Covid <<vaccine>> recipients with this symptom = 0.4196 %

Limitations

This report shows the incidence of a symptom amongst a <<vaccinated>> population of 1092715 in the V-SAFE database. The onset of a high incidence after <<vaccination>> suggests possible cause - requiring further investigation of - 1) Other databases, such as VAERS and EUDRA, 2) Clinical literature and scientific papers.

Since the vaccine, I've experienced intermittent bouts of heart palpitations without exertion. These were worse the 1st day after the vaccine, but have improved and been less frequent with each passing day. Also, if I don't take Ibuprofen regularly, my arm that I received the vaccine in really hurts; not just at the injection site, but radiates down to my hand and into my armpit. I'm really looking forward to the 2nd dose! ;)

I would like to report that on the evening I received the shot, I had heart palpitations. My heart rate dropped down to the upper 50s. I could not take a deep breath because the right up chest area hurted so much. The pain in the chest lasted for two days. By the 3rd day it

was gone. My heart rate went back into the 80s by the next day. The soreness in the upper left arm where I had the injection lasted for approximately 3 days. I am afraid to take the second injection. The palpitations were so bad until my family wanted me to go to the ER. I was afraid to go to sleep that night. I had a similar episode on Sunday night (1/3/2021).

I had to go to the emergency room for a fast, irregular heart rhythm which turned out to be atrial fibrillation. The physician thinks I have paroxysmal afib as I've had the same symptoms (palpitations) before. I got my 2nd dose on Saturday around 18:00. Around 25 minutes after my shot, I developed heart palpitations (my heart is pounding off my chest and heart rate was 109, my O2 sat was 98%. My heart remained that way all night. I went to urgent care on Sunday afternoon my blood pressure was 161/110 with headache, frequent chills, body aches, fatigue and shortness of breath with activity. My heart rate was 109-112. EKG done result was ok. I went home with no medication. My Covid test result on 01/11/2021 result is back today is negative. I also follow up with my primary doctor today because I still have on and off heart palpitations, shortness of breath with activities and headache.

I would like to report my symptoms after my injection, before I signed up for Vsafe. The day after my injection I was extremely fatigued. 24 hrs after injection I began feeling short of breath, my heart was racing & feeling palpitations, & felt extremely dehydrated. By that evening I had every symptom I experienced with Covid over Thanksgiving, including feeling winded, racing heart, ear ache, chills like with fever but no fever. Everything except I kept my taste & smell. That night I sweat through 4 t shirts & continued drinking a ton of water. The next morning 1/8 I woke up feeling fine and have felt fine since.

I received the vaccine on 01/13/21. When they gave me the vaccine I felt pressure in my chest and pressure in my head. I couldn't breathe very well and had to be coughing from time to time. Day # 2 (1/14/21) I continued with the pressure in my chest and a little cough, a lot of pain in my arm. Day # 3 (01/15/20) my chest feels better, I can breathe much better now, my arm still hurts. Day # 4 (01/16/21) today I woke up at midnight with palpitations and a bit of vertigo, I didn't feel very well, but half an hour later I felt better.

When I received the vaccine on the 15th I had heart palpitations and had to spend 30minutes with a nurse for monitoring; I continued to feel palpitations. The morning after I had chills and a fever of 104 despite 1000mg Tylenol. I was achy and fatigued with the a 10/10 headache. The fever broke after 4 hours and 2000mg Tylenol. I continued to feel awful. Third day very bad headache and fatigue/body aches. Fourth day mild headache. Fifth day back to normal, no complaints.

Shot site is still tender. I dont touch it just letting it dissipate. I believe it is more from the needle possibly hitting close to the bone initially, as it was a sore jab, like a punch in the arm from the needle. I have had daily episodes of heart palpitations - several per day. It is not long lasting and I simply breathe through it and drink extra water. I have continued to have minimal and decreasing episodes of hot flashes which come and go quickly.
