

V-SAFE Reports with Symptom Keyword = TASTE

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

Data

Data Source : V-SAFE (CDC) : download (June 2024) @ <https://icandecide.org/v-safe-data/>

Total number of V-Safe reports with symptom keyword TASTE = 20524

Percentage of V-Safe reports with symptom keyword TASTE = 1.12769 %

(V-Safe) Total number of Covid <<vaccine>> recipients with this symptom = 16044

(V-Safe) Percentage of Covid <<vaccine>> recipients with this symptom = 1.46827 %

Limitations

This report shows the incidence of a symptom amongst a <<vaccinated>> population of 1092715 in the V-SAFE database. The onset of a high incidence after <<vaccination>> suggests possible cause - requiring further investigation of - 1) Other databases, such as VAERS and EUDRA, 2) Clinical literature and scientific papers.

I'm not sure I reported elevated heart rate of 116 BPM which happened on 12/19/20. At approximately 1700 hours yesterday, I noticed that I could not smell or taste the sweetness of a banana but those senses returned back to almost normal this morning. On 12/19/20, I noticed mildly dulled sensation around the tip of my tongue which wasn't bothersome, not sure if it's related to the brief loss of my ability to smell or taste banana yesterday.

taste : Case 1312: ID FQR-14728-51893

I didn't get signed up for visage on Tuesday when I had my vaccine but I did want to report to you that I had a reaction within 5 minutes. This includes a stinging on the tongue followed by a metallic taste followed by mild but noticeable shortness of breath with flushing and warmth of the head, neck and hands followed by burning on the bottom of my feet and then swelling of my lips. The symptoms started to resolve within 10-15 minutes. I was treated with PO Benadryl and Pepcid. Within 20-30 minutes the symptoms were gone. I experienced a headache on and off that evening and then no further symptoms.

I don't think I checked in yesterday- I got really nauseated at work from smelling seafood. It was prolonged and zofran did not work. Lasted almost 2 hours gradually getting less. I am still able to eat just select foods - hardly ate yesterday- today was better and I ate small amounts but more then I've been- I was off work. Both the tongue numbness and sometime mucous membranes part of my lips are numb. I continue to have increased surges of saliva secretions, altered taste and aversions to a lot of foods/I took several Doses of miralax last night and this morning and finally had the first bowel movement in a week. I'm still bloated, get full fast, and have frequent heartburn.
