

## V-SAFE Reports with Symptom Keyword = SORES

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN ( <https://icandecide.org/v-safe-data/> ) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

### Data

Data Source : V-SAFE (CDC) : download (June 2024) @ <https://icandecide.org/v-safe-data/>

Total number of V-Safe reports with symptom keyword SORES = 3412

Percentage of V-Safe reports with symptom keyword SORES = 0.18747 %

(V-Safe) Total number of Covid <<vaccine>> recipients with this symptom = 2482

(V-Safe) Percentage of Covid <<vaccine>> recipients with this symptom = 0.22714 %

### Limitations

This report shows the incidence of a symptom amongst a <<vaccinated>> population of 1092715 in the V-SAFE database. The onset of a high incidence after <<vaccination>> suggests possible cause - requiring further investigation of - 1) Other databases, such as VAERS and EUDRA, 2) Clinical literature and scientific papers.

sores : Case 538: ID YSH-27674-25588

I caught a nasty virus in the beginning of July last year from work. I had lingering symptoms and 3 months after being acutely sick an ENT dr. said he felt I had caught covid because the long term fatigue, fogginess in thinking is showing up in people who had covid. I developed sores in my mouth about 2 weeks after I was initially sick in July, again in the end of October, then again a couple days ago. The ENT dr. Told me he feels I have had shingles outbreaks along branches of my trigeminal nerves due to immunoneuro fatigue. I don't no if this lastest episode is related to getting my 2nd covid vaccine dose on Jan 5 or not.

Last nite after my check inI ate nuts that I had to crackwalnut & almonds & my tongue got very red & inflamed with canker sores on the sides. I do not have any allergies & NEVER reacted to eating nuts. I have been eating theses since Christmas. Not sure this was a reach to the vaccine but thought I should mention it. I gargled with warm salt water & that helped. Eventually my tongue return to normal.

Swollen scalloped tongue. Of note, Ive had some likely linked symptoms (my mouth has been dry, Ive had a few canker sores under my tongue, Ive had the taste sensation of having

a burned tongue while eating, and Ive had a white coat on top of the tongue that couldnt be scraped off) since before I received my second dose of the vaccine, starting the night of December 25th (2 days after my first dose of the covid vaccine). However I first noticed the scalloping on the sides of the tongue from pushing against my teeth starting January 14th (the day I got my second vaccine dose) and the scalloping has since gotten more defined and recognizable, prompting me to google it and realize it was linked with tongue swelling. The swelling seems localized to mouth, more horizontal than vertical. Does not impact or interfere with my ability to swallow, close mouth, or breath in any way.

Started developing cold sores in the corners of my mouth. I have been feeling increasingly achy and fatigued over the past week. I only get cold sores when my immune system is fighting other things. Since starting to wear a mask back in March, I haven't gotten sick, so I feel like the cold sores are an immune response to the covid-19 vaccination.

Acid stomach. with the draining of my sinuses? The lungs are clearer than they have been for months and months. sinus still draining, but less and the unpleasant smell and taste of it is also clearing. I've had loose stool also for months, not uncomfortable but loose, that's also changing, firming up. With all of this changing and only since the vaccination I wonder if I was exposed last summer and didn't know it, but COVID was working its effects regardless. My mouth is regaining its slippery feel. The cracks and coldsores are resolving and not recurring, which they were. Small but either one coming or going. I couldn't match and significant change in the reduction diet over a 2 month period, then vaccine and it resolves. Huh..

I have problems to sleep so last night I took a pill of GNC Melatonin 1mg Never Had Melatonin before and I had an allergic reaction!!!I had some rash specially on my head and on one of my wrists. I checked the internet if I could take Benadryl but I understood it is no good if one took a pill to sleep So I just took a glass of milk (that has helped me) and it worked. Later I read that I had to put this pill under my tongue, which I didnt, I took it with a glass of water And that was good because yesterday I had 2 canker sores (or gumboil?) in my mouth that appeared just like that. So I could not sleep any way and felt tired because of the lack of sleep I guess, and mild head ache

My tongue is slightly swollen, sore, and there are very small canker sores around the edges. It has since a few hours after I got the shot but I didnt think to report it before. The first day it made it easier for me to bite my tongue and I thought thats why it was feeling so sore. But by last night I could tell that it was just sore and when I looked at it I could see more than just where I bit my tongue was affected. And the ridge in the middle looks deeper than usual. I seem to feel a little bit more in the late afternoon and evenings.

I have herpes II and occasionally have cold sores. I thing for the first 48 hours but last night around midnight my neck and face have broken out (swelling, redness, dry skin, some weeping from the sores. Always in the past it has been just one localized area, perhaps 1-2 times per year, with stress as a trigger. But this is in several spots, my ears, and under my jawline, and a fairly strong reaction. No fever, no pain other than the itchiness. I dont know that this is related to the vaccine, it I wanted to mention it because of the timing.

1.5 to 2 days after the injection I started getting a rash on my left knee and sores on my tongue and gums. Both have increased in severity since then and my knee now has several marks that look like chickenpox. My mouth and tongue are very painful and extends to throat. May be unrelated but I have never experienced this before.
