

V-SAFE Reports with Symptom Keyword = SEVERE PAIN

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

severe pain : Case 63: ID BRD-19815-74636

I had severe pain at the site of injection throughout the night, bad enough that it woke me up and kept me up from 1:30am to 5am when I went into the vaccination clinic to volunteer. During that time, it was difficult for me to do much of anything with my right arm including lift my phone due to the pain and weakness that I felt all in my right arm, it improved somewhat with 400mg ibuprofen. At work, I was not able to do much as I found it difficult to lift much, my range of motion was affected as well, anything strenuous would send sharp pain shooting up and down my arm, so I ended up leaving early, went home, took more ibuprofen and went to sleep. I recently woke up after approx 4 hours, my arm is still sore (not as bad as it was last night/early this morning), but enough that I feel I need another dose of ibuprofen.

severe pain : Case 146: ID PEQ-29148-94152

For the record, I dislike your categorization of mild, moderate, and severe pain. It's subsiding now, but I experienced some significant pain for the first 24 hours. I was forced to say mild because I could still perform my daily activities, but it was definitely more than "noticeable, but not a problem." Everyone else my age with a healthy immune system that has received the vaccine has said the same thing. As a healthcare worker, I worry that by using these categorizations and reporting that most people have "mild" pain, you will cause a lot of mistrust when people start experiencing significant pain. Just my two cents, but hopefully it gives you some food for thought.

severe pain : Case 257: ID 7D8-26389-94271

So around 30 minutes after the shot in my right deltoid my right upper buttocks felt like I had received a shot in it. Not kidding. Lasted most of the day. After I laid down to sleep I started having severe pain in my left hip. Nothing helped. 800 mg of Advil. Electrical stim to

that hip. 1000 mg of tylenol. I tossed and turned most of the night. In the morning it was gone. I haven't had any discomfort today.

severe pain : Case 258: ID MM8-10735-07571

For clarity, I responded to the first symptom check 15 minutes after getting the shot. This was a mistake because I was fine the first 12 hours, however, by the next morning, my upper arm was so painful that it was hard to move it. I took an Advil in the evening which helped but by 3:00 a.m. this morning, it hurt enough to disrupt sleep. Today it is better. I can move my arm without pain, but if I touch my upper arm, it still hurts. I'm headed the right direction and am optimistic that I will be pretty okay by tomorrow. So I'm really reporting on three days: Wednesday when I got the shot and was fine, Thursday when I had severe pain in my arm, and today (Friday) when I am improving but still feeling localized moderate pain.

I am in severe pain right now. Got a sharp pain in my back about 2 hours ago when I bent over to put clothes in the washer. I do not know if this is related to the moderna vaccine. I took 2 extra strength tylenol at about 4 50 pm. It hurts to walk. I can hardly stand up. The pain feels like menstrual cramps , but I have been in menopause for about 3 years. I have had other health issues that this could be related to. Just had emergency surgery for scar tissue and bough obstruction in August 2020; but was cleared as completely healed about a week and a half ago. Yhe pain is in my center lower back and extremely debilitating.

After the first injection I had bad pain at the injection site that impeded movement of my arm. When I got the second injection I used CBD ointment on the site once or twice a day and I have not had any problem this time. I have had some cough and wheezing unsure if this is related to the vaccine or not. Also after both injections some of my arthritic joints swelled right up and I had severe pain. And it lasted at least 24 hours. I did take some Tylenol as well as some CBD oil both of which help reduce the symptoms and the swelling. I'm adding this here because I forgot to give this information before

Still have some itchyiness today.I never got a follow-up data information to share on the first day of the injection. Two years ago I had DVT Blood Clots in my Right Leg and Extensive Multiple Bilateral Pulmonary Embolisms which required Experimental Emergency Thrombolysis Surgery with tPA. On Tuesday, about 5 minutes after my COVID-19 Moderna injection, I experience severe pain on the posterior of my right leg above the knee bend and left of my hamstring. There was severe pain for about 10 minutes then it went away. About 2 hours later, on my right leg (the same leg) where I had the DVT blood clots 2 years earlier, I experience major pain to the right quadricep area for about two hours then it went away. Please have someone contact me from the CDC by telephone at (b)(6) because I feel it should be reported about the side effects I experience as being a DVT Blood Clot survivor and Pulmonary Embolism survivor. Today the galloping whack a mole itchyiness is about 95% gone now. Thank you,(b)(6)

My Dr. of Internal medicine. My primary care physician

I woke up on Thursday the 10th of Feb with severe pain in upper right shoulder and lots of swelling from shoulder at arm to my neck. The pain and soreness was severe. I went to Dr and she believes the injection may have triggered inflammation. I just know I have not been able to do my everyday housework, cant sleep due to pain and nothing helps. Any feedback on this would be greatly appreciated! Thanks

The muscle pain refer to the arm where I got the vaccine. Please note, in my last 2 check-ins, I misunderstood the q "Have you had any of these symptoms where you got the shot (injection site)?" to mean if I experienced any symptoms immediately after receiving the shot, while still at the vaccination site. So I'd like to let you know that on the day I got my 2nd pretty quickly I started feeling rather severe pain in the arm, which continued at equal intensity the next day, and today it's still present but at a much lower intensity.

The worst night of my life . Shaking uncontrollably severe pain fever and chills. I could not stop shaking. Worst than what I experienced with Covid . I was crying I wanted to go to ER but I can breath so I just stuck it out. And now the headache and soar arm and barely able to walk seems to be my issue. I feel better a little. It was a nightmare and I'm very angry the. Doctors and cdc are not explaining that the first 24 hours can be for some people severe . Not everyone experiences this but still they should warn people. I feel better but I got my

ass kicked and I still feel pain just not as severe and no sleep. Im going to try to sleep. WOW fever to 101 even (b)(6) stayed up to 3:30 in the morning helping us. What a nightmare.
