RMail™ By RPOST

Why We Are Unique

Our features provide the best user experience. Our prices make us the most affordable. And our services connect elegantly inside your existing email programs and business systems.

Email Privacy & Compliance

SMARTR Email Encryption
Dynamically adapting encrypted email ensures elegantly easy; simple for recipient means happy sender. Far beyond opportunistic TLS, RMail encrypted email service smartly adapts to provide peace-of-mind with end-to-end encryption, secure file sharing, auditable proof of fact of GDPR and HIPAA privacy compliance, email thread security monitoring, and more.

Human Error Prevention & DLP

Mutating the DNA of Data Leaks
Automatically sensitize users of their need to treat certain messages differently, seamlessly and in the flow of email and work, with in-the-moment-of-sending, bite sized insights and alerts. Empower your people and prevent data loss with AI-Infused and automated rules-based email compliance and security recommendations.

Targeted Attack Pre-emption

Intercepting the Human Instinct to Please
Nip cybercriminal-induced mis-wires (a/k/a wire fraud) with real-time alerts that expose whose email account is being eavesdropped on, which email addresses have tricky lookalike domains, and when a reply is about to be hijacked--must-have additional layers for your Business Email Compromise defense. Outbound Pre-Crime™ email security at its finest!

Certified Proof of Content Delivered

Proof of Who Said What When, by Email
Gain insights of the overall journey of your email, how popular who read what when, and receive forensic certified proof.

Outbound AI Security Stack

Perfect Harmony, Enhance the Outbound
Keep your existing inbound email security — and even your outbound DLP if you so choose. Add RMail outbound security gateway, in-the-inbox integrated cloud email security, and in-the-ether e-security content controls: all, some or one. RMail harmoniously extends your existing email security systems, adding elegantly-easy encryption user experiences, unique BEC targeted attack detection, and more, with AI DLP automation.

Breadth of Services

RMail empowers you; all of the functionality you need, all in one installation onto the platforms you're already using -- email encryption, certified proof, AI-infused human e-security error prevention, in-the-moment personalized e-security training, and much more.

Simplicity

We understand that the power of e-security technology resides in user adoption. That is why RMail is built with AI that automatically sensitizes users to today's e-security and e-compliance needs, subtly nudging them to make the right email-related e-security decisions. Securing your business has never been easier.

Legal Proof®

Each message comes with a Registered Receipt™ email record; the global standard for court-accepted, timestamped proof of secure delivery of emails — and its attachments. This record is durable (it may be forwarded, retaining its self-authenticating integrity), and is self-contained (it does not require any other record to be stored anywhere).

Friendlier Service

Excellent technology is key, outstanding service is gold. Getting both in a single package is pure bliss. Our teams are more knowledgeable and friendlier to work with. That is why our customers rate us with 99% satisfaction scores and 5-star accolades.

RSign By RPOST

Why We Are Unique

RSign is the only global eSign platform designed with a (more) affordable, flexible pricing model that adapts to businesses from all industries, sizes and regions, and at the same time is feature-rich, easy to use and friendlier to work with. Built on 20 years of leadership in e-security and e-compliance.

Guided eSign Experience

Blissfully Elegant, Easy and Intuitive
Easy for signers means happy senders. RSign transforms documents and forms into guided, gracefully stylish e-signing experiences. And our expert staff will even transform your signed documents into eSign templates for you — easy onboarding, fast migration from another system.

eSign Templates Automate Faster

Drag-and-Drop to Create Template Library
Instantly transform a commonly used form or document into an RSign template. Set up once, re-use it forever. Create logic, build rules, or imagine any other eSign document control and it'll be there, in RSign. Close deals fifty times faster and say goodbye to paper.

Digital Forms & Bulk eSign

Power, Efficiency and Agility Combined
Digitize any form with a click and a swipe. Modernize your business process mentality. Paper forms are passé. Web forms need a webmaster. PDF forms are cumbersome to share. Doc forms need field alignment wrestling. With RSign, form fill, sign, and data extract struggles are no more.

Privacy, Compliance & Legalities

eSign is Great. Legal eSign Rules
Security, privacy and compliance are in our DNA. RSign lets you meet the strictest eSign laws and privacy regulations wherever you may be, whether GDPR, HIPAA, E-IDAS, UETA, ESIGN or whatever you need, we're here for you with the peace of mind that our robust legal eSign audit trail and transaction forensics deliver.

Dynamic API, Integrations & Automation

Embed RSign Into Your World
We've built RSign into the most popular apps, messaging programs, document management systems, CRMs, ERPs — any application that lets you print. And we've got a range of APIs that are configurable to address your every imaginable automation need with local experts to work with your teams from design to deployment, every step of the way.

Breadth of Services

At RSign we're all about innovation. We have grown our platform over two decades alongside our customers' and partners' evolving needs to meet all their requirements and scenarios. Features, rules, API, turnkey and custom integrations; whatever you need, you can count on us.

Simplicity

We believe technology is not just about what it can do, but how it feels. That is why we have designed and built RSign to be robust, yet simple and intuitive for all users, whether senders, signers, process managers or API owners. RSign is blissfully elegant.

Legal Proof®

Compliance and security are in our DNA. Each eSign transaction returns a legally-binding, court-admissible, cryptographically sealed signing certificate that is locked to the content and audit trail. RSign means Legal Proof® eSign evidence.

Identity, Authentication

RSign is built to meet the highest security standards worldwide, providing end-to-end and in-transit encryption, multi-factor authentication and more. All aspects of the RSign eSignature record can be later authenticated: who signed what, with whom and when.

Why We Are Unique

Finally, DRM that is easy enough for real people to actually use; we're never going to require readers to download, login, or have any special software. Elegantly easy.

Control Document Access

Track or Restrict Access
RDocs™ converts any presentation or document into a **R**ights **P**rotected **D**ocument file – an **R**PD™ file – which empowers the sender to track reader activity or restrict access to certain viewers – *all with no companion software download or logins for readers*.

Manage Content Sharing

Control Who Views What When
Instantly transform any document into an RPD™ file, save or send. With a click or a flick, you can make a document self-destruct on a timer, after a number of views, or restrict sharing via print, copy, forward or photo.

Restrict Views by Location

The Power of Where
Location, Location, Location. Modernize the way you think about reader location. You can send an RPD™ attachment, restrict the geography where it can be viewed, or define the internet locations where it can be accessed – by reader domain, IP range, or geographic region.

Control or Kill Content After the Send

Perfect Send for the Fickle or Accident Prone
Whether you later decide that sensitive document probably should not live a full life out-in-the-ether or in your colleague's inbox; or you realize you accidentally sent sensitive content to the wrong recipient, if it was sent as an RPD™ file attachment, rest assured, you have total control of your document even while it is at the recipient. You can kill the document – make it self-destruct without trace – or temporarily disable viewing, and more; all after the send.

Interact In-the-Document

Think Social Documents, Collaboration Re-Invented
The coolness of social media now meets electronic documents. We've built the power of social interaction into documents. Now you can track not only who views what, when and where, and for how long, but you can also append notes into the document and tally viewers votes, likes, and feedback --- in real time. As they read, you see their feedback. As they "like", you tally their reactions.

Full Rights Controls
We're all about innovation. We have rethought document rights management with our homegrown patent-pending technology which means we don't make anyone install special software to send or view. Yet, we're all about providing all the rights you can imagine – control viewing access, duration, sharing, tracking, and more, for any document sent to anyone, even after sent.
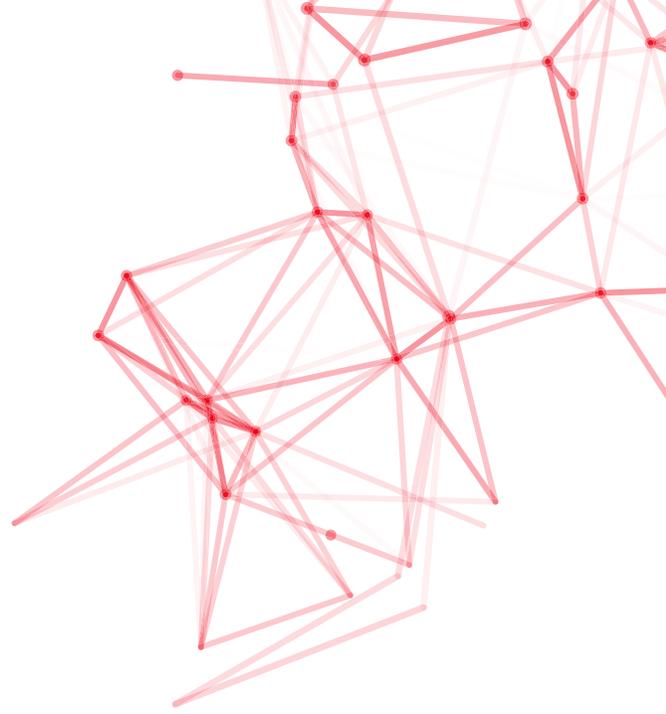

Preserve Power of Email
We believe you should be able to apply controls to any document in the normal flow of your email collaboration. We've designed RDocs to preserve the power of email – no storage in the middle, no companion downloads for readers – pure attach-and-send normalcy; with pure access and content control bliss.

In-Document Interactivity
Innovation is in our DNA. We're not only re-inventing document rights management, but we're also re-inventing the category. For those without access, deny them viewing. For those with access, let them flourish by empowering them to provide in-the-moment-of-reading real-time feedback to you, the originator. And we make it easy for you to tally likes, dislikes, votes, on any document, and in real-time.

Leakers Folly
RDocs™ uniquely solves the challenge of identifying who leaked what content when. The RDocs™ steganography option adds authorized reader visual identity tags that traverse each viewed page. Readers visually see that if they were to share a snapshot of any one page or part of a page, they would be at risk of the leak being easily traced back to them.

Thank you, to the more than **25 million people** the world over, who have put their trust in our team and technology, **since 2000**.
