

V-SAFE Reports with Symptom Keyword = TOES

compiled by Craig Paardekooper

V-Safe is the largest collection of vaccine testimonies on the planet.

One of the reasons why the CDC was so reluctant to release the free-text entries of the V-Safe reports is because these entries are the personal testimonies of vaccine effects – numbering 390,000 per release, and numbering millions in total.

Having censored and erased hundreds of thousands of testimonies of vaccine injury from Facebook, the government was equally reluctant to be the provider of what is the largest collection of vaccine testimonies on the planet – collected by the CDC themselves !

Perhaps this is <<the longest story ever told>>, the testimony of 1 million people.

Many thanks to ICAN (<https://icandecide.org/v-safe-data/>) who pursued the CDC through the courts until they finally conceded and began to release this data on January 15th 2024.

Data is from all 4 releases, up until June 15th 2024, reported by 1,092,715 Covid <<vaccine>> recipients. The next release is on July 15th, 2024.

Data

Data Source : V-SAFE (CDC) : download (June 2024) @ <https://icandecide.org/v-safe-data/>

Total number of V-Safe reports with symptom keyword TOES = 1484

Percentage of V-Safe reports with symptom keyword TOES = 0.08154 %

(V-Safe) Total number of Covid <<vaccine>> recipients with this symptom = 1218

(V-Safe) Percentage of Covid <<vaccine>> recipients with this symptom = 0.11147 %

Limitations

This report shows the incidence of a symptom amongst a <<vaccinated>> population of 1092715 in the V-SAFE database. The onset of a high incidence after <<vaccination>> suggests possible cause - requiring further investigation of - 1) Other databases, such as VAERS and EUDRA, 2) Clinical literature and scientific papers.

I am a RN and I'm trying to reach the referral line to be seen virtual but I need to know if I need to be seen my emergency instead? Please provide advice ASAP

My vaccine was given on the right arm and I'm concerned with the following: I woke up with a pounding headache severe enough to awake me and it seems to be mostly on the right side of my head. Then it progressed to severe nausea, I am unable to eat anything just liquids. Bland food. I am also concerned about my right armpit and right breast which are inflamed and severely sore with some lumps felt. Never before have I had issues. Also I am very concerned that my right leg is feeling heavy and numb at times. Toes on the right foot also feel intermittent numbness. This morning I also noticed my face on the right side feels tight. No the same feeling to the left meaning the for example if I smile I do not have symmetrical sensation. I have diminished sensation on the right side of my face. Please help me! Call my cell phone(b)(6)

toes : Case 499: ID SM4-99804-59643

On day 8 (Jan 22) I experienced the peak of swelling, redness, heat, itch at the injection site. Swelling was like a lump that was 3 inches by 2 inches. That night, at roughly midnight I started to experience extreme burning in all of my toes. This was very painful and something that I have never experienced before. Maybe this is what extreme arthritis feels like? I don't know. After a couple hours I proceeded to treat the pain with Tylenol. I was then able to sleep the next morning the pain was gone. However, I have pronounced numbness in my feet. This is very unusual. All my toes and the area surrounding them is quite numb. This is now day 11 and the situation with the feet is still the same. It feel like I am walking with cotton surrounding my toes. I don't fully feel my socks, shoes, floor, sheets, etc. The redness, swelling, burning and itching in my arm is now almost entirely gone. I am wondering if the situation in my feet will improve. And I am wondering if I should proceed with the second injection.

I received the Pfizer COVID vaccine on Wednesday, January 20th at 1:15 PM. After I got the vaccine, I went in to the observation tent for observation. I sat down and immediately felt a tingle sensation in my fingers on my left hand and my arm hurt at the injection site on my left arm. After I left the observation and returned home, the rest of the day/night, my left arm hurt where I received the shot, I had a headache, my neck hurt, and I felt a little nauseous. The next day, January 21st, I felt a slight tingle sensation in both my hands and feet on my left and right side. January 22nd, the slight tingle sensation in both hands and feet on my left and right side continued, and I had a very bad headache. The slight tingle sensation has continued to present day along with some muscle soreness in my arms and legs. The tingle sensation is intermittent throughout the day in my fingers and toes. I have no numbness and it is not painful. It is just a slight minor tingle sensation. I messaged my doctor on January 25th and was advised to monitor it and contact her back if it doesn't go away. Present day is January 27th, 1 week since receiving the vaccine, I still have slight tingling sensation in my fingers and toes on my left and right side.

I initially didn't think there was a correlation, but following me follow-up doctor's appointment he couldn't conclude whether or not there was or wasn't. I had your nail surgery on both of my big toes on Tue 19-Jan-2021. I then received my Covid-19 Vaccination on Sat 23-Jan-2021. The initial pain from both big toe surgeries was mild to moderate, but following my receipt of the Covid-19 Vaccination the pain in both big toes shot up tremendously. The pain still persists.

Within minutes of initial injection i tasted metal in my mouth. The sensation in my mouth also felt cool like. This feeling in my mouth happened so quickly & so strong that i mentioned it to my coworker while waiting the 15min before we could leave. By 5PM today the metal/cool like sensation in my mouth moved throughout my whole body. Right now it feels as of the cool sensation is bouncing around my whole body between my head, face, each hand, my feet, fingers & toes. Approximately 4 hours after injection i began to feel spacey & very weird, almost drunk like. The spacey/drunken feeling lasted 2hours before subsiding. Now i just feel the cool sensation bouncing around my body.

Within hours after getting my first dose, I had intermittent tingling, itching and sensitivity in my toes, side of foot, thighs, hands. Gone in 1 week. I had stopped gluten a week prior to the first vaccine due to presumed celiac disease with predominantly neuromuscular symptoms. Chalked up these symptoms to nerve function return. Also had a small itchy rash on my left hand similar to celiac rash within 1 he of first vaccine which got better after 3-4 weeks.. However, after my second shot, I noticed intermittent burning in the soles of my feet, again gone after a week. Could this be local immunity memory??? Of note, comprehensive neuro exam and emg 16 days after first shot normal. I'm a Pediatrician. These thoughts occurred to me after reading a Dr. Chat thread describing how some are noticing pain in the opposite arm that was vaccinated. Pertinent discussion for those with tcell disease. I also have a history of thyroid cancer and PLEVA.

toes : Case 696: ID QH7-32490-43068

Same shaking episode reported previously occurred exactly at 11:00 PM again lasting for intervals of 10 minutes until 11:30 PM. Also had very dry mouth and legs were red from top of knees to toes. Did not sleep well afterwards. Felt nervous feeling at 5:00 AM and got up with very dry mouth. Coffee did not taste good. I love my morning coffee. Tried to eat cheese toast at 6:00 AM. but no appetite. Have been resting all day. Had a little appetite at lunch. Really think this severe shaking is a side effect and strange occurring every 36 hours.

I suspect I had mild COVID in early August. At that time 101.3 fever went away a few hours after Tylenol. Had red skin on ankles and darker red on two toes and top of left forefoot. Then later white scale bottom right foot. Each symptom seemed isolated appearing over several days. Thought fungal infection. Treated with twice epsom salt soaks and peroxide for about 8 days. Then started with soles of feet sweating profusely, using 2 or 3 pair of socks per day. Didn't put it all together till recently. Maybe nothing. Now easily fatigued more than usual.

Immediately after receiving the shot, as with the first shot, I had a metallic taste in my mouth for a few minutes. With the second shot it also came back about a little stronger 20 mins after I first experienced it. Arm got pretty sore last night and then throughout the night I experienced a lot of aching in my joints and muscles, even one of my middle toes throbbed for a few minutes. It was like I hurt in different places at different times. Lower abdomen hurt once. Had a feeling of nausea once today, but otherwise have been feeling pretty good since about 11:00 a.m.

This was an all night/into the morning episode of a fever. My condition progressed throughout yesterday until last night/this morning I had the chills, headache, sinus pressure, lymph node pain & swelling, notably under my left arm where I had my shot & around my throat, every joint hurt- from my fingers to my toes, especially my knees, hips & around my ribs, my breathing was shallow & my lungs ached. I couldnt sleep through the night. I kept waking up, completely parched and drank around 64 oz of water after bed until I finally got out of bed for good. It was like a flu fever I had during childhood. With my first shot I only had a migraine. Comparatively this was much worse last night. During the day today my left armpit lymph node still is sore, I feel exhausted, and unable to focus, but it is definitely better than last night/morning. I am relieved. I could use another day to fully recover. But I have to work tomorrow.
