

# MarFlex Super Stripping Pump (MSSP)

# MarFlex Super Stripping Pump (MSSP)

The MarFlex Super Stripping Pump creates a partial vacuum within the super stripping line of this Deepwell Pump. The vacuum causes a difference of pressure with the cargo, so it is siphoned up through the stripping line, present at the bottom of the well.

The Super Stripping Pump, typically located on the deck connected to cargo decks, can pump either to another tank or a manifold and can be used up to 26 meters.

The MSSP is able to pump cargoes that range in temperatures from 4.4°C – 100 °C.

## Types of Cargo

The Marflex deepwell cargo pump can handle different types of cargo, e.g., oil products (produce oils and industrial oils) and different kinds of chemicals.

## Materials used

All our cargo pumps are standard-made in stainless steel A316L. However, due to the different kinds of cargoes that our pumps can handle, we can also supply other materials such as Duplex steel and Super Duplex steel. The MSSP can come equipped with a mechanical seal, which is able to withstand more pressure. The seal is easily replaced meaning that maintenance is simply achieved.

## Benefits of the Super Stripping Pump:

- Can pump and be used with only 2 liters of cargo left in the well
- Cost-efficient so more affordable
- Easy to operate
