

1. Why is liver health important?

The liver is a genius at synchronization, skillfully coordinating multiple essential functions for the body. In fact, the liver performs 500 vital functions in the body! Like a biological 'mastermind', it controls the filtering and purifying the blood flowing through it, producing hormones, and simultaneously storing extra nutrients like fat-soluble vitamins and removing excess proteins, damaged red blood cells and toxins.

2. Is the liver necessary for digestion?

Yes. The liver creates bile which is important for digestion, specifically for breaking down fats. Bile also helps to metabolize proteins.

3. How does the liver support immunity?

The liver contains the largest collection of phagocytic cells in the body. Phagocytic cells protect the body from foreign particles, bacteria, and dead cells. Because the liver filters what passes through the gut, it is an important barrier between us and the outside world in terms of immune defense.

4. What makes Mannatech's Liver Support different from other liver supplements on the market?

Mannatech's Liver Support includes a synergistic blend of science-backed ingredients such as Milk Thistle, NAC, and Turmeric. Our formula also includes a meaningful amount of NAC—a key precursor to glutathione—and is backed by our commitment to clean-label, vegan-friendly standards.

5. What are the key benefits of taking Liver Support?

Mannatech Essentials Liver Support is formulated to detoxify, protect, and support healthy liver function and digestive health.* Through a proprietary blend of herbs and nutrients, it promotes healthy, daily functions including breaking down red blood cells, the production of hormones, secretion of bile, processing many vitamins and nutrients that can be used by the body, and detoxifying various substances.*
