

```
// This MatDeck program shows how to delete data from tables in
SQLite databases

// Connecting to the server
conn := db_connect("sqlite", "Name", "", 0, "", "",
"sqlite_database.db")

// Selecting the query and displaying the Name column data
db_query(conn, "DELETE FROM Software WHERE Number = 24")
print(db_query(conn, "SELECT * FROM Software"))

// Disconnecting from the server
db_close(conn)
```
