

```
// This MatDeck program creates a table in sqlite databases

//Defining the function NewTable
//When call the function NewTable() it will create a new table called
"Software"

NewTable()
{
    // Connecting to SQLite server instance
    conn := db_connect("sqlite", "Name", "", 0, "", "", "matdeck")

    // We will use the db_query() function to create a new table
"Software"
    // which contains two columns : Name and the Number of data
types varchar
    // for string storing and Number of integer data types
    db_query(conn, "CREATE TABLE Software (Name TEXT, Number
INTEGER);")
    print("Software Table is Created")
}

// Calling the NewTable() function
NewTable()
```
