

V-SAFE Reports with Symptom Keyword = SIGHT

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

Data

Data Source : V-SAFE (CDC) : download (June 2024) @ <https://icandecide.org/v-safe-data/>

Total number of V-Safe reports with symptom keyword SIGHT = 2603

Percentage of V-Safe reports with symptom keyword SIGHT = 0.14302 %

(V-Safe) Total number of Covid <<vaccine>> recipients with this symptom = 2488

(V-Safe) Percentage of Covid <<vaccine>> recipients with this symptom = 0.22769 %

Limitations

This report shows the incidence of a symptom amongst a <<vaccinated>> population of 1092715 in the V-SAFE database. The onset of a high incidence after <<vaccination>> suggests possible cause - requiring further investigation of - 1) Other databases, such as VAERS and EUDRA, 2) Clinical literature and scientific papers.

None. Just wondering if anyone had any insight on my initial symptoms. I had a bit of a head rush just after receiving the vaccine. Thought I would get a headache but never did. My main concern was the subtle feeling in my throat, like there were 2 little nodules that were swollen. No difficulty swallowing or breathing. Happened after leaving the hospital and ended about 1 hr 15 min after receiving the shot. Questioning as to whether it is still safe to receive the 2nd vaccine and what kind of protection dose the one dose offer. Thank you

sight : Case 675: ID JQV-24773-22210

Tenderness to the injection sight mild

sight : Case 676: ID ZSY-14261-43662

Within 36 hours of receiving the second dose I noticed a boil on my skin grew 3x and pus filled, almost like an immunity reaction. It had been a small whitehead on my back for a while and suddenly, overnight it grew into a painful tender boil. However 36 hours after the side effects passed, so did the boil- the pus drained easily. Im almost certain it was a reaction to the second dose. In hindsight I realize even with the first dose I developed a lower lip mouth ulcer/canker sore, which disappeared within 36 hours of the first jab.

No significant changes. Sleeping more hours overnight; wake up feeling rested and well; afternoon and evening fatigue, apparent during, mostly after normal exertion, example today of 45-minutes walking. Note: my oversight, prior few days there was some muscle and joint achiness. Although quite minimal, I should have reported it. I am not experiencing that today. I will rate my symptoms today as mild, but again, if I had any scheduled obligations, I would likely be too tired to fulfill them.

I am having major issues with my eyes. Over past 26 years have had 3 cornea transplants (left 2x). Shortly after leaving injection site, right eye wasnt seeing well (I wear specialty hard contacts). Worsened as afternoon progressed. By 7:30 that evening left eye very swollen and minimal vision. By 20, had very little sight in both eyes which were swollen and pink/red. Used my eye drops with no relief. Did not put contacts in today. Right eye not seeing anything clearly. Left eye has some sight. Ill be calling my surgeon tomorrow but am wondering if vaccine has initiated something in my eyes.

The vaccination sight was not following social distancing protocols. There was no protocol for screening for appropriate appointment times. It was first come first serve all day I arrived at 9:40 for my 9:50 am appointment only to find that hundreds of people were in line. I was released from observation at 12:17 pm. The hospital did not have the space for all of those who were present. Someone should have been screening for appointment times to keep people safely distanced.

In the beginning the injection sight had a small lump and redness. Then there seemed to be a slight rash. Then for a few more days the redness stayed and seemed hot. I had a few lymph nodes removed under my left arm twenty years ago when I had breast cancer. I had more removed under right arm so that is why I get injections on left arm. I don't know if this is why I had reaction. The redness seems to be less now and the lump is gone

sight : Case 1391: ID LZW-31483-48496

Sure at sight of injection mild

sight : Case 1392: ID G33-26221-48000

The fatigue was not today; the day after my vaccine, I was incredibly fatigued and thought it was due to something else (bad sleep, menstrual cramps) so I didn't report it. But in hindsight it was very pronounced fatigue and may have been vaccine related. The next day I felt much better.

1st shot was from Pfizer. I was mistaken when I stated Moderna was the first vaccine I received. Symptoms were much worse from the first vaccine. Severe arm pain (injection sight), swelling, redness, tenderness and soreness. I felt fatigue and out of sorts. Mostly just felt like curling up in a blanket and doing nothing for a couple of days. Soreness & arm pain lasted for about a week. Then the soreness began to get better.

sight : Case 1861: ID WEK-19245-19094

Pain in shoulder has gone way down. It disappears and has come back too. I dont feel any pain today. Noted. Ive had other pains in my right shoulder. Over the past year since august 22 (b)(6) when I torn C7 nerve from (b)(6) Doctor said it was hanging on by a thread but it wasnt completely torn. With time and vitamin B6 and 12 it should heal. It did but Ive always had intermittent pain. Though skiing at a high level it never really bothered me. Most of this current pain I believe is a result of just muscle pain. Ive had flu pneumonia shingle vaccinations and have experienced same pain. So I dont think this is a big deal and it appears that pain might finally be totally gone. I know the story is boring but I hope it gives the insight to the situation. I havent noticed since the shot of anything different following other vaccinations

It took about 12hrs before there was any discomfort at injection sight. It is very mild and did not interfere with my daily routine. It was mostly sore if you bumped or touch it. Other than that Im good and hope after I get my second shot in March it goes as well as this one. I more then anything want to say THANK YOU. I tried for weeks to get an appointment to no avail. A friend told me about the GET IN LINE APP is the best. It only took 5 days before someone called to make an appointment. I gave the app to numerous older folks as myself and they couldnt believe how in short time they too were called and got an appointment. Thanks again.
