Seamless Corporate Communication and Collaboration

TrueConf connects workplaces, employees' mobile devices, and meeting rooms with secure video communication, chat and convenient collaboration tools.

TrueConf is a leading developer of security-focused software and hardware designed to enhance remote teamwork and protect confidential data of businesses and organizations. The company was repeatedly recognized by reputed analytical agencies, such as Gartner, IDC, and Frost & Sullivan.

Our Projects

Rosatom State Corporation Engineering Division

 Russia  Business & Industry  1,500 engineers

One of the world's largest companies in the construction of high-capacity nuclear power plants. The TrueConf Server Unified Communication platform unites more than 1,500 employees who conduct hybrid and online work meetings both within Russia and abroad — in Bangladesh, Egypt, Hungary, and other countries.

Hindustan Aeronautics Limited

 India  Business & Industry  30,000 employees

TrueConf Enterprise helped HAL to create a private collaboration cloud that enables more than 30,000 employees to communicate from any device. With TrueConf, the company fosters greater collaboration, communication, and engagement, ultimately contributing to its overall success.

Gazprom Neft

 Russia  Business & Industry  60,000 users

TrueConf Enterprise enabled one of the largest global oil companies to establish a large-scale corporate communications network. The solution unifies over 60,000 employees in 140 subsidiaries across the country.

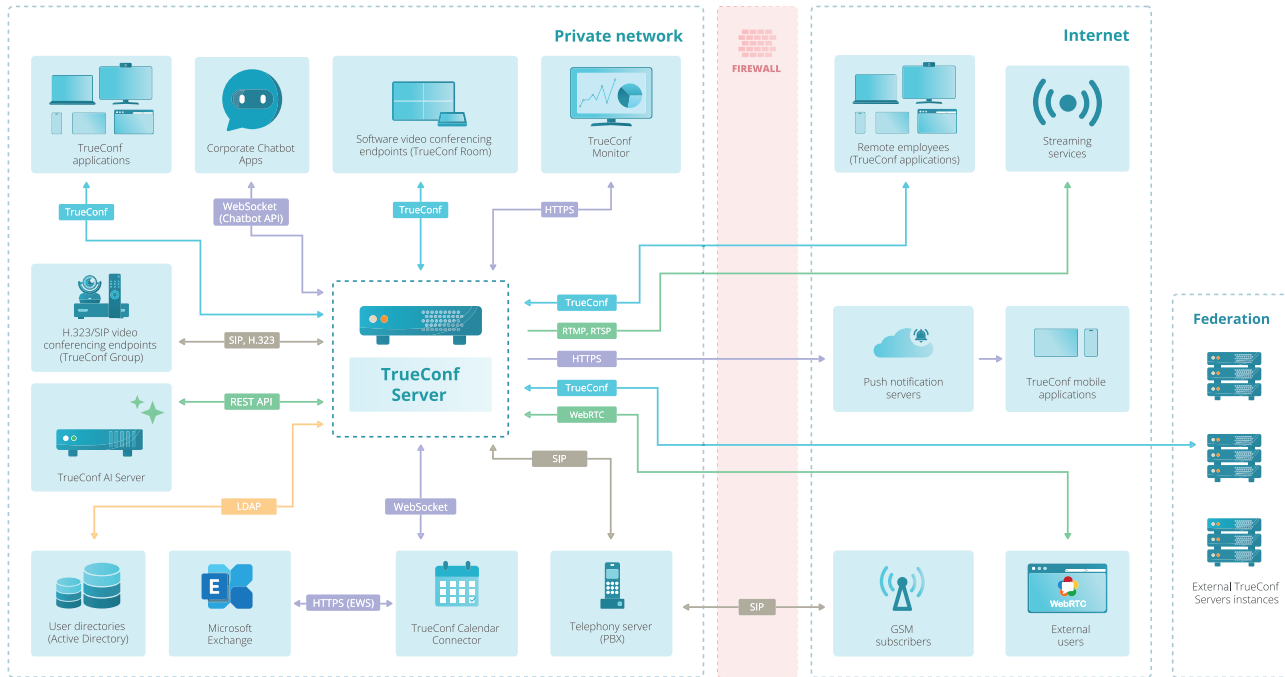

TrueConf Server

A self-hosted platform for your corporate communications, based on the advanced architecture, with support for UltraHD video conferencing, built-in messenger with personal and group chats, and a **free version for up to 1,000 users**.

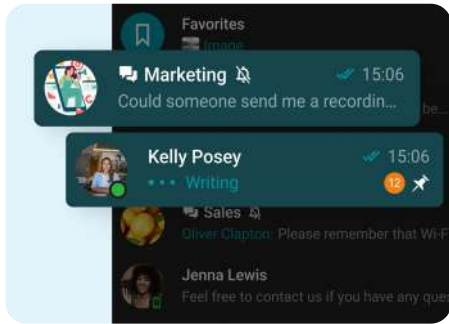

TrueConf Server Operation Scheme

Corporate messenger

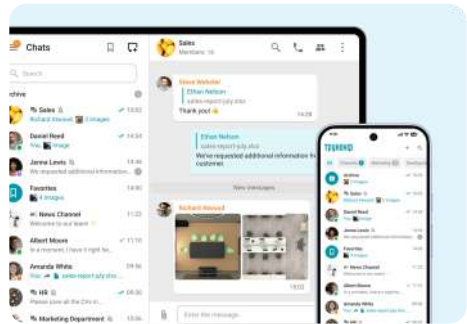

Group and Private Chats

Organize all communication in one app: easily find colleagues, create team and project chats, and exchange files without limits.

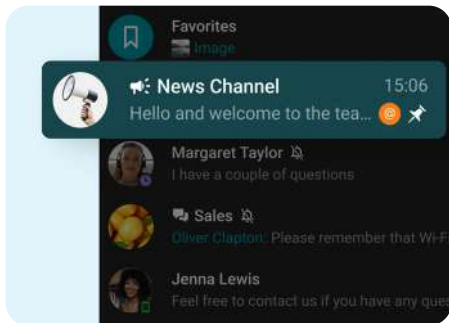

Data Synchronization

Communicate with colleagues from the workplace, from home, or from mobile devices — chats and drafts are synchronized automatically.

Channels

Publish important news, notifications, event announcements, and other useful information in corporate channels.

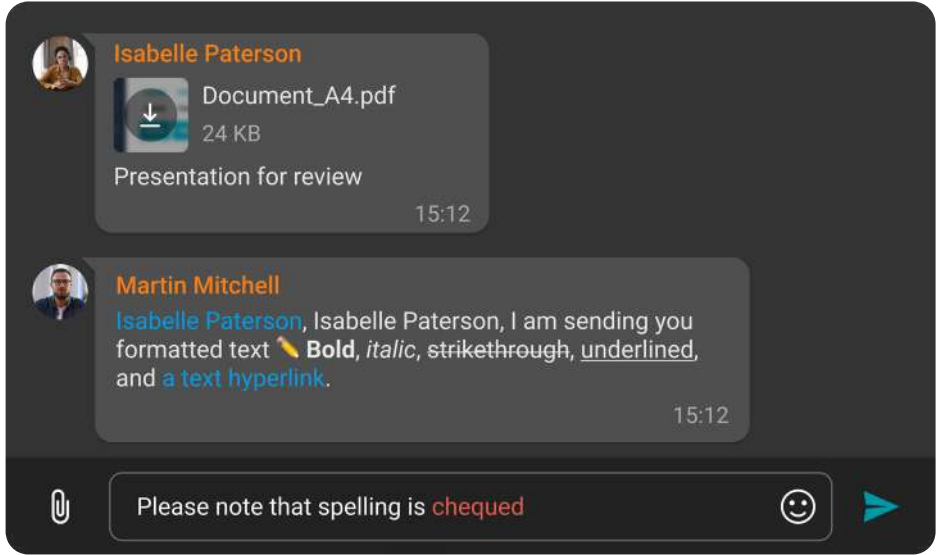

File sharing without limits

Transfer files of any size instantly and seamlessly across your entire organization and between branch offices.

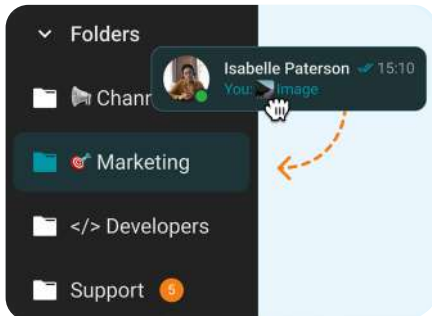

Formatting and Spell Check

Add emphasis, style your messages, and avoid errors with built-in text formatting and spell checking tools.

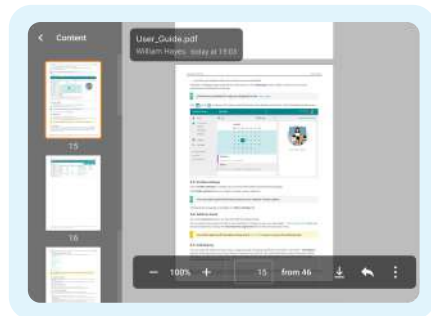

Organize Chats with Folders

Categorize work conversations into thematic folders for quick access to relevant discussions and better focus on priority tasks.

Media Files and Documents Preview

View documents and media files directly within TrueConf applications.

Unified Communications

Secure Communication

TrueConf Server is deployed autonomously within your corporate network, which guarantees security and full control over all communications.

Conferences with up to 2,000 Participants

TrueConf solutions make it easy to hold large conferences with hundreds or even thousands of participants.

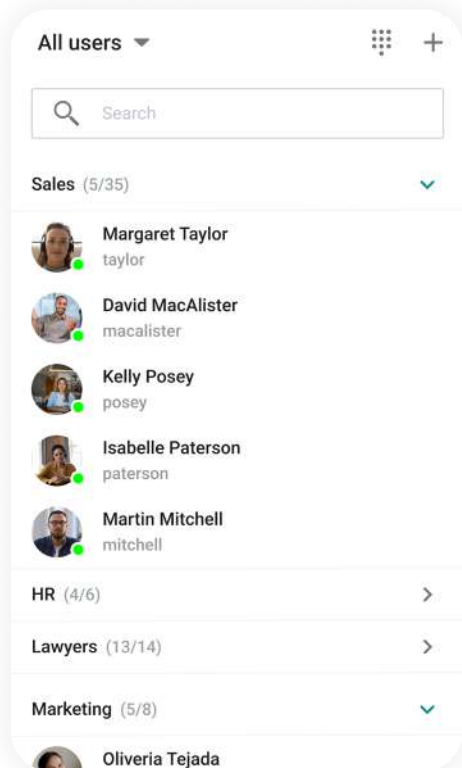

Simultaneous Interpretation

Host international events with speakers from different countries and multiple simultaneous interpreters.

Address Book

It unites all employees of the organization, allowing you to see colleagues' statuses, make calls and create conferences *on the fly*.

Presence Statuses

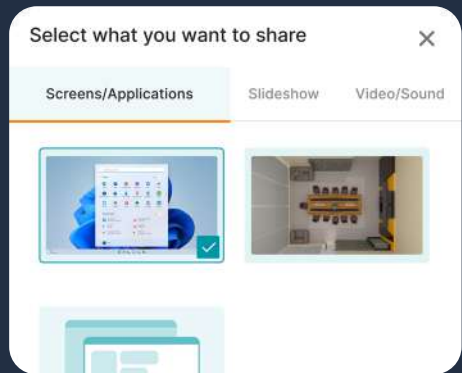

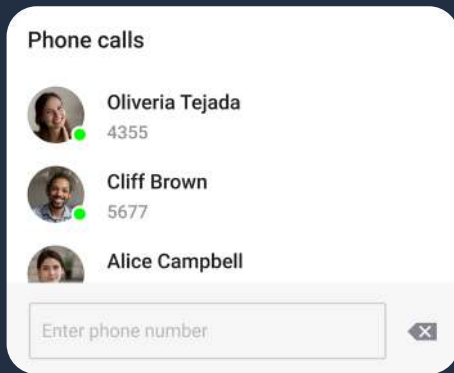

Telephony and PBX

Call PBX users, external subscribers, or VoIP devices registered on TrueConf Servers and invite them to video conferences.

Collaboration Tools

Share screens, application windows, and presentations, show content and videos with audio, and remotely control the desktops of other meeting participants.

Conference Timekeeper

The Timekeeper makes presentations easier by handling the speaking order, keeping track of time, and helping everyone stay on schedule.

Scaling and Integration

Integration with Active Directory

Connect Active Directory or any LDAP directory to TrueConf Server: users and groups information will be synchronized automatically.

Corporate Calendars

Thanks to the integration with Microsoft® Outlook, Microsoft® Exchange and Mozilla® Thunderbird, users can add a video conference to any event in the corporate calendar.

Seamless Authorization

TrueConf supports single sign-on technology (SSO), corporate identity providers (like AD FS), and flexible configuration of trusted zones. These features will allow administrators to implement various scenarios, including multi-factor authentication.

Federation

Combine multiple video conferencing servers into a single system that will enable employees from different branch offices to collaborate effectively with one another.

Video Conference Streaming

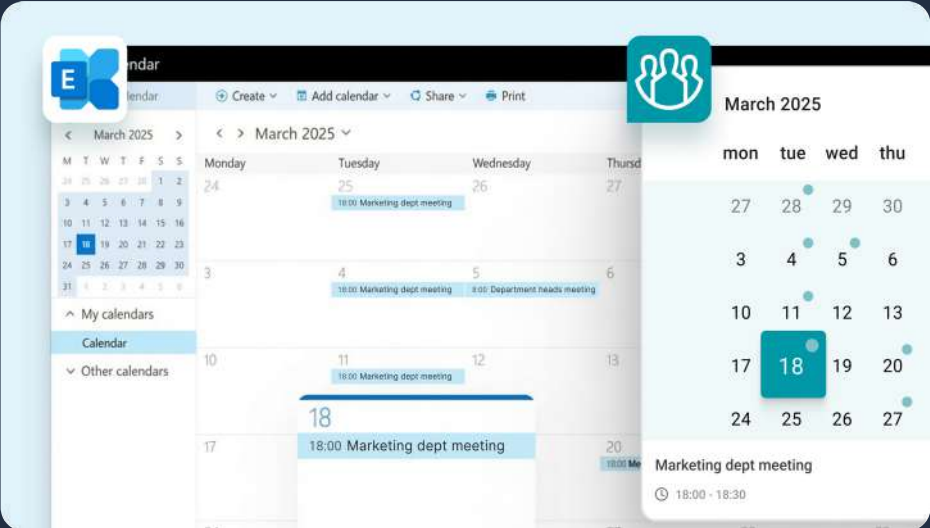

Reach millions of viewers by streaming on third-party platforms and CDN services.

Compatible with Video Conferencing Devices

Full integration with MCU servers and video conferencing endpoints, including third-party ones via SIP and H.323 protocols.

Microsoft® Exchange Integration

View all your Outlook events in TrueConf client applications and schedule video conferences directly from your mail calendar.

Automatic event synchronization between Outlook and TrueConf applications across all your devices

Schedule video meetings directly from your mail calendar, based on employee availability

Synchronization of the event attendee list

One-time and repeating events

Advanced Features Based on **AI** Technologies

Background Blurring

Background Blurring provides conference participants with additional privacy during video meetings.

Virtual Background

Set any image or video as your virtual background using the background replacement tool.

Interactive Presentations

Make your presentation more interactive by replacing the real background with a slideshow or shared content.

Advanced Features Based on **AI** Technologies

Conference Transcription

A smart algorithm transforms meeting recordings into detailed, speaker-segmented transcripts with timecodes.

TrueConf AI Server
Conference transcription

Jenna Lewis
00:01:15 Colleagues! We are very close to the project deadline, but there are still outstanding requirements.

Steve Webster
00:01:16 We'll do everything possible.

Jenna Lewis
00:01:19 At the moment 7 requirements remain outstanding – please hurry.

Steve Webster
00:00:20 Okay, is the release date already confirmed?

Jenna Lewis
00:01:26 We plan it for early November.

Michael Townsend
00:01:35 That means we should meet the deadline.

01:42:01 02:13:54

Conference transcription

Medium EN X Long EN Short EN +

1. Jenna Lewis reported that the project deadline is approaching, but there are still outstanding requirements.
2. Steve Webster promised to do everything possible to meet the deadline.
3. Jenna Lewis asked the teams to speed up, as there were currently 7 outstanding requirements.
4. Steve Webster announced the product release is scheduled for November.

Smart Noise Suppression

The AI-based noise suppression will eliminate external noises and help meeting participants to stay focused on their discussion.

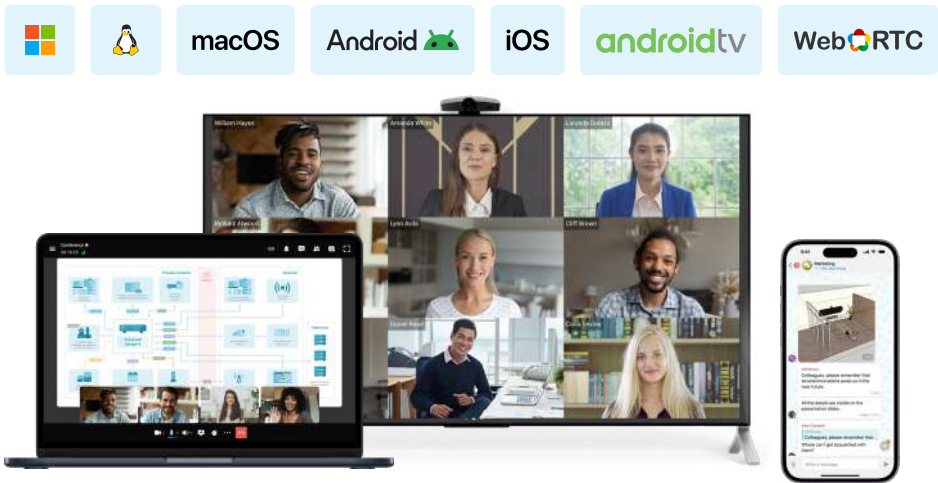

Face Tracking

An artificial intelligence-based algorithm analyzes the camera video, detects users' faces, and keeps them in the center of the frame.

Remote Collaboration

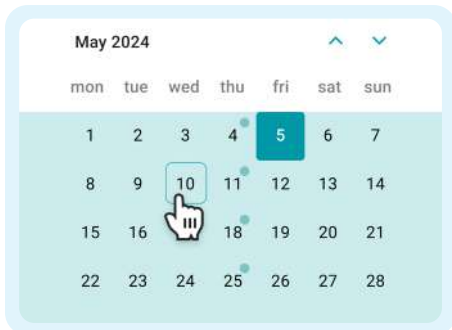

Always in Touch

Stay connected on multiple devices, participate in video meetings, and chat wherever you are, including from meeting rooms.

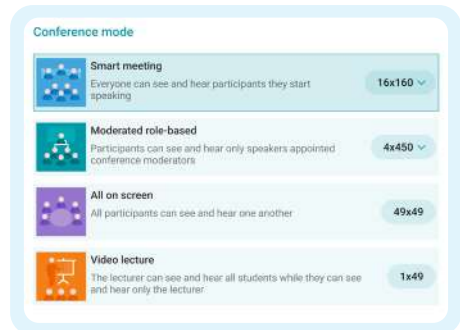

Meeting Scheduler

Seamlessly sync all events with Microsoft Exchange. Whether scheduling via TrueConf built-in scheduler or your corporate calendar, integration is flawless — no missed events.

Any Meeting Scenario

With various conference modes, you can hold online lessons, webinars and moderated role-based meetings.

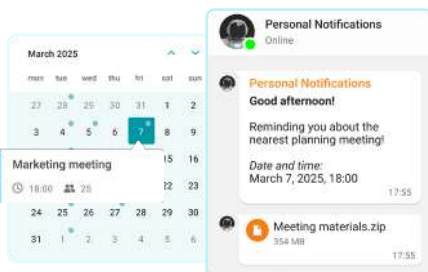

TrueConf Chatbot Connector

A new solution for creating multi-purpose chatbots

Chatbots easily integrate with any external or corporate IT systems to optimize workflows.

Create your own bots for any scenario with ready-made libraries.

Auto-sending messages to chats

Onboarding and HR notifications

Messenger integration with your company's information systems

Moderation of group chats

IT systems monitoring

Integration with GPT models

Smart office automation

ERP systems integration

TrueConf SDK

Integrate video conferencing into your desktops or self-service kiosks by using a specialized developer toolkit.

Native support for most popular IDEs

Python

TrueConf Enterprise

Distributed Conferences

Automatic distribution of media streams between the nodes of the video conferencing network significantly reduces the load on communication channels between branch offices and ensures that participants connect to the nearest server.

Disaster Tolerance

The risk of unavailability is reduced to zero because video conferencing nodes can be duplicated and geographically distributed.

Fault Tolerance

The unique architecture of the solution offers high fault tolerance with backup clusters and seamless switching between them if one node fails.

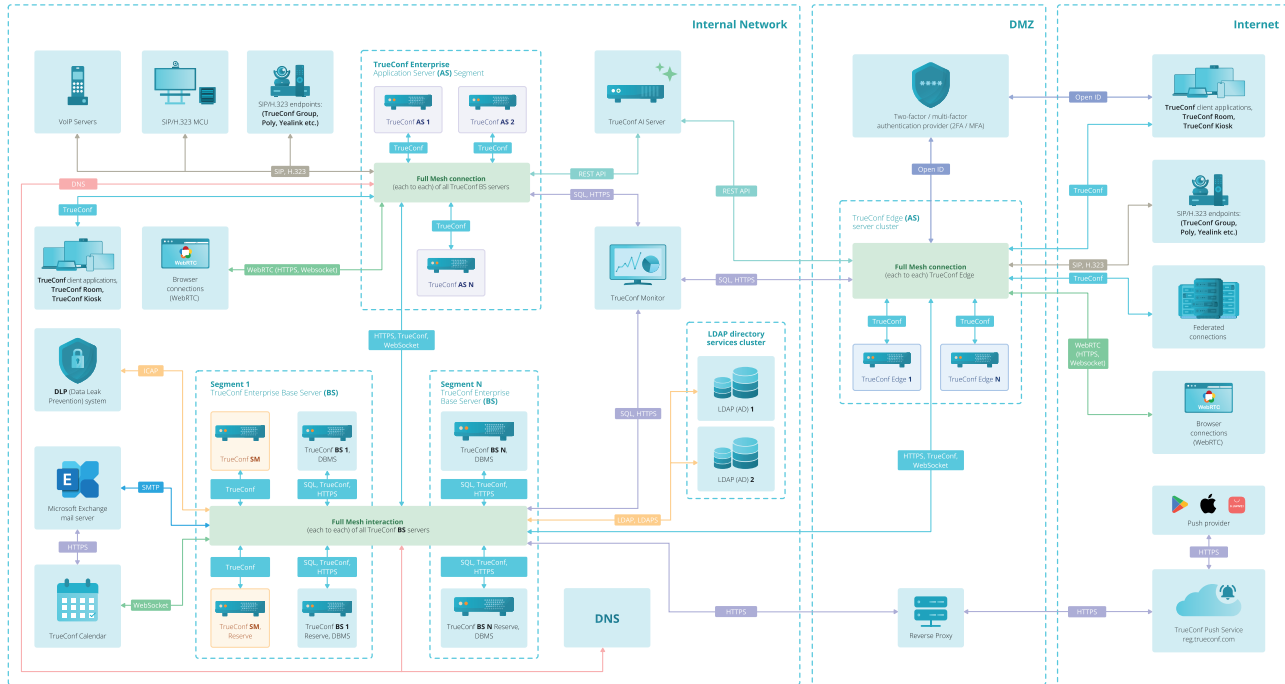

Load Balancing

Connecting additional nodes not only balances the load within the corporate network but also improves the quality of communication in group video conferences.

TrueConf Enterprise Operation Scheme

A scalable video conferencing solution for enterprises, telecom operators, and organizations with extensive regional structures, supporting up to one million users.

TrueConf Enterprise

Global Address Space

TrueConf Directory extension allows access to the global address book with information about users and user groups from external servers directly through client applications.

Automatic License Allocation

TrueConf License Manager extension automatically distributes licenses among video conferencing servers of your organization based on their current needs and established restrictions.

Protection Against Data Leaks

Integrate your video conferencing server with a data leakage protection system (DLP) to block unauthorized transfer of information according to the configured filters.

Border Controller

Hide the real IP address of your video conferencing system and restrict access from unwanted external connections by using the session border controller.

Secure Video Communications

Encryption

TrueConf provides multi-level protection by using advanced encryption algorithms for all supported communication protocols, along with integration with popular cryptographic VPN gateways.

Trusted Zones

Configure different authentication methods for users within a trusted group of IP addresses and for external users from the Internet.

PIN-Protected Meetings

Set a PIN code to secure a public conference that can be joined via a link. You can also lock the conference for new participants at any time.

On-premises Deployment

The video conferencing system operates within a corporate network without an Internet connection, processing and storing data in your company's infrastructure.

Private Conferences

Create internal conferences accessible only to authorized or federated users.

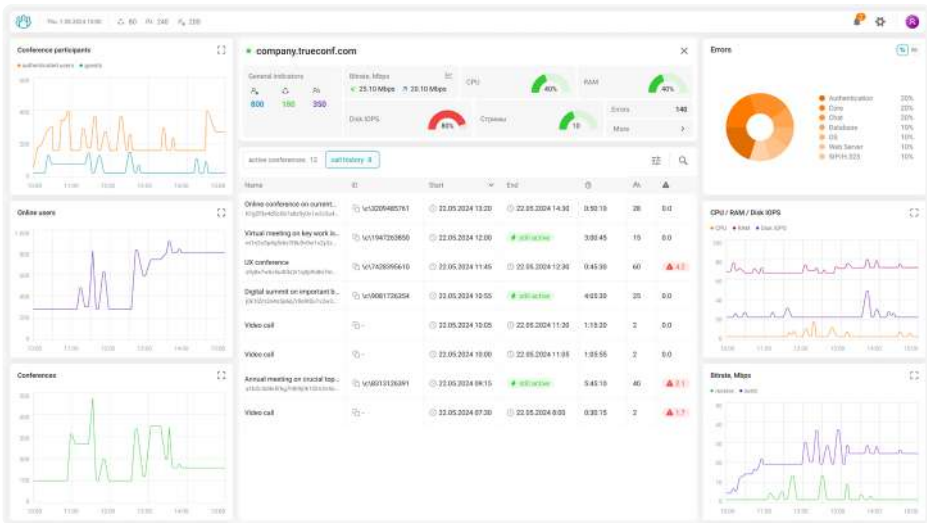

Flexible Configuration of Group Policies

Add users and administrators to groups, and configure their access to necessary features based on security requirements.

Monitoring and Analytics

TrueConf Monitor is an essential administrator's tool that provides detailed statistics on video conferences, users and connections. It enables you to quickly troubleshoot issues, analyze past events, and maintain the stable operation of your videoconferencing systems.

Real-time and post-conference troubleshooting and analysis

Video conferencing service quality monitoring

Quick troubleshooting for users

TrueConf Server key parameters monitoring

Detailed performance data for each node

Infrastructure network and system issue detection

TrueConf AI Server

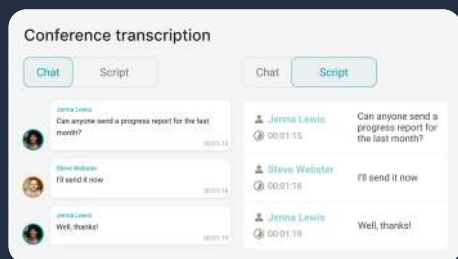

A conference transcription server is deployed within your corporate network to securely process data without the risk of leaks.

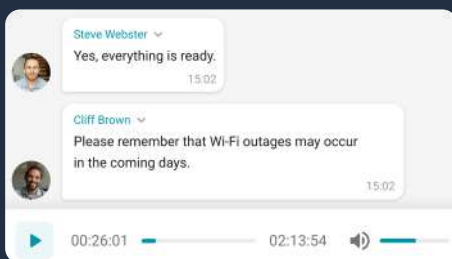

A smart algorithm captures every detail of the discussion

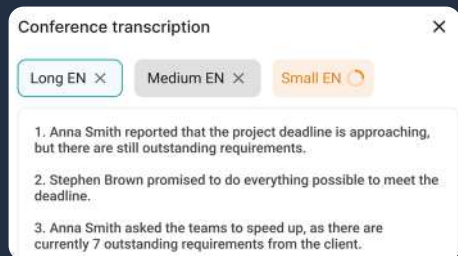

Detailed conference transcription with speakers' names included

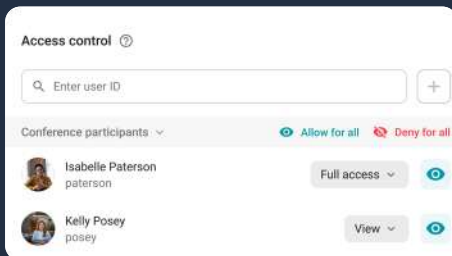

Multiple transcript display options and export tools

Built-in player for navigation and playback of searched phrases

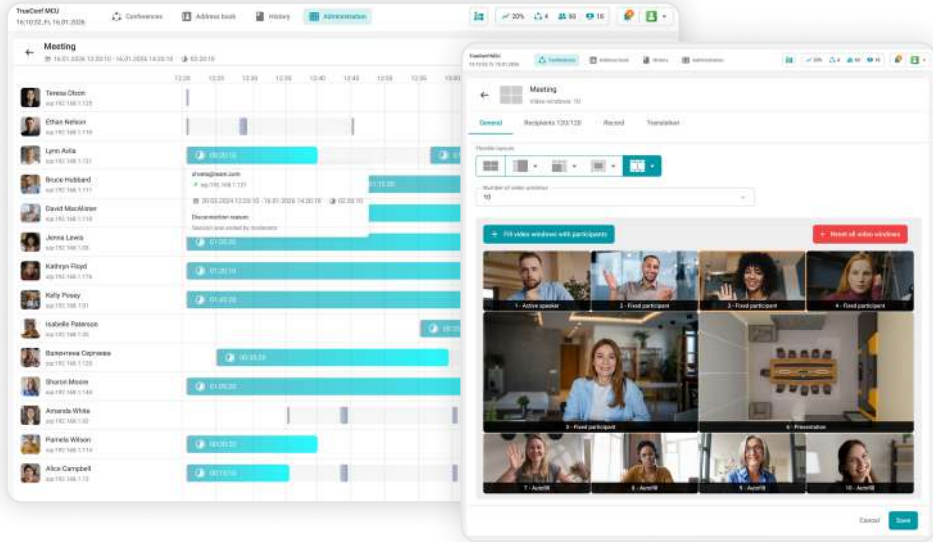

The conference summary and meeting minutes will help you quickly identify the main points

Shared access to conference transcripts

TrueConf MCU

A transcoding server for SIP and H.323 video conferencing endpoints, offering extensive conference management capabilities for **up to 100 connections in the free version**.

Up to 250 participants in one conference

A set of layouts for any scenario, with support for a second content stream

Support for content sharing and remote camera control

Recording multiple layouts of a conference at the same time

Detailed conference history with information about user activity

Monitoring and reserving server resources

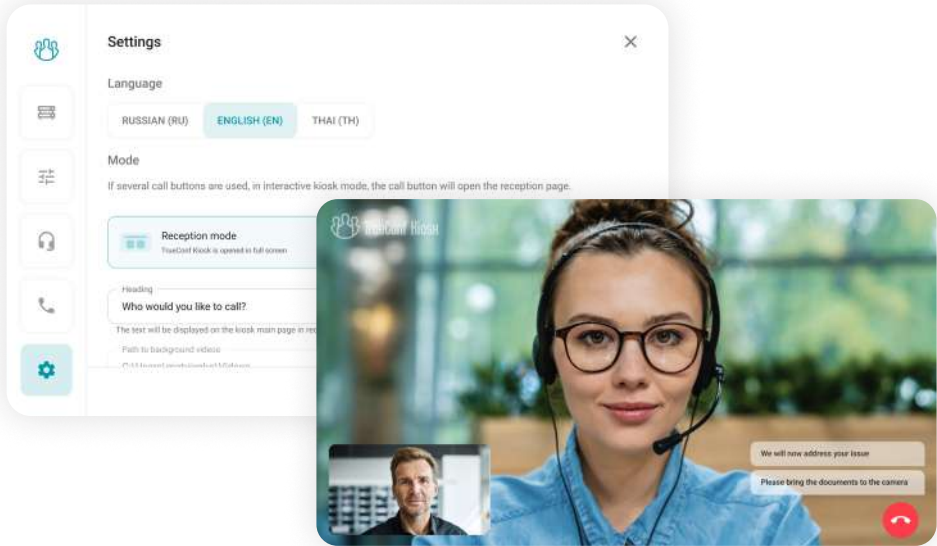

Network load optimization on weak communication channels

High video quality even with up to 10% of lost network packets

TrueConf Kiosk

A turnkey solution that enables the implementation of advanced video conferencing capabilities in information kiosks for remote customer service.

Various types of calls, including calling the first available operator

FullHD video calls with dynamic adjustment to the communication channel

Showing of images, videos and slides

Integration with printers for fast file printing

Automatic recording of video sessions

Integration with contact centers via SIP

UI customization and branding

Full support for document cameras

TrueConf Room

PC-based software for organizing 4K video conferencing in meeting rooms and conference halls.

You can control the application with a smartphone, tablet, touchpad or from a browser

Supports up to four screens with multi-window mode and active speaker "pinning"

Meeting participants can share their screens and slideshows in multiple ways, for example, via HDMI or wirelessly via AirPlay

Compatible with any USB peripherals

Easy switching between cameras and convenient export of video streams thanks to the support of the low-latency NDI protocol

Integration with corporate PBXs and video conferencing endpoints

TrueConf Group

A video conferencing endpoint designed for medium and large meeting rooms, with native support for SIP and H.323 protocols.

Built-in MCU for up to 8 FullHD connections

Output to two screens and capture up to two HDMI sources

Sharing content and media files

Control with an IR remote, command line, or web interface

Streaming conferences and adding NDI-compatible devices

Multi-level security system, including protection against DDoS attacks

Address book synchronization with TrueConf **Server** and TrueConf **MCU**

Easily integrates with meeting room management systems

Technical Specifications

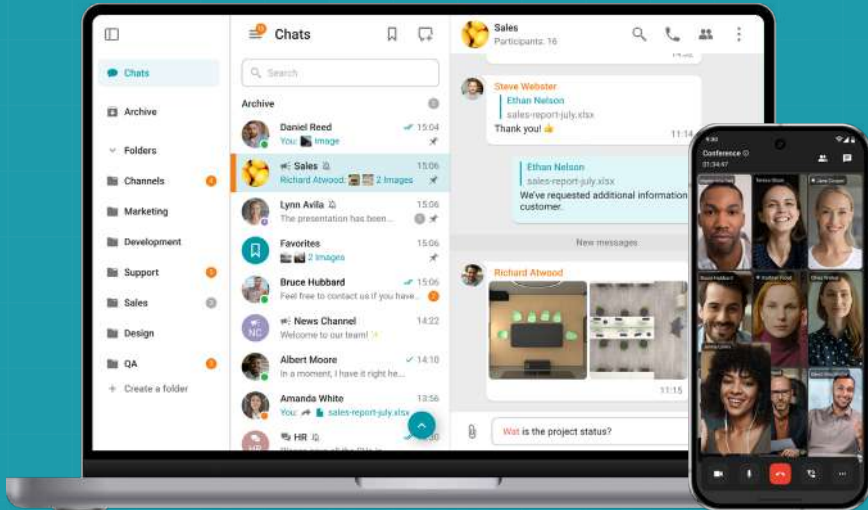

Applications	Client applications are available for Windows, macOS, Arch, Debian, Red Hat Enterprise Linux, CentOS, Fedora, Mint, openSUSE, Ubuntu, Android, Android TV, iOS/iPadOS and WebRTC.
Video Codecs	VP8 SVC, H.264 AVC, H.264 SVC, Microsoft® X-H264UC, H.263, H.261, AV1. Video resolution, compression ratio, and frame rate are dynamically and independently selected for each conference participant, based on the chosen layout, channel bandwidth, connection quality, and hardware capabilities of the endpoint device.
Layouts	Users can change the layout in an infinite number of ways or drag video windows to other screens. The moderator can change the layout for client applications and hardware endpoints in real time.
Video Resolution	Point-to-point video call: up to 2160p (4K) at 30 fps and up to 1440p at 60 fps. Multipoint conference: up to 1080p (FullHD) at 30 fps per participant and up to 4320p (8K) per layout. Via built-in H.323/SIP gateway: up to 1080p at 30 fps per layout.
Content Resolution	Desktop and application sharing: up to 2160p with remote control available. Slideshow: up to 1920x1080 per slide.
Audio Codec	Opus Wideband HD Audio, Speex, G7xx, MP3, AAC, PCM.
Protocols	Secure proprietary TrueConf protocol as well as WebRTC, H.323, BFCP, H.239, SRTP, DTLS, RTSP, H.235, RTMP, HTTP(S), TLS, FECC, H.224, H.281, Dante, NDI, VNC, LDAP, ICAP, CalDAV, WebSocket.
Encryption	AES-256, TLS. Via WebRTC: SRTP DTLS. Via SIP: SRTP. Via H.323: H.235 rev.3.
Network	IPv4 and IPv6. NAT traversal via TURN, ICE and STUN. TrueConf Border Controller.
Bandwidth Requirements	2160p30 @ 8192 kbps, 1440p60 @ 4096 kbps, 720p60 @ 2048 kbps, 1080p30 @ 2048 kbps, 720p30 @ 1024 kbps, 480p30 @ 512 kbps, 360p30 @ 128 kbps, 180p30 @ 48 kbps.
API & SDK	RESTful API for TrueConf Server and TrueConf MCU; WebSocket API for TrueConf Room; SSH, Rest API and gRPC API for TrueConf Group; Mobile and Desktops SDKs for developing corporate apps with UC features.
SSO and MFA	Single sign-on is available via NTLM and Kerberos. Multi-factor authentication is available via AD FS, Keycloak (using a one-time password, SMS and email) and the OpenID Connect protocol.
Supported Hypervisors	Microsoft® Hyper-V, Xen, KVM, Oracle® VM VirtualBox, VMware® Workstation and ESXi. The distribution is also available as a Docker container (hub.docker.com/u/truconf).
VDI Support	Citrix® VDI, VMware® Horizon. Various optimization profiles are available for VDI environments.
Data Leak Prevention	Integration with major DLP systems via ICAP.
Hybrid Deployment	Hybrid usage scenarios are available as federation between on-premises and cloud TrueConf solutions.
Tools for Developers	TrueConf VideoSDK for desktop systems, TrueConf SDK for iOS and Android. More information on developers.truconf.com .
System Requirements	<p>For TrueConf Server: Debian, CentOS or Microsoft® Windows Server 2012 or later, Intel® Core i3-8100 CPU, Xeon® E3-2234 or better with PassMark score higher than 7000, 16 GB RAM, 20 GB on SSD, Ethernet 1 Gbps. The built-in H.323/SIP gateway requires additional system resources for each unique layout, regardless of the number of conference participants. One logical or virtual CPU core is usually needed to display the layout for an SIP/H.323 device in 720p resolution.</p> <p>GPU encoding acceleration is available for NVIDIA® Pascal graphics cards or later. For example, NVIDIA® Quadro P2000 can support up to 20 individual H.323/SIP layouts with resolutions up to 720p.</p> <p>For TrueConf AI Server: Debian 11, Intel(R) Core(TM) i5-11400 (6 cores) or equal, NVIDIA RTX A4000 16 GB or better, RAM min 16 GB (32 GB is recommended), SSD min 512 GB, the size generally depends on how long data has to be stored.</p> <p>For desktop client applications: Microsoft® Windows 7+, Apple® macOS 10.12+, Linux*. For video calls in 2160p: Intel® Core i5-8600 or later, plus NVIDIA® GTX 1050 GPU. For video calls in 1080p30: Intel® Core i5 5th generation; for 720p30: Intel® Core i5 2nd generation; for 480p 30: Intel® Core i3 2nd generation; for 360p: Intel® Celeron (Haswell) is enough.</p> <p>For mobile devices: tablets and smartphones running Android 7+ and iOS/iPadOS 15+.</p> <p>For Smart TV: Android TV 7+, NVIDIA® SHIELD TV, Xiaomi MiBox 4/S, and various models of TVs running Android.</p> <p>* Arch, Debian 8+, Red Hat Enterprise Linux 8, CentOS 7+, CentOS Stream 8+, Fedora 28+, Mint 18+, openSUSE 15.0+, Ubuntu 16.04+.</p>
