## EXECUTIVE SUMMARY

### INTRODUCTION

The S3 Portal is a web-based customer portal which allows our customers to view trade data. For more information on S3's Reporting Suite, please visit <http://s3.com/>.

### PURPOSE

The purpose of this document is to provide you with a guide to use the S3 Customer Portal.

## ACCESSING THE PORTAL

Visit our customer portal homepage at: <https://s3.s3.com>. For login assistance please contact [help@s3.com](mailto:help@s3.com).

### LOGIN

Your login is typically your email address.

### PASSWORD

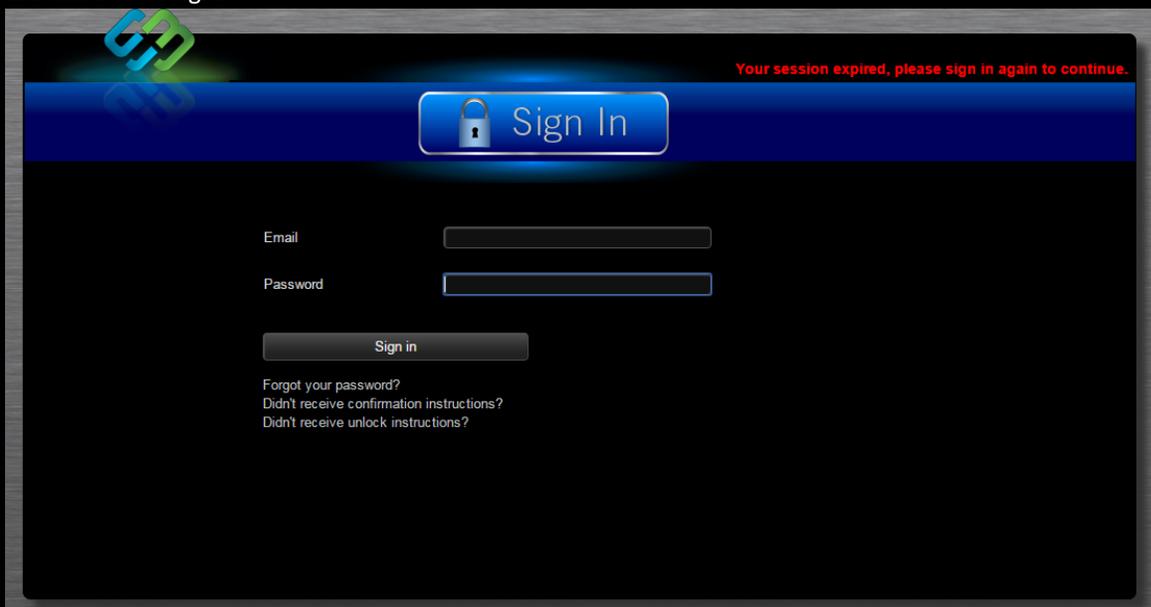

Initially you will receive a temporary password. The first time you log in, you will be asked to change your password. Passwords will expire after 90 days at which point you will have to change your password.

You can also change your password at any time by clicking the 'Change Password' link in the upper right hand corner of the portal.

### TIMEOUT

Unless configured otherwise, the portal will automatically timeout after 30 minutes of inactivity. At this point you will need to re-login.

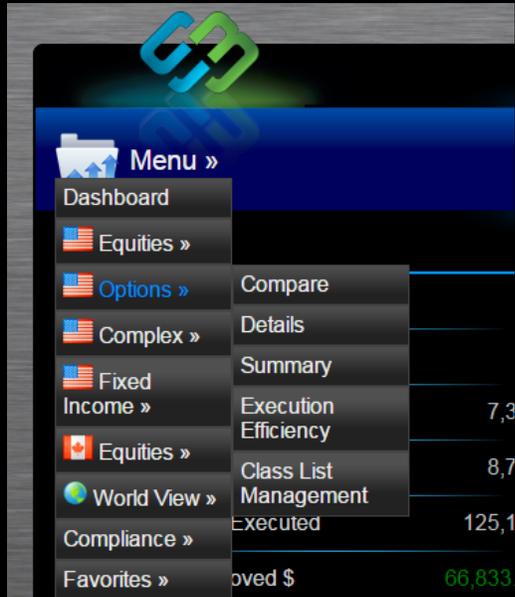

## NAVIGATING THE PORTAL

### MENU

Once you log in, navigate the portal using the menu located on the left side of the portal page.

### REPORTS AND FEATURES

The S3 Portal is primarily used for reporting. You can navigate to these reports using the menu or drilling into details from the dashboard. Your list of reports might include [Equities](#), [Options](#), [Complex Options](#), [World View](#), [Compliance](#), and other custom reports. In general, reports will have these types of features:

#### TITLE

At the top of each report should be a title to let you know which report you are currently viewing.

Complex Order ID	Status	Entry	Route	Order Time	Underlying	Type
896249202269	Open	ACME	NITE	11/30/15 16:14:24.813	SPX	LMT
245649202269	Filled	ACME	AUTO	11/30/15 16:05:46.697	RUT	LMT
517449202269	Open	ACME	MSCO	11/30/15 16:04:04.549	SPY	LMT
697349202269	Canceled	ACME	CDRG	11/30/15 16:02:33.558	SPX	LMT
149649202269	Filled	ACME	AUTO	11/30/15 16:01:15.369	SPX	LMT
733349202269	Canceled	ACME	CITI	11/30/15 16:00:59.398	SPX	LMT

## FILTERS

On the left side of each report will be a list of filters. Click on a filter to expand the filter options. A checkmark next to a filter indicates that filter is currently in use. After selecting your filters, you must click the 'Refresh' button to apply. While many filters may be found on multiple reports, each report in the portal has a unique list of filters. For a full list of report filters and definitions, see the [appendix](#).

*Tip: Use an asterisk "\*" in the text box  to select all from the multi-select pop-up windows. Then click the selection icon to edit your selections.*

CLASS LIST MANAGEMENT (SYMBOL LISTS) Option and Equity Reports can be filtered by custom symbol lists, which you can create using the Class List Management tool. Once you have created and named your custom list, you will find that list name in the filter dropdown. You can focus in even further by combining multiple filters in one search. A nice feature of these defined lists is that the list will change as you change your dates based what the symbol list was as of that particular date or date range.

## GROUP BY

At the summary level of the Equites and Options reports, you have the ability to group the data by month, day, entry firm, route firm, symbol, order type, and order size.

The screenshot shows the 'Summary' report interface. The 'Equity Child Summary' tab is active. The date filter is set to '12/1/15 - 12/31/15'. The 'Group By' dropdown menu is open, and 'Group by Route Firm' is highlighted with a red box. The main table displays columns: Date, Entry, Route, Symbol, Type, Order Size, Orders Placed, Orders Filled, and Shares Placed. The 'Route' column contains values like AUTO, CDEL, CDRG, CITI, ETMM2, LAVA2, MSCO, NIT1, NITE, and NSDQ\_NM.

## SYMBOL LIST GROUPS

For the Equities Summary Report, you can choose to group by one or more symbol lists and compare to your overall summary data. Click on 'Symbol List Groups,' then click the 'Add' link. You can give your group a label, select a group from the dropdown, and optionally join with another group list. Click the 'Remove' link to remove your group or click the 'Add' link to add and view additional groups at the same time. Custom symbol lists can be created using the '[Class List Management](#)' feature.

The screenshot shows the 'Summary' report interface with the date filter set to '04/11/16'. The 'Symbol List Groups' panel is open at the bottom, showing two groups: 'All NYSE' and 'All NASDAQ'. A red arrow points to the 'Symbol' column header in the table, with the text 'List names or labels appear here.' below it. Another red arrow points to the 'Add' button at the bottom of the 'Symbol List Groups' panel.

## PUBLIC DATA (605)

For the Equities Summary Report, you can choose to include the public 605 data. Select the date range for months you want to see the public data. Click the 'Firms' icon to choose which public data firms you want to view. Select 'Show' and click the report 'Refresh' button. The public data will be highlighted in blue on the screen giving you the ability to quickly compare your data to the public data.

## REPORT FUNCTIONS

Most reports come with a default set of functions.

The screenshot shows the 'Complex' report interface. At the top, there is a 'Menu' button and a 'Complex' label. Below this, there are tabs for 'Complex Orders', 'Complex Legs', and 'Complex Trades'. A toolbar contains several buttons: 'Refresh', 'Change columns', 'Export', 'Save Favorite', 'Scheduled Report', and 'Mass Audit Status'. A red box highlights these buttons, and a red arrow points to them with the text 'Report Functions'. Below the toolbar, there are filters for 'Date' (12/20/16), 'From' (00:00), and 'to' (24:00). There are also buttons for 'Order Types' (None, MKT, LMT, MKL, STP, STL) and 'Order Status'. A table of report data is shown below, with columns for 'Complex Order ID', 'Status', 'Entry', 'Route', 'Order Time', 'Underlying', and 'Type'.

Complex Order ID	Status	Entry	Route	Order Time	Underlying	Type
973149212449	Filled	ACME	AUTO	12/20/16 16:14:31.383	SPY	MKL

768149212449	Filled	ACME	CITI	12/20/16 16:01:31.694	SPX	LMT
694149212449	Canceled	ACME	AUTO	12/20/16 16:00:51.786	SPX	LMT

- Refresh – Clicking refresh will update the report using the latest data available and filters selected. When changing filters, the refresh button will turn red as a reminder that you must click refresh to update the report.

*Note: You can Export or Save Favorite using the new filters selected without clicking refresh. This saves you the time of waiting for the data to refresh if you are sure of your filters.*

- Change columns – Use this function to hide and unhide columns. Note that many columns are hidden by default. Also, you cannot currently change the column order.
- Export – Clicking 'Export' will send you an email with a link so that you can download the current report in an Excel format.
- Save Favorite – Save Favorite allows you to save a report as a favorite so that you can save your filters and quickly access your standard reports anytime you are in the portal. Click [here](#) to see more information on how to access or edit favorites.

*Note: Once a favorite is created, you cannot edit filters or columns. You can only update the type, personal or company. You can however save over a previously saved favorite.*

The 'Save Favorite' dialog box has two tabs: 'Favorite' (selected) and 'Scheduled Report'. Under 'Visibility', there are radio buttons for 'Personal' (selected) and 'Company'. Under 'Date Range', there is a dropdown menu set to 'As Entered'. There is a 'Favorite Name' input field and a 'Current Favorites' dropdown menu showing '<create new favorite>'. There are 'Cancel' and 'Save' buttons. A red error message at the bottom says 'Favorite Name cannot be blank'.

- **Visibility** - When you create the favorite you have the option to save it as a personal favorite, or you can choose to allow everyone in your company to access this report.

- **Date Range** – Depending on the type of report, ‘Date Range’ gives you the flexibility of saving your report for a specific day, month, quarter, date range, or most recent day.
  - As Entered – Your report will use the current/same date filter each time the report is run. Unless that data changes, the report results for this saved report should not change.
  - Most Recent Day – Your report will use the most recent trading day’s data.
  - Month to Date – Your report will use the current month’s to-date trading data.
  - Previous Month – Your report will run against the previous month’s trading data.
- **Favorite Name** - You must supply a name for your report.
- **Current Favorites** – You can save as a “new favorite” or you can save over a previously saved favorite.

*Note: Favorites and Scheduled Reports are completely independent of one another. Saving or updating a scheduled report does NOT update a favorite and vice versa.*

- **Scheduled Report** – When saving a report as a favorite, you have the option to schedule the report. Scheduled reports will be emailed to you as an excel document based on the set frequency of the report. To read more about scheduled reports, click [here](#).

### Save Scheduled Report

Favorite
Scheduled Report

**File Name:**  
  
(include the string {DATE} to indicate a date location other than the end of the name)

**Frequency / Date Range:**

**Report Type:**

**Scheduled Report Name:**

**Current Scheduled Reports:**

This report will be emailed to [jvest@s3.com](mailto:jvest@s3.com).

- **File Name** – Since a scheduled report is a file that is either an email attachment or downloaded, you must supply a name for the file.
- **Frequency / Date Range** – Choose how often you wish to receive and the date range for the report. Scheduled Reports are generated after the end of day processing is complete for the previous day’s data.
- **Report Type** – Select the type of report you wish to receive, Details or Audit Trail.
  - Details Table – Exact Details of the report in an Excel File Format
  - Audit Trail (pdf) – Audit Details in pdf format. For more information on audit trails click [here](#).
- **Mass Audit Status** – If your report has audit features, clicking ‘Mass Audit Status’ allows you to enter an audit comment on all orders in your current report at one time. For more information

on audit trails click [here](#).

**Add New Comment**

**ALERT: Status will be applied to all 4162 Complex Parent Orders currently selected, regardless of current status**

### FAVORITES

Any report can be saved as a 'Favorite.' To access Favorite Reports, mouse over 'Favorites' listed menu items. When you mouse over 'Favorites you will have four sub-menu items: Personal, Company, Public, and Manage Favorites.

When you mouse over 'Personal,' 'Company,' or 'Public,' saved favorites of each type will be seen out to the right. When you click on a report name, the report will be executed immediately and you will be taken to that report.

To manage your favorites, click on 'Manage Favorites.' Once on the 'Favorites' screen, click any report name in the 'Current Favorites' box on the right. Once a report is selected, you can change the name, update the visibility type, or delete the report.

*Note: While all favorites you have access to will be listed, you can only edit your personal favorites.*

### SCHEDULED REPORTS

You can run, view, or manage your scheduled reports under Menu->Scheduled Reports. Here you will see a list of all your current scheduled reports broken out by frequency. Click "Manage Scheduled Reports" to Delete or Update a Report.

NOTE: You must have an existing saved scheduled report before you can see this menu item.

Menu » Favorites

Favorite Scheduled Report

Current Scheduled Reports:  
Daily Summary (Equity Summary)

File Name:  
DailySummary{DATE}  
(optionally include the string {DATE})

Scheduled Report Name:  
Daily Summary

### PAGINATION

By default, a report will only display the first 25 line items. The top and bottom of each report has pagination functionality which allows you to quickly change your view to see other pages in the report. Clicking 'First' or 'Last' will take you to the first or last page of the report respectively while clicking 'Previous' or 'Next' moves the report one page at a time. You can also just type in the page number you wish to jump to.

### COLUMN HEADERS

You can get more detailed information on many column headers by just mousing over the header name.

Type	Legs	Limit \$	Net	Price				
MKL	2	-0.65	C	-0.65	-0.65 x -0.65		-0.01	-1.00
LMT	2	4.85	D	4.85	4.61 x 5.08		0.00	0.00
LMT	2	0.38		0.00				

### SORTING

Click any column header to sort on a column ascending, denoted by a down arrow on the right side of the column header. Click the column header again to sort descending, denoted by an up arrow. By default, many reports are sorted by 'Order Time' descending.

Tip: Hold the 'Shift' key to sort by a second column and not lose your original sort.

### AUDIT FEATURES

Many of your 'Details' reports will have audit features. Look for the  icon to view the audit trail or leave a comment on any single line item. Use the 'Mass Audit Status' function to add an audit comment to all line items at one time. Click 'Export' on the right, under 'Audit Trail' to export the audit trail to a PDF document. You can export your ALL audit comments for a report by clicking the 'Audit Trail Export' button at the top of the report.

### MARKET TABLE CHART

When viewing the 'Market Data Table,' you can click on the 'Market Data Chart' tab to see your trade versus the market data in a graphical view.

## DASHBOARD

The Dashboard is the first screen you will see when you log into the portal as well as the first item in the Menu list. It provides a quick overview of your assets. The left side of the screen lists your asset classes and the right side gives you a graphical view of each class.

## GRAPHICAL VIEWS

The right side of the dashboard shows a graphical overview of the previous day's orders of the corresponding asset class shown immediately to the left. You can quickly see more detail of your orders by clicking on the graph.

### ROUTE VIEW

By default, you will see the route view. Route view shows you where orders are routing through. Here you can see where orders are being routed and quickly see which routed orders were executed. Drag your cursor over any section of the pie chart to see exact totals. Click on the pie chart to see further detail.

### ENTRY VIEW

Entry view shows you where you are receiving order flow. Here you can quickly see what order flow was executed. Drag your cursor over any section of the pie chart to see exact totals. Click on the pie chart to see further detail.

### EXCHANGE VIEW

Exchange view is a graph that shows you a breakdown of which exchange executed your orders. This view is only available for equities and non-complex options. Complex options do not have an exchange view due to the fact a single order might execute on more than one exchange. Drag your cursor over any section of the pie chart to see exact totals. Click on the pie chart to see further detail.

## ASSET CLASSES

The left side of the dashboard shows a summary of your asset classes for the previous business day. Each asset class shows the date of the orders followed by the orders summary for the corresponding date.

### OPTIONS

A financial derivative that represents a contract sold by one party (option writer) to another party (option holder). The contract offers the buyer the right, but not the obligation, to buy (call) or sell (put) a security or other financial asset at an agreed-upon price (the strike price) over a certain period of time or on a specific date (exercise date). Complex Options (options with multiple legs) will be listed as a separate asset class. Complex options do not have an exchange view due to the fact a single order might execute on more than one exchange.

- Parent Orders Placed - Total number of parent option orders placed on a given day. Click on the total to see more detail.
- Child Orders Placed – Total number of child option orders placed on a given day. Click on the total to see more detail.
- Contacts Executed – Total number of option contracts executed on a given day. Click on the total to see more detail.
- Price Improved \$ - Daily total dollar improvement of contracts that executed at a better price than the bid/ask (expected) price at the time the order was placed. Click on the total to see more detail.
- Slippage \$ - Daily total dollar setback of contracts that executed at a price worse than the bid/ask (expected) price at the time the order was placed. Click on the total to see more detail.

#### EQUITIES

Equities or stocks signify ownership in a corporation and represent a claim on part of the corporation's assets and earnings. Equities (or stocks) are one of the principal asset classes. Equities are orders that originated in the US. Orders that originate outside the US will be listed under a different asset class like "Canadian Equities."

- Parent Orders Placed - Total number of parent orders placed on a given date. Click on the total to see more detail.
- Child Orders Placed – Total number of child orders placed on a given date. Click on the total to see more detail.
- Shares Executed – Total number of actual shares executed on a given date. Click on the total to see more detail.
- Price Improved \$ - Daily total dollar improvement of shares that executed at a better price than the bid/ask (expected) price at the time the order was placed. Click on the total to see more detail.
- Slippage \$ - Daily total dollar setback of shares that executed at a price worse than the bid/ask (expected) price at the time the order was placed. Click on the total to see more detail.

## EQUITIES REPORTS

If your company subscribes to S3's Equities Reporting features, then in the menu dropdown items you will see 'Equities.' Hovering over 'Equities' in the Menu, you may see many clickable submenu items: Exceptions Dashboard, Details, Summary, Limit Performance, and Buyside (VWAP). See [Asset Classes](#) for more information on equities.

## MISSED FILLS

'Missed Fills' is a daily exceptions report that shows which orders were marketable during a specified date range but were not filled. With this report, you can quickly see whether an order was a buy or sell, order type, size, and price compared to the market quote and volume (highlighted in red on the report) at the time of the exception. Note that 'Not Held,' 'Short Sell,' and other orders with special handling are excluded from this report. Also, you can review 'Missed Fills' from either the parent order or route order level using the 'Order Level' filter. For more information on the 'Missed Fills' filters, [click here](#).

## DETAILS

The Equities Details Report gives you a detailed view of your equity orders for a selected date range. By default, the report shows details from the most recent day of trading data collected. There are three tabs on this report: Equity Parent Orders, Equity Child Orders, and Equity Trades. Equity Parent Orders is a detailed view of your “New Orders.” See Appendix for [Equity Parent Order Columns](#) and definitions. Equity Child Orders is typically a detailed view of your “Route Orders.” See Appendix for [Equity Child Order Columns](#) and definitions. If an order has a child order or trade associated, then you can expand the order details to see the order tree. Equity Trades is a detailed view of your trades. See Appendix for [Equity Trades Columns](#). See Appendix for [Equity Trades Columns](#) and definitions.

## SUMMARY

The Equities Summary Report gives you a summarized view of your equity orders for a selected date range. There are two tabs on this report: Equity Parent Summary and Equity Child Summary. Equity Parent Summary is a summarization of your “New Orders.” Equity Child Summary is normally a summarization of your “Route Orders.” See Appendix for [Equity Summary Columns](#) and definitions.

## EQUITIES EXECUTION EFFICIENCY

The Equities Execution Efficiency Report lets you compare equity orders to the full market breadth available. The report compares the volume of executions at or better than the prevailing NBBO against the full market volume available at the NBBO. This allows you to identify orders that provided enhanced liquidity – orders that achieved a better volume than the available market; diminished liquidity – orders that failed to fully execute despite sufficient posted liquidity; and execution efficiency – an overall picture of how well executions performed relative to available liquidity. There are two tabs on this report: Summary and Detail. The summary report is a summarization of your equity’s execution efficiency, while the detail report is a detailed report of all orders eligible for the report. See Appendix for [Execution Efficiency Report Columns](#) and Definitions.

### ELIGIBLE ORDERS AND VOLUME

- Orders must be marketable
- Orders executed must execute while Order is Marketable
- Orders executed must execute “At or Better” than the NBBO

*Note: Orders executed while order is non-marketable or worse than the NBBO are not considered for this report.*

EXECUTION EFFICIENCY DEFINED: Total Eligible Shares Executed “At or Better” than the Target Quote, divided by the Lesser of the # of Shares Ordered or the Market Volume

Example 1: You had 200 Shares that Executed “At or Better” than the Target Quote. Market Volume was 100 and Order Volume was 200. Execution Efficiency would be  $200/100$  (market volume) = 2. (Volume Executed was 2 times more than Market Volume)

Example 2: You had 200 Shares that Executed “At or Better” than the Target Quote. Market Volume was 300 and Order Volume was 200. Execution Efficiency would be  $200/200$  (order volume) = 1 (Exactly 100% of Contracts of the Eligible Orders executed when there was sufficient volume)

Example 3: You had 200 Shares that Executed “At or Better” than the Target Quote. Market Volume was 300 and Order Volume was 400. Execution Efficiency would be  $200/300$  (market volume) = .667 (Only 67% of the Contracts of Eligible orders actually executed)

Example 4: You had 200 Shares that Executed “At or Better” than the Target Quote. Market Volume was 500 and Order Volume was 400. Execution Efficiency would be  $200/400$  (order volume) = .500 (Only 50% of Contracts of Eligible Orders executed)

### ENHANCED E/Q

## LIMIT PERFORMANCE

The Limit Performance report allows you to review the performance of your non-marketable limit orders against the market and public trades. This report includes all route non-marketable limit orders excluding Short Sells as well OTC and PINK listed symbols. See Appendix for [Limit Performance Columns](#) and definitions.

## EQUITY TCA "NOT HELD" REPORTS

The TCA reports are "Not Held" order analyses that allow you to compare historical transactions against several metrics and enhanced algorithms. Not Held Execution analysis reporting allows you to easily analyze larger orders that execute over a longer period time, such as orders being executed via algorithmic trading systems. By comparing these orders to many different metrics, algorithms, traders, and venues you can rest assured you are making the best decisions for even the largest orders.

### TCA PARENT AND CHILD

Unlike traditional TCA tools, which primarily compare the performance of a trade against the performance of other trades and similar business, S3's TCA tools take the analysis a step further by comparing against what could have been. Each individual execution is graded against the national best bid or offer to determine how well each transaction performed.

S3's TCA suite compares each parent and child order to a variety of different benchmarks, including:

- Arrival Time (also known as implementation shortfall) and Price
- Volume Weighted Average Price (VWAP) is measured not only during the trading time, but also during allowed order time, before and after the trade, and during the full day.
- Time Weighted Average Midpoint (TWAM) tracks the market as a whole and determines how your executions compared to what was quoting in the market.

See Appendix for a complete list of [TCA Report Columns](#) and definitions.

## TCA TRADE

S3 evaluates every single execution for a comprehensive determination of transaction cost and execution quality with additional metrics including forward and “backward looking” reversion statistics ( $\pm 1$  and  $\pm 5$  seconds), liquidity charge, and timing consequence and presents this information via graphical and table-based reporting analysis.

## OPTIONS REPORTS

S3 also provides companies with Options Reporting. Options reports include Details and Summary. For more information on Options, see [Asset Classes](#).

### DETAILS

The Options Details Report gives you a detailed view of your options’ orders. Here you will see a complete list of all orders or trades for a selected date range. There are generally three tabs on this report: Option Parent Orders, Option Child Orders, and Option Trades. Option Parent Orders is a list of your “New Orders.” Option Child Orders is a list of your “Route Orders.” And Option Trades is a full list of each individual trade. See Appendix for [Options Orders Details Columns](#) and definitions.

### SUMMARY

The Options Summary Report gives you a summarized view of your option orders for a selected date range. There are two tabs on this report: Option Parent Summary and Option Child Summary. Option Parent Summary is a summarization of your “New Orders.” Equity Child Summary is normally a summarization of your “Route Orders.” See Appendix for [Options Summary Columns](#) and definitions.

## OPTIONS EXECUTION EFFICIENCY

The Options Execution Efficiency Report lets you compare option orders to the full market breadth available. The report compares the volume of executions at or better than the prevailing NBBO against the full market volume available at the NBBO. This allows you to identify orders that provided enhanced liquidity – orders that achieved a better volume than the available market; diminished liquidity – orders that failed to fully execute despite sufficient posted liquidity; and execution efficiency – an overall picture of how well executions performed relative to available liquidity. There are two tabs on this report: Summary and Detail. The summary report is a summarization of your options execution efficiency while the detail report is a detailed report of all contracts orders eligible for the report. See Appendix for [Execution Efficiency Report Columns](#) and Definitions.

### ELIGIBLE ORDERS AND VOLUME

- Orders must be marketable
- Contracts executed must execute while Order is Marketable
- Contracts executed must execute “At or Better” than the NBBO

*Note: Contracts executed while order is non-marketable or worse than the NBBO are not considered for this report.*

EXECUTION EFFICIENCY DEFINED: Total Eligible Contracts Executed “At or Better” than the Target Quote, divided by the Lesser of the # of Contracts Ordered or the Market Volume

Example 1: You had 200 Contracts that Executed “At or Better” than the Target Quote. Market Volume was 100 and Order Volume was 200. Execution Efficiency would be 200/100 (market volume) = 2. (Volume Executed was 2 times more than Market Volume)

Example 2: You had 200 Contracts that Executed “At or Better” than the Target Quote. Market Volume was 300 and Order Volume was 200. Execution Efficiency would be 200/200 (order volume) = 1 (Exactly 100% of Contracts of the Eligible Orders executed when there was sufficient volume)

Example 3: You had 200 Contracts that Executed “At or Better” than the Target Quote. Market Volume was 300 and Order Volume was 400. Execution Efficiency would be 200/300 (market volume) = .667 (Only 67% of the Contracts of Eligible orders actually executed)

Example 4: You had 200 Contracts that Executed “At or Better” than the Target Quote. Market Volume was 500 and Order Volume was 400. Execution Efficiency would be 200/400 (order volume) = .500 (Only 50% of Contracts of Eligible Orders executed)

## COMPLEX OPTIONS REPORTS

In cases where complex option data can be provided, S3 provides reports on complex options detail. For more information on S3’s Complex Options reporting solution please visit <http://s3.com/complex-options/>.

The screenshot shows the S3 Complex Options Reports interface. It includes a navigation menu, a date filter for 12/18/15, and a table of complex orders. The table has columns for Complex Order ID, Status, Entry, Route, Order Time, Underlying, Type, Legs, Limit \$, Net, Price \$, and Synthetic NBBO. Below the main table, there are detailed views for specific legs, including Leg Order ID, Status, Route, Order Time, Side, Size, Symbol, and Type, along with a sub-table for Part, Exchange, Trade Time, Trade Size, Price \$, and Target Quote.

Complex Order ID	Status	Entry	Route	Order Time	Underlying	Type	Legs	Limit \$	Net	Price \$	Synthetic NBBO

## TRADE SURVEILLANCE REPORTING

S3's **Trade Surveillance Suite (TSS)** allows clients to monitor trading for a variety of restricted behaviors across multiple asset classes, including Market Manipulation and other Trade-based regulatory reporting.

The TSS currently monitors for the following:

### EQUITIES/OPTIONS: MARKING THE CLOSE

Marking the Close

- Client volume in close period is more than x% of market volume in the same period.
- Client volume in close period is more than x% of the total client volume for the day.

#### EQUITIES/OPTIONS: TRADE THROUGH

- Trade Through - Scan all NBBO quotes within a set number of seconds before and after the trade. If there is no quote at the trade price generate an exception.

#### EQUITIES/OPTIONS: LAYERING

- Layering - Layering exception will look for orders placed off the NBBO that are within a set number of ticks of the NBBO. The goal is to look for the appearance of interest on one side of the market when there is no intention to trade on that side of the market.

#### EQUITIES/OPTIONS: SPOOFING

- Spoofing - Spoofing occurs when a layer event has been triggered and there is a trade on the opposite side of the market within a set number of seconds

#### EQUITIES/OPTIONS: REG SHO

- Reg SHO - Check all symbols in REG SHO state (list curated from listing exchange). If a short sell trades at less than or equal to the NBBO bid price, generate an exception.

#### CROSS PRODUCT (EQUITIES AND OPTIONS): DATA MANIPULATION

- Equity-Options manipulation ("Mini-manipulation")

## EXCEPTIONS

The TSS Exceptions Report gives you a summary of all trade exceptions for a given date range. From here you can quickly see your Exception Types as well as the number of Resolved and Unresolved Exceptions. See Appendix for [Trade Surveillance Exceptions Columns](#) and definitions.

## COMPLIANCE REPORTS

Along with Equity and Options Reporting, S3 provides many customers with their 605 and 606 compliance reporting.

### RULE 605 REPORT

Under Rule 605, market centers that trade National Market System securities are required to make available to the public monthly electronic reports that include uniform statistical measures of execution quality. S3's Rule 605 Report gives you a way to view, filter, and drill into your Public 605 Data.

## RULE 606(A) REPORT

Under Rule 606a of SEC Regulation NMS, broker-dealers that route customer orders in options or “Held” equity securities are required to make publicly available quarterly reports that, among other things, identify the venues to which customer orders are routed for execution along with any associated net fees or rebates. S3’s Rule 606a Report gives you a way to view, filter, and drill into your Public 606 Data. The Portal has two tabs: 606 Analysis and 606 Audit. The 606 Analysis gives you a quarterly view while the 606 Audit gives you your 606 Order Details for a selected Date Range.

### 606A ANALYSIS

The 606a Analysis Tab has many features. Along the left side of the page you can filter by Date (Quarter) or Symbol Group. You can also choose to view your 606a orders as a percentage of routes or total routed orders. If you have routes that have been excluded from your public 606a because of the 90% rule, they will also be excluded from the default view. You can see any excluded routes using the ‘Excluded Routes’ filter.

### 606A AUDIT

The 606(a) Audit tab allows you to view the details and verify the orders in your 606(a) report. When using the same Date and Security Type filters, you can see exactly which orders make up your 606(a) report. The filters on this report also allow you to view 'Excluded Orders' or search for specific order IDs.

### RULE 606(B)(3) REPORT

Under Rule 606 of SEC Regulation NMS, Rule 606(b)(3) requires a broker-dealer, upon request of its customer, to provide specific disclosures related to the routing and execution of the customer's NMS stock orders submitted on

a not held basis for the prior six months along with any associated net fees or rebates. S3's Rule 606b3 Reporting gives users the ability to quickly view and export requested 606b3 reports in the required PDF and XML formats. The Portal has four tabs: Analysis, Audit, Look-Through Analysis, and Look-Through Audit.

### 606B3 ANALYSIS

The 606b3 Analysis Report gives you the ability to filter by Account and Date then export the required 606b3 PDF and XML reports. Choose the date range for which the client has requested, then filter by Account or Order ID. You can enter multiple Account or Order IDs by using a comma delimiter.

## APPENDIX C: REPORT FILTERS FOR EQUITES AND OPTIONS

- Date – Found on most reports, the ‘Date’ filter allows you to filter by a specific date or date range.
- Entry Firm – Allows you to filter on from where your orders are being received.
- Symbol / List – Allows you to filter by a specific symbol or symbol list. You can create your own symbol list under [‘Class List Management’](#).
- Order Type – Allows you to filter by whether the order is marked as a Market, Limit, Marketable Limit, Stop, or Stop Limit order. Market and Marketable Limit orders are considered ‘Marketable Orders’.
- Order Size – Allows you to filter by the order size. For equities, the filter is based on number of shares. For options, it is based on the number of contracts.
- Notional (Order) – Allows you to filter by the notional value of the order. Notional Value is determined by the executed order size multiplied by the average execution price.
- Oversized Orders – Allows you to filter by orders that may have oversized the market. Oversized orders are those that are at least 10x the aggregated BBO volume at the NBBO price point (depending if it's a buy or sell) at the time of order placement.
- AON – Allows you to filter by orders tagged as “All or None”. “All or None” is a client instruction to execute the full order or else don’t execute the order at all.

- Not Held – Allows you to filter by orders tagged as “Held” or “Not Held”. A “Held” order is a market order that requires prompt execution for an immediate fill. Most retail order flow is considered “Held” order flow. A “Not Held” order, provides traders with both time and price discretion to try and get a better fill. Most institutional order flow is typically “Not Held” order flow.
- Modifiers / Conditions – Allows you to filter by orders tagged with special handling conditions or orders that were placed while the market locked, crossed, or halted. See [Market Data Table](#) for more information.
- Covered Orders – Allows you to filter by orders tagged by S3 as 605 eligible.
- Listing Exchange – Allows you to filter by orders for symbols listed on a specific stock exchange.

#### APPENDIX D: EQUITIES DETAILS COLUMNS (PARENT ORDERS)

- Parent Order ID – Order ID of the Parent Order or “New Order”
- Entry – Entry Firm
- Status – Last reported status of the Order
- Order Time – Time when the Parent Order was placed
- Side – (B)uy or (S)ell
- Size – Order Volume of Parent Order
- Symbol – Equity Symbol being traded
- Type – Order Type
  - MKT – Market
  - LMT – Limit
  - MKL – Marketable Limit
  - STP – Stop
  - STL – Stop Limit
- Limit \$ - Limit Price of the Order
- Stop \$ - Stop Price of Order
- Notional \$ (Order) – Notional Dollar Value of “Filled” Order
- Variance \$ - Total variance of executed trades of the Parent Order in dollars between trade price and quote match price (using client defined time of execution match mode)
- EFQ – Effective Spread divided by Quoted Spread
- TIF – Time in Force of the Order
  - DAY – Day Order
  - FOK – Fill or Kill
  - GTC – Good til Cancelled
  - GTD – Good til Date
  - IOC – Immediate or Cancel
- Expiration Time – Parent Order Expiration Time
- Firm Trader ID – Trader ID assigned to the Parent Order
- Order Account ID – Account ID of Parent Order
- DO – Direct Order
- DNR – Do Not Reduce
- AON – All or None
- NH – Not Held
- FAO – Fill at Open
- FAC – Fill at Close
- Manual – Manual Order

- Pre Market – Orders allowed to trade before Open
- Post Market – Orders allowed to trade after Close
- Audit Status – S3 Portal Audit Status
  - None
  - Resolved
  - Under Review
- 605 Order Type – Rule 605 Order Type at Time Order was Received
  - MKL – Marketable Limit
  - MKT – Market
  - NQL – Near or Outside the Quote
  - AQL – At the Quote
  - IQL – Inside the Quote

#### APPENDIX E: EQUITIES DETAILS COLUMNS (CHILD ORDERS)

- Parent Order ID - Order ID of the Parent Order or “New Order”
- Child Order ID – Order ID of the Child or “Route Order”
- Entry – Entry Firm
- Route – Route Firm
- Status – Last reported status of the Order
- Route Time – Time when the Child Order was routed
- Side – (B)uy or (S)ell
- Size – Order Volume of Child Order
- Symbol – Equity Symbol being traded
- Type – Order Type
  - MKT – Market
  - LMT – Limit
  - MKL – Marketable Limit
  - STP – Stop
  - STL – Stop Limit
- Limit \$ - Limit Price of the Child Order
- Stop \$ - Stop Price of the Child Order
- Notional \$ (Order) – Notional Dollar Value of “Filled” Order
- Variance \$ - Total variance of executed trades of the Child Order in dollars between trade price and quote match price (using client defined time of execution match mode)
- EFQ – Effective Spread divided by Quoted Spread
- Route Speed – Time in seconds from Parent Order Time to time the order was routed.
- TIF – Time in Force of the Child Order
  - DAY – Day Order
  - FOK – Fill or Kill
  - GTC – Good til Cancelled
  - GTD – Good til Date
  - IOC – Immediate or Cancel
- Expiration Time – Route Order Expiration Time
- Firm Trader ID – Trader ID assigned to the Route Order
- Order Account ID – Account ID of Parent Order

- DO – Direct Order
- DNR – Do Not Reduce
- AON – All or None
- NH – Not Held
- FAO – Fill at Open
- FAC – Fill at Close
- Manual – Manual Order
- Pre Market – Orders allowed to trade before Open
- Post Market – Orders allowed to trade after Close
- Audit Status – S3 Portal Audit Status
  - None
  - Resolved
  - Under Review

## APPENDIX F: EQUITIES DETAILS COLUMNS (TRADES)

- Parent Order ID – ID of Parent Order
- Child Order ID – ID of Route Order
- Part – Trade Part
- Entry – Parent Order Entry Firm
- Route – Route Order Firm
- Exchange – Exchange where Trade occurred
- Status – Order Status (Parent or Route, depending on “Order Filter Level”)
- Trade Time – Time of Trade Execution
- Side – (B)uy or (S)ell
- Order Size – Order Size (Parent or Route, depending on “Order Filter Level”)
- Trade Size – Size of Trade Execution
- Symbol – Order Symbol
- Type – Order Type (Parent or Route, depending on “Order Filter Level”)
- Limit \$ - Limit Price (Parent or Route, depending on “Order Filter Level”)
- Stop \$ - Stop Price (Parent or Route, depending on “Order Filter Level”)
- TIF – Time in Force (Parent or Route, depending on “Order Filter Level”)
- Price \$ - Execution Price
- Notional \$ (Order) – Total Value of Executed Order (Parent or Route, depending on “Order Filter Level”)
- Notional \$ (Trade)- Total Value of Shares Executed for the given Trade
- Trade Speed – Time in Seconds from when the Order was received or routed (Depending on “Order Filter Level”) to Trade Execution Time
- Target Quote – Quote in which Trade Price is compared to. Execution Match Type is Client Defined
  - TBM – Time Became Marketable
  - TOP – Time of Placement
  - TEX – Time of Execution
- Target Size – Market Volume at Time of Target Quote Match
- Variance \$ - In Dollars, Difference Between Executed Shares\*Price and Executed Shares\*Target Quote for the given Trade
- Variance % - Percent of Variance per Share as defined as "Variance per Share / Action Price"
- EFQ – Effective Spread / Quoted Spread
- Action Party Type – Action Party Type

#### APPENDIX G: EQUITY SUMMARY COLUMNS

- Date – Order Date
- Entry – Entry Firm
- Route – Route Firm (Child Summary Only)
- Symbol – Equity Symbol on the Order
- Type – Order Type
  - MKT – Market
  - LMT – Limit
  - MKL – Marketable Limit
  - STP – Stop
  - STL – Stop Limit
- Order Size – Size of Order
- Orders Placed – Total Number of Orders Placed, Excluding Manual and Rejected Orders
- Orders Filled – Total Number of Orders Filled having at least One Filled Order
- Shares Placed – Total Number of Shares Placed Excluding Orders with Manual or Rejected Status
- Trades – Total Number of Executed Trades
- Shares Executed – Total Number of Shares Executed, Excluding Orders with a Status or Manual or Rejected
- Notional \$ (Trade) - Total Value of Shares Executed
- Speed - Share Weighted Average Number of Seconds from when the Order became Marketable (TBM1) to the Trade Time in Milliseconds
- Effective Spread – Share Weighted Average Spread Calculated by Taking the Difference between the Actual Trade Price and the Midpoint of the Ask and Bid Price and Multiplied by Two. Ask and Bid Price is Determined Using Client Defined Time of Execution Match
- Quoted Spread – Share Weighted Average Difference between Ask and Bid Price Using Client Defined Time of Execution Match
- Realized Spread – Spread Calculated by Taking Difference of Execution Price and Midpoint of the Quoted Price Five Minutes after Execution and Multiplied by Two.
- EFQ – Effective Spread Divided by the Quoted Spread
- At or Better % - Total Percentage of Shares that Executed at or better than the NBBO
- Price Improved % - Total Percentage of Shares that Executed

*Note: NBBO Quote Will Vary Depending on Client Defined Time of Execution Match*

- better than the NBBO
- Price Improved \$ - Total Dollar Amount of Price Improvement Only Counting Shares that Executed Better than the NBBO
- Price Improvement Per Share – Total Dollar Amount of Price Improvement Divided by Number of Shares Executed Better than the NBBO
- Slippage % - Total Percentage of Shares that Executed Worse than the NBBO
- Slippage \$ - Total Dollar Amount of Slippage Only Counting Shares that Executed Worse than the NBBO
- Variance \$ - Total Net Variance, Includes Price Improved \$ and Slippage \$
- Avg Variance \$ - Average Net Variance, Includes Price Improved \$ and Slippage \$
- Avg Shares Placed – Average shares per order. Total shares divided by total orders
- Pct Shares Executed – Percent of total shares placed that executed
- PI Shares – Total number of shares with price improvement
- Slippage Shares – Total number of shares with slippage
- At or Better Shares – Total number of shares that executed at or better than NBBO

#### APPENDIX H: LIMIT PERFORMANCE COLUMNS (SUMMARY)

- Date – Route Order Date
- Entry – Entry Firm
- Route – Route Firm
- Symbol – Order Symbol
- Order Type – Order Type at the Time of **Parent Order** was received
  - MKL – Marketable Limit
  - MKT – Market
  - NQL – Near the Quote (within 10 cents)
  - AQL – At the Quote
  - IQL – Inside the Quote
  - LMT – Away from the Quote (More than 10 cents away)
- Order Size – Size of Routed Order
- Public Trades – ‘Y’ or ‘N’ Flag that indicates if there were any public shares trade for the symbol on the order ‘At or Better’ than the Route Order Limit Price after Time of Route while the order was live.
- Public Exchange Trades - Were there any public shares traded at exchanges (excluding TRF) at or better than the order's limit price while the order was live.
- Orders – Total Number of Route Orders
- Ordered Shares – Total Number of Ordered Shares
- Shares – Total Number of Shares Executed
- Nql Time – Average Number of Milliseconds the Route Orders were ‘Near or Outside the Quote’
- Nql Count – Average Number of times the Route Orders were ‘Near or Outside the Quote’
- Aql Time – Average Number of Milliseconds the Route Orders were ‘At the Quote’
- Aql Count – Average Number of times the Route Orders were ‘At the Quote’
- Iql Time – Average Number of Milliseconds the Route Orders were ‘Inside the Quote’
- Iql Count – Average Number of times the Route Orders were ‘Inside the Quote’
- Mkl Time – Average Number of Milliseconds the Route Orders were Marketable
- Mkl Count – Average Number of times the Route Orders were Marketable
- Fill Rate – Executed Shares divided by Ordered Shares

*Note: Filter should be left blank to indicate no limit. Example: From: 100, To: blank indicates 100 to infinity.*

- Execution Percentile Exchanges Only - Average Execution Percentile where Execution Percentile equals Routed Shares Executed / (Routed Shares Executed + Shares Executed 'At or Better' than the Limit Price across all Exchanges excluding TRF (Trade Reporting Facility) while the order was live)
- Execution Percentile - Average Execution Percentile where Execution Percentile equals Routed Shares Executed / (Routed Shares Executed + Shares Executed 'At or Better' than the Limit Price cross all Exchanges while the order was live)
- TIF – Time in Force
- Status – Order Status
  - O – Open
  - F – Filled
  - P – Partial Fill
  - C – Canceled
  - RJ – Rejected
  - X – Expired
  - CR – Cancel Replace
  - M - Manual

#### APPENDIX I: LIMIT PERFORMANCE FILTERS

- Date – Date of Routed Orders. Filter is defaulted to most recent day of data
- Entry Firms – Allows you to filter your report down to one or many entry firms
- Route Firms – Allows you to filter your report down to one or many route firms
- Order Types – Order Type at the Time the **Parent Order** was received.
  - MKL – Marketable Limit Order
  - MKT – Market Order
  - NQL – Near the Quote (within 10 cents)
  - AQL – At the Quote
  - IQL – Inside the Quote
  - LMT – Away from the Quote (more than 10 cents away)
- Order Size – Size of Route Order
- NOQL Time – Time in Milliseconds a Routed Limit Order was 'Near or Outside' the Quote while the order was live
- NOQL Count – Number of Times a Routed Limit Order was 'Near or Outside' the Quote while the order was live
- AQL Time – Time in Milliseconds a Routed Limit Order was 'At the Quote' while the order was live
- AQL Count – Number of Times a Routed Limit Order was 'At the Quote' while the order was live
- IQL Time – Time in Milliseconds a Routed Limit Order was 'Inside the Quote' while the order was live
- IQL Count – Number of Times a Routed Limit Order was 'Inside the Quote' while the order was live
- MKL Time – Time in Milliseconds a Routed Limit Order was Marketable while the order was live
- MKL Count – Number of Times a Routed Limit Order was Marketable while the order was live
- At or Better Count – Number of Times a Routed Limit Order was 'At or Better' ('At the Quote', 'Inside the Quote', or Marketable) while the order was live
- Exec Percentile Exch – Allows you to filter on Orders with Average Percent Range where Execution Percentile equals Routed Shares Executed / (Routed Shares Executed + Shares Executed 'At or Better' than the Limit Price across all Exchanges excluding TRF (Trade Reporting Facility) while the order was live)

- Exec Percentile – Allows you to filter on Orders with Average Percent Range where Execution Percentile equals Routed Shares Executed / (Routed Shares Executed + Shares Executed 'At or Better' than the Limit Price cross all Exchanges while the order was live)
- Public Trades – Allows you to filter on Routed Limit Orders where the symbol on the order was publicly traded 'At or Better' than the limit price on the order while the order was live
- Public Exchange Trades – Allows you to filter on Routed Limit Orders where the symbol traded on public exchange (excluding 'TRF') 'At or Better' than the order limit price while the order was live
- Time in Force – Time in force of the routed order
  - DAY – Day order
  - FOK – Fill or Kill
  - GTC – Good til Cancel
  - GTD – Good til Date
  - IOC – Immediate or Cancel
- Not Held Orders – Allows you to filter on or out 'Not Held' orders.
- Order Status – Allows you to filter on current status of the order.
  - O – Open
  - F – Filled
  - P – Partial Fill
  - C – Canceled
  - RJ – Rejected
  - X – Expired
  - CR – Cancel Replace
  - M - Manual
- Executed Shares – Allows you to filter Orders by Number of Shares Executed
- P Shares Exec Exch – Allows you to filter on Number of Orders Executed across all Exchanges excluding TRF (Trade Reporting Facility) where Public Shares traded for the order symbol 'At or Better' than the Order Limit Price while the order was live
- P Shares Exec – Allows you to filter on Number of Orders Executed across all Exchanges where Public Shares traded for the order symbol 'At or Better' than the Order Limit Price while the order was live

#### APPENDIX J: EQUITY TCA REPORT COLUMNS (SUMMARY)

- Date – Order Date when using 'Group by Month' or 'Group by Day'
- Symbol – Order Symbol
- Side - Buy(B), Sell(S) or Short Sell(SS)
- Entry - Entry Firm
- Order Type – Order Type (MKT, LMT, Etc...)
- Parent / Child Algo ID – Algorithm ID
- Parent / Child Firm Trader ID – ID of Trader
- % of ADV – Percent of Average Daily Volume
- Arrival Spread (BP) – Spread at the Arrival Time in Basis Points
- Participation Rate – Order Percentage of Total Market Volume
- Fill Rate – Percent of Orders Filled
- Order Count – Number of Parent Orders Placed
- Volume – Sum of Ordered Shares
- Filled volume – Sum of Ordered Shares Filled
- Order duration – Length of Time Order was Open in Milliseconds

*Note: One Basis Point is equal to 1/100<sup>th</sup> of 1%, or 0.01% (0.0001), and is used to denote the percentage change in a financial instrument.*

- Open Variance – Average Price Difference between Open Price and Execution Price
- Var vs Open (BP) - Average Difference between the Execution Price and the Open Price in Basis Points
- Open Total Variance – Total Filled Volume Multiplied by Open Variance Price
- Previous Close Variance – Average Price Difference between Previous Close Price and Execution Price
- Var vs Prev Close (BP) - Average Difference between the Execution Price and the Previous Close Price in Basis Points
- Previous Close Total Variance – Total Filled Volume Multiplied by Previous Close Variance Price
- Var vs Arrival Price \$ - Average Difference between the Execution Price and Arrival (Midpoint) Price
- Var vs Arrival Price (BP) - Average Difference between the Execution Price and Arrival (Midpoint) Price in Basis Points
- Var vs Arrival Price Total \$ - Total Filled Volume Multiplied by Arrival (Midpoint) Variance Price
- Var vs Live TWAM \$ - Average Difference between the Time Weighted Average Midpoint and the Execution Price
- Var vs Live TWAM (BP) - Average Difference between the Time Weighted Average Midpoint and the Execution Price in Basis Points
- Var vs Live TWAM Total \$ - Total Filled Volume Multiplied by TWAM Variance Price
- Var vs All Day VWAP \$ - Average Difference between the Execution Price and the Day's Volume Weighted Average Price
- Var vs All Day VWAP (BP) - Average Difference between the Execution Price and the Day's Volume Weighted Average Price in Basis Points
- Var vs All Day VWAP Total \$ - Total Filled Volume Multiplied by All Day VWAP Variance
- Var vs Prior To Order VWAP \$ - Average Difference between the Execution Price and the VWAP for the Time between the Open and When the Order Could First Start Executing
- Var vs Prior To Order VWAP (BP) – Average Difference between the Execution Price and the Volume Weighted Average Price for the Time between the Open and When the Order Could First Start Executing in Basis Points
- Var vs Prior To Order VWAP Total \$ - Total Filled Volume Multiplied by Prior To Order VWAP Variance Price
- Var vs VWAP \$ - Average Difference between the Execution Price and the VWAP for the Allowed Period of Execution (Live Time)
- Var vs VWAP (BP) - Average Difference between the Execution Price and the VWAP for the Allowed Period of Execution (Live Time) in Basis Points
- Var vs VWAP Total \$ - Total Filled Volume Multiplied by VWAP Variance Price
- Var vs Avg Tape Trade \$ - Average Difference between the Execution Price and the Unweighted Average Tape Trade Price for the Allowed Period of Execution (Live Time)
- Var vs Avg Tape Trade (BP) - Average Difference between the Execution Price and the Unweighted Average Tape Trade Price for the Allowed Period of Execution (Live Time) in Basis Points
- Var vs Avg Tape Trade Total \$ - Total Filled Volume Multiplied by Average Tape Trade Variance Price
- Var vs Executed Time VWAP \$ - Average Difference between Execution Price and VWAP at the Time of Execution
- Var vs Executed Time VWAP (BP) - Average Difference between Execution Price and VWAP at the Time of Execution in Basis Points
- Var vs Executed Time VWAP Total \$ - Total Filled Volume Multiplied by Executed Time VWAP Variance Price
- Var vs Rest Of Day VWAP \$ - Average Difference between the Execution Price and the VWAP for the Time from Execution to the Close Price

Note: Live Time is the time from when an order is allowed to execute to the order expiration time.

- Var vs Rest Of Day VWAP (BP) - Average Difference between the Execution Price and the VWAP for the Time from Execution to the Close Price in Basis Points
- Var vs Rest Of Day VWAP Total \$ - Total Filled Volume Multiplied by Rest of Day VWAP Variance Price
- Var vs Take \$ - Average Difference between each Execution Price and the Quoted Price to Take Liquidity at the Time of Execution
- Var vs Take (BP) - Average Difference between each Execution Price and the Quoted Price to Take Liquidity at the Time of Execution in Basis Points
- Var vs Take Total \$ - Total Filled Volume Multiplied by Take Variance Price

## APPENDIX K: EQUITY TCA REPORT COLUMNS (DETAILS)

- Chart – Detailed Chart of Executions for a Given Order (Details only)
- Symbol – Order Symbol
- Side - Buy(B), Sell(S) or Short Sell(SS)
- Volume – Sum of ordered shares (Details only)
- Filled volume – Sum of ordered shares filled
- Order Time – Date and Time of Order Placement (Details only)
- Order Type – Order Type (MKT, LMT, Etc...)
- TIF – Time In Force (Details only)
- Parent / Child Order ID – Order ID (Details only)
- CL Order ID – Unique identifier as assigned by institution (Details only)
- Status –(C)anceled, (F)illed, or e(X)pired (Details only)
- Route Firm – Route firm (Details only)
- Limit \$ - Order Limit Price (Details only)
- Stop \$ - Order Stop Price (Details only)
- Order Account ID – (Details only)
- Close Datetime – Time Order Closed (Details only)
- Parent / Child Algo ID – ID of Algorithm
- SIC Code – Standard Industrial Classification (Details only)
- Avg Price – volume-weighted avg execution price (Details only)
- Low / High Price – lowest / highest fill price for parent order (Details only)
- First / Last Price – fill price for the first / last execution of the parent order (Details only)
- First Executed Variance – diff between execution price and fill price of the first executed parent order (Details only)
- Last Executed Variance – diff between execution price and fill price of the last executed parent order (Details only)
- ADV – Average Daily Volume (Details only)
- % of ADV – Percent of Average Daily Volume
- Order Duration – length of time order was open in milliseconds
- Previous Close Price – close price of previous day (Details only)
- Previous Close Variance – avg diff between execution price and previous day's close price
- Var vs. Previous Close (BP) – avg diff between execution price and previous day's close price in basis points
- Previous Close Total Variance – total filled volume multiplied by previous close variance price
- Open Price – open price

- Open Variance – diff between execution price and open price
- Var vs. Open (BP) – avg diff between avg execution price and the open price in basis points
- Open Total Variance – total filled volume multiplied by open variance price
- Arrival Price – midpoint at the time of eligibility (Details only)
- Var vs. Arrival Price \$ - avg difference between avg execution price and arrival midpoint
- Var vs. Arrival Price (BP) – avg difference between avg execution price and arrival midpoint in basis points
- Var vs. Arrival Price Total \$ - total difference between avg execution price and arrival price in dollars
- Arrival Quote – quote at the arrival time (Details only)
- Arrival Spread – spread at the arrival time
- Arrival Spread (BP) – Spread at the arrival time in basis points
- Live TWAM – Time Weighted Average Price
- Var vs Live TWAM \$ - Average Difference between the Time Weighted Average price midpoint and the execution price
- Var vs Live TWAM (BP) - Average Difference between the Time Weighted Average Midpoint and the Execution Price in Basis Points
- Var vs Live TWAM Total \$ - Total Filled Volume Multiplied by TWAM Variance Price
- Var vs All Day VWAP \$ - Average Difference between the Execution Price and the Day's Volume Weighted Average Price
- Var vs All Day VWAP (BP) - Average Difference between the Execution Price and the Day's Volume Weighted Average Price in Basis Points
- Var vs All Day VWAP Total \$ - Total Filled Volume Multiplied by All Day VWAP Variance
- Var vs Prior To Order VWAP \$ - Average Difference between the Execution Price and the VWAP for the Time between the Open and When the Order Could First Start Executing
- Var vs Prior To Order VWAP (BP) – Average Difference between the Execution Price and the Volume Weighted Average Price for the Time between the Open and When the Order Could First Start Executing in Basis Points
- Var vs Prior To Order VWAP Total \$ - Total Filled Volume Multiplied by Prior To Order VWAP Variance Price
- Var vs VWAP \$ - Average Difference between the Execution Price and the VWAP for the Allowed Period of Execution (Live Time)
- Var vs VWAP (BP) - Average Difference between the Execution Price and the VWAP for the Allowed Period of Execution (Live Time) in Basis Points
- Var vs VWAP Total \$ - Total Filled Volume Multiplied by VWAP Variance Price
- Average Tape Trade – Unweighted average tape trade price
- Var vs Avg Tape Trade \$ - Average Difference between the Execution Price and the Unweighted Average Tape Trade Price for the Allowed Period of Execution (Live Time)
- Var vs Avg Tape Trade (BP) - Average Difference between the Execution Price and the Unweighted Average Tape Trade Price for the Allowed Period of Execution (Live Time) in Basis Points
- Var vs Avg Tape Trade Total \$ - Total Filled Volume Multiplied by Average Tape Trade Variance Price
- Var vs Executed Time VWAP \$ - Average Difference between Execution Price and VWAP at the Time of Execution
- Var vs Executed Time VWAP (BP) - Average Difference between Execution Price and VWAP at the Time of Execution in Basis Points
- Var vs Executed Time VWAP Total \$ - Total Filled Volume Multiplied by Executed Time VWAP Variance Price

Note: Live Time is the time from when an order is allowed to execute to the order expiration time.

- Var vs Rest Of Day VWAP \$ - Average Difference between the Execution Price and the VWAP for the Time from Execution to the Close Price
- Var vs Rest Of Day VWAP (BP) - Average Difference between the Execution Price and the VWAP for the Time from Execution to the Close Price in Basis Points
- Var vs Rest Of Day VWAP Total \$ - Total Filled Volume Multiplied by Rest of Day VWAP Variance Price
- Var vs Take \$ - Average Difference between each Execution Price and the Quoted Price to Take Liquidity at the Time of Execution
- Var vs Take (BP) - Average Difference between each Execution Price and the Quoted Price to Take Liquidity at the Time of Execution in Basis Points
- Var vs Take Total \$ - Total Filled Volume Multiplied by Take Variance Price
- Participation Rate – Order Percentage of Total Market Volume
- Fill Rate – Percent of Orders Filled
- Expected Cost per Share – Expected cost per share
- Expected Cost per Share (BP) – Expected cost per share in Basis Points
- Average Expected Cost – Expected cost of the order
- Var vs Expected Cost \$ - Variance of expected cost versus actual order cost
- Var vs Expected Cost (BP) – Variance of expected cost versus actual order cost in basis points

#### APPENDIX L: OPTION DETAILS COLUMNS (PARENT ORDERS)

- Parent Order ID – Order ID of the New Order
- Entry – Entry Firm
- Status – Order Status
- Order Time – Time of New Order
- Side – Buy or Sell Side
- Size – Order Size or Volume
- Symbol – Listing Symbol
- Type – Order Type (MKT, LMT, etc...)
- Limit \$ - Limit Price if Limit Order
- Stop \$ - Stop Price if Stop Order
- Variance \$ - Price Difference between Trade Price and NBBO Multiplied by Order Size
- EFQ – Effective Spread divided by Quoted Spread
- TIF – Time in Force
- Expiration Time – Order Expiration Time if Applicable
- Firm Trader ID – Firm Trader ID if Applicable
- Order Account ID – Order Account ID if Applicable
- DO – Directed Order (Special Handling Instruction)
- ND – Non-Directed (Special Handling Instruction)
- DNR – Do Not Reduce (Special Handling Instruction)
- AON – All or None (Special Handling Instruction)
- NH – Not Held (Special Handling Instruction)
- FAO – Fill at Open (Special Handling Instruction)
- FAC – Fill at Close (Special Handling Instruction)
- Manual – Manual (Special Handling Instruction)
- Pre Market – Pre Market Order (Special Handling Instruction)

*Note: NBBO Quote Will Vary Depending on Client Defined Time of Execution Match*

- Post Market – Post Market Order (Special Handling Instruction)
- Audit Status – Audit Status within S3 Portal
- Spread Size – Group of Quoted Spread Size
  - \$.01
  - \$.02
  - \$.03
  - \$.04
  - \$.05
  - \$.06-\$.10
  - \$.11-\$.15
  - >\$.15
  - Locked
  - Crossed
  - Halted
- Entry Type – Order Type at time of placement or entry
- Midpoint Group – Group in which trade price is categorized
  - Near – For Buys: trade price is in lower 1/3 of spread or less. For Sells: trade price is in upper 1/3 of spread or greater
  - Far – For Buys: trade price is in upper 1/3 of spread or greater. For Sells: trade is in lower 1/3 of spread or less
  - Middle – Trade price in middle 1/3 of quoted spread
  - N/A – No Quoted Spread available

#### APPENDIX M: OPTION SUMMARY COLUMNS

- Date – Order Date
- Entry – Entry Firm
- Route – Route Firm (Child Summary Only)
- Symbol – Option Symbol on the Order
- Type – Order Type
  - MKT – Market
  - LMT – Limit
  - MKL – Marketable Limit
  - STP – Stop
  - STL – Stop Limit
- Order Size – Size of Order by bucket size
  - 1-10
  - 11-25
  - 26-50
  - 51-100
  - 101-500
  - 500+
- Spread Size – Group/Bucket of quoted spread
  - \$.01
  - \$.02
  - \$.03

- \$.04
- \$.05
- \$.06-\$.10
- \$.11-\$.15
- >\$.15
- Locked
- Crossed
- No Quote
- Midpoint Group -- Group in which trade price is categorized
  - Near – For Buys: trade price is in lower 1/3 of spread or less. For Sells: trade price is in upper 1/3 of spread or greater
  - Far – For Buys: trade price is in upper 1/3 of spread or greater. For Sells: trade is in lower 1/3 of spread or less
  - Middle – Trade price in middle 1/3 of quoted spread
  - N/A – No Quoted Spread available
- Entry Type – Order Type at time of Entry
  - AQL – At the quote
  - IQL – Inside the quote
  - MKL – Marketable limit
  - MKT – Market
  - NOQL – Near or Outside the quote
  - STL – Stop Limit
  - STP – Stop
- NH – Indicator for ‘Not Held’ orders. ‘1’ = ‘Not Held’
- Orders Placed – Total Number of Orders Placed, Excluding Manual and Rejected Orders
- Orders Filled – Total Number of Orders Filled having at least One Filled Order
- Contracts Placed – Total Number of Contracts Placed Excluding Orders with Manual or Rejected Status
- Trades – Total Number of Executed Trades
- Contracts Executed – Total Number of Contracts Executed, Excluding Orders with a Status or Manual or Rejected
- Notional \$ - Total Value of Contracts Executed
- Speed - Weighted Average Number of Seconds from when the Order became Marketable (TBM1) to the Trade Time in Milliseconds
- Effective Spread – Contract Weighted Average Spread Calculated by Taking the Difference between the Actual Trade Price and the Midpoint of the Ask and Bid Price and Multiplied by Two. Ask and Bid Price is Determined Using Client Defined Time of Execution Match
- Quoted Spread – Contract Weighted Average Difference between Ask and Bid Price Using Client Defined Time of Execution Match
- EFQ – Effective Spread Divided by the Quoted Spread
- At or Better % - Total Percentage of Contracts that Executed at or better than the NBBO
- Price Improved % - Total Percentage of Contract that Executed better than the NBBO
- Price Improved \$ - Total Dollar Amount of Price Improvement Only Counting Contracts that Executed Better than the NBBO
- Price Improvement Per Contract – Total Dollar Amount of Price Improvement Divided by Number of Contracts Executed Better than the NBBO
- Slippage % - Total Percentage of Contracts that Executed Worse than the NBBO

- Slippage \$ - Total Dollar Amount of Slippage Only Counting Contracts that Executed Worse than the NBBO
- Variance \$ - Total Net Variance, Includes Price Improved \$ and Slippage \$
- Avg Variance \$ - Average Net Variance, Includes Price Improved \$ and Slippage \$
- Avg Contracts Placed – Average Contracts per order. Total contracts divided by total orders
- Pct Contracts Executed – Percent of total contracts placed that executed
- PI Contracts – Total number of contracts with price improvement
- Slippage Contracts – Total number of contracts with slippage
- Distance From Midpoint – Difference between midpoint of target quote and trade price.
  - For Sells – Trade Price minus Midpoint
  - For Buys – Midpoint minus Trade Price

#### APPENDIX N: EXECUTION EFFICIENCY COLUMNS (SUMMARY)

- Date – Month or Day of Order when using “Group By”
- Entry – Entry Firm
- Route – Route Firm
- Orders Placed – Sum of Total Orders Placed for a given Date or Date Range that had Eligible Contracts/Shares
- Contracts/Shares Placed – Sum of Total Contracts/Shares Placed on Orders with Eligible Contracts for a given Date or Date Range
- Eligible Contracts/Shares Executed – Contracts/Shares that executed “At or Better” than the Target Quote when the order was initially marketable.
- Symbol – Symbol on the Order
- Type – Order Type
  - MKT – Market
  - LMT – LMT
  - MKL – Marketable Limit
  - STP – Stop
  - STL – Stop Limit
- Liquidity Enhanced: Number of Contracts/Shares on Eligible Orders that Executed greater than Market Volume
- Liquidity Diminished: Number of Contracts/Shares on Eligible Orders that did NOT execute when sufficient Market Volume available
- Execution Efficiency: Total Eligible Contracts/Shares Executed “At or Better” than the Target Quote, Divided by the Lesser of the # of Contracts/Shares Ordered or the Market Volume
- Mkt Availability – Signifies if sufficient liquidity in the market at time of order placement
  - Y – Yes, there was sufficient liquidity
  - N – No, there was not sufficient liquidity
  - N/A = Could not determine liquidity

#### APPENDIX O: MISSED FILLS REPORT FILTERS

- Date – Date of ‘Missed Fill’
- Order Level – Order Level of exception (Parent or Route)
- Order Type
  - MKT – Market
  - LMT – Limit
  - MKL – Marketable Limit

- STP – Stop
  - STL – Stop Limit
- Order Side – Buy or Sell
- Order Status
  - O – Open
  - F – Filled
  - P – Partial Fill
  - C – Canceled
  - RJ – Rejected
  - X – Expired
  - CR – Cancel Replace
  - M – Manual
- Entry Firm – Firm which parent order was received from or into
- Order/Exception Date
  - All – Exception Date not a factor
  - Same – Exception Date was same day as order date
  - Different – Exception Date was different than order date
- Covered Orders – Exclude or Include 605 covered orders
- Listing Exchange – Exchange with security is primarily listed
- Scenario
  - All – Order Level not a factor
  - Order Level – Only show exceptions for order level specified
  - Both – Only show exceptions for misses that missed at both the parent and route order levels

## APPENDIX P: TRADE SUEVILLANCE EXCEPTIONS COLUMNS

- Date – Date of the Exception
- Exception Type – Type of Exception Reported
  - Spoofing - Spoofing occurs when a layer event has been triggered and there is a trade on the opposite side of the market within a set number of seconds
  - Layering - Layering exception will look for orders placed off the NBBO that are within a set number of ticks of the NBBO. The goal is to look for the appearance of interest on one side of the market when there is no intention to trade on that side of the market.
  - Marking the Close
    - Client volume in close period is more than x% of market volume in the same period.
    - Client volume in close period is more than x% of the total client volume for the day.
  - Trade Through - Scan all NBBO quotes within a set number of seconds before and after the trade. If there is no quote at the trade price generate an exception.
  - Reg SHO - Check all symbols in REG SHO state (list curated from listing exchange). If a short sell trades at less than or equal to the NBBO bid price, generate an exception.
  - Equity-Options manipulation (“Mini-manipulation”)
  - Wash Sales/Trades - Buying or Selling of a position among related accounts where the net position size does not change even with a lot of trading activity.
    - Example: Account A has a ‘500 share’ position in AAPL. Account B is controlled by the same household as Account A. Account A sells 500 shares of AAPL and at the same time Account B buys 500 shares of AAPL at an extremely similar price. This report allows you to configure how close the prices need to be to trigger a Wash Sales exception.

- Blocking – A Blocking exception is generated when a large order of a set size is entered on the opposite side of the market off the NBBO and when an execution on the other side of the market occurs, the large order is removed.
- Limit Price Violations (Rule 612)
  - Verify that all limit orders placed conform to the minimum price increment rules (no sub penny increments in stocks above 1.00).
  - Verify all sub penny increments orders are below 1.00.
- Erroneous Order Quantity – Exception occurs when order quantity is an order of magnitude above a normal order
- Erroneous Order Price – Exception occurs when the price of an order is an order of magnitude higher or lower than expected. (Example \$100 limit price on a \$10 stock).
- Duplicative Orders - Orders that are coming in at a high frequency from a specific trader that appear to be exact duplicates. For these exceptions we look for a set number of orders from the same trader with the same instructions and price over a short period of time.
- Manipulating the Underlying - Buying or selling the underlying security in an effort to improve the price of a preexisting option position. These exceptions look for aggressive buying and selling of the underlying security and the initiation or exiting of the related option position. It also checks to see if the underlying position is exited when there is little net impact to that position in relation to the option transaction.
- High Trade Activity - Buying and selling a large amount of a security with no net position carried over. Exceptions are generated in instances where a lot of trading activity is occurring with little economic incentive. For exception to occur, there must be a high % of daily average volume for that security and the total volume of security is some percent significantly higher than the average daily volume.
- 1% Market Maker – In cataloging and classifying all order flow, exception occurs when the entity involved does not follow the 1% market maker rule and publicly disseminates quotes for a given security.
- Security Type
  - Equities
  - Options
  - Futures
- Order Account ID – Client Account ID of the Order with the Exception. Only visible when you ‘Group By’ Order Account ID.
- Symbol – Symbol of the traded security. Only visible when you ‘Group By’ Symbol.
- Household ID – Client Household ID of the Order with the Exception. Only visible when you ‘Group By’ Household ID.
- #Exceptions – Total number of exceptions for listed Exceptions Type
- Resolved – Total number of exceptions that have been marked ‘Resolved’
- Unresolved – Total number of exceptions that have NOT been marked ‘Resolved’
