

```
// MatDeck program to create mysql database

// If database parameter in db_connect() function is left as an empty
string
// you will establish a connection to server instance

// Connecting to MySQL server instance
conn := db_connect("mysql", "Name", "localhost", 3306, "test_user",
"Test123", "")

// We will use db_query() function to create new database
db_query(conn, "CREATE DATABASE matdeck")

// List all Databases
res := db_query(conn, "SHOW DATABASES")
print(res)

// Disconnecting from the server
db_close(conn)
```
